Contents

Contributors Preface	ix xi
•	1
Some Ideas in Computational Probability Ulf Grenander	1
Computational Problems Related to the Galton-Watson Process Marcel F. Neuts	11
Central Limit Analogues for Markov Population Processes Donald R. McNeil and Siegfried Schach	39
The Stochastic Nature of Pension Costs	71
Arnold F. Shapiro	
An Approximation Method to Calculate the Value of a Maturity Guarantee under a Level-Premium Equity-Based Contract	91
Phelim Paul Boyle	
Efficient Sorting by Computer: An Introduction Robert Sedgewick	101
Symbolic Information Processing	131
Kenneth M. Levine and Peter Masters	
APL for Actuaries Donald L. Orth	155
Backward Population Projection by a Generalized Inverse T. N. E. Greville and Nathan Keyfitz	173
Accounting Principles for Life Insurance: Reflections on Language and Notation	185
Gottfried Berger	
Reversionary Annuities as Applied to the Evaluation of Law Amendment Factors	231

viii	CONTENTS
viii	CONTENTS

Nonlife Business and Inflation	249
Harald Bohman	
Numerical Fourier Inversion Harald Bohman	257
Some Practical Considerations in Connection with the Calculation of Stop-Loss Premiums Hans U. Gerber and Donald A. Jones	261
Simulation of a Multirisk Collective Model John A. Beekman and Clinton P. Fuelling	287
Experimental Computation Richard Vitale	303
Partitioning for Homogeneity Donald E. McClure	311
Correlates of Life Insurance Lapsation J. R. Brzezinski	325
Some Practical Notes about Solving the Lundberg Risk Equation Nils Wikstad	337
