

Table of Contents

10 On principal values of Brownian and Bessel local times	1
10.1 Yamada's formulae	2
10.2 A construction of stable processes	4
10.3 Distributions of principal values of Brownian local times, taken at an independent exponential time	5
10.4 Bertoin's excursion theory for BES(d), $0 < d < 1$	6
Comments on Chapter 10	9
11 Probabilistic representations of the Riemann zeta function	11
11.1 The Riemann zeta function and the 3-dimensional Bessel process	11
11.2 The agreement formulae	14
11.3 A discussion of the identity (11.8)	16
11.4 A strengthening of Knight's identity	19
11.5 Another probabilistic representation of the Riemann zeta function	22
11.6 Some generalizations related to Bessel processes	22
11.7 Some relations between X^ν and $\Sigma^{\nu-1} \equiv \sigma_{\nu-1} + \sigma'_{\nu-1}$	26
11.8 $\zeta^\nu(s)$ as a function of ν	29
Comments on Chapter 11	31
12 Some examples and applications of enlargements of filtrations	32
12.1 Initial enlargements	33
12.2 Progressive enlargements	41
12.3 Applications to some path decompositions	43
Comments on Chapter 12	49
13 Martingale inequalities at any time	51
13.1 A global extension of the BG inequalities	51
13.2 An application to Brownian motion with dimension n increasing to infinity	55
13.3 A finer extension of the BG inequalities	56
13.4 The role of BMO in some inequalities	58
Comments on Chapter 13	60

14 On the martingales which vanish on the set of Brownian zeroes	61
14.1 Preliminaries and some applications of the balayage formula	62
14.2 A characterization of the elements of \mathcal{M}_1^0	66
14.3 The resolution of some conditional equations	73
14.4 Some Brownian martingales with a given local time, or supremum process	76
Comments on Chapter 14	78
15 On Azéma's martingales and the chaos representation property	79
15.1 On Azéma's first and second martingales	79
15.2 Azéma's first martingale enjoys the chaos representation property	81
15.3 Some partial results about Azéma's second martingale	85
15.4 On Emery's martingales	87
Comments on Chapter 15	93
16 The filtration of truncated Brownian motion	94
16.1 The structure of $(\mathcal{F}_t^- = \mathcal{E}_t^0; t \geq 0)$ martingales	94
16.2 Some Markov Processes with respect to $(\mathcal{E}_\infty^a; a \geq 0)$	99
16.3 Some results on $(\mathcal{E}_\infty^a; a \in \mathbb{R})$ martingales	101
Comments on Chapter 16	102
17 The Brownian filtration, Tsirel'son's examples, and Walsh's Brownian motions	103
17.1 On probability measures locally equivalent to Wiener measure	104
17.2 Walsh's Brownian motions and spider-martingales	107
17.3 Some examples of loss of information for Brownian motion	114
Comments on Chapter 17	122
Epilogue to Chapter 17	123
18 Complements relative to Part I (Chapters 1 to 9)	124
18.0 Some misprints	124
18.1 On Chapter 1	125
18.2 On Chapter 2	126
18.3 On Chapter 3	127
18.4 On Chapter 6	128
18.5 On Chapters 8 and 9	129
18.6 Brownian motion and hyperbolic functions	132
Bibliography	135
Index	142
