

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	An Overview . . . . .	1
1.2	Dynamics of Queuing Systems . . . . .	8
1.3	A Two-Server Cyclic Queuing Network . . . . .	12
<b>2</b>	<b>Mathematical Background</b>	<b>21</b>
2.1	Probability Theory . . . . .	21
2.1.1	The Elementary Concepts . . . . .	21
2.1.2	Some Facts and Theorems . . . . .	31
2.2	Stochastic Processes . . . . .	39
2.2.1	Markov Chains . . . . .	39
2.2.2	Markov Processes . . . . .	45
2.2.3	Semi-Markov Processes . . . . .	50
2.2.4	Regenerative Processes . . . . .	51
2.2.5	Point Processes . . . . .	53
2.3	Queuing Systems . . . . .	59
2.3.1	The Single-Station Queue . . . . .	59
2.3.2	Queuing Networks . . . . .	64
2.4	Linear Differential Equations . . . . .	71
<b>3</b>	<b>Realization Probabilities in Closed Jackson Networks</b>	<b>75</b>
3.1	The Markov Process Model . . . . .	75
3.2	Realization Probabilities . . . . .	79
3.2.1	The Evolution of a Perturbation on a Sample Path . . . . .	79
3.2.2	Realization Probabilities . . . . .	83
3.3	Sample Sensitivities . . . . .	88
3.3.1	Sample Performance Functions and Their Derivatives . . . . .	88

3.3.2	Perturbations Due to Parameter Changes . . . . .	89
3.3.3	Calculation of Sample Derivatives of Throughputs . . . . .	93
3.4	Sensitivities of Steady-State Throughputs to Mean Service Times . . . . .	101
3.4.1	The Sample Performance Function $T_L(\bar{s}_v, \xi)$ . . . . .	101
3.4.2	Formulas for Steady-State Throughput Sensitivities . . . . .	103
3.5	Other Sensitivities . . . . .	109
3.5.1	Service Rates Change in a Set of States . . . . .	109
3.5.2	Sensitivities to the Number of Customers . . . . .	110
3.5.3	Sensitivities to Any Changes in Service Time Distributions . . . . .	111
<b>4</b>	<b>Realization Factors in State-Dependent Networks</b> . . . . .	<b>117</b>
4.1	Realization Factors and Their Equations . . . . .	118
4.1.1	Perturbation Evolution in State-Dependent Networks . . . . .	118
4.1.2	General Performance Measures and Realization Factors . . . . .	121
4.1.3	Equations for Realization Factors . . . . .	124
4.1.4	The Uniqueness of the Solutions . . . . .	129
4.2	Sensitivity Formulas for Closed Networks . . . . .	133
4.2.1	The Convergence of Sample Sensitivities . . . . .	133
4.2.2	Sensitivities of Steady-State Performance . . . . .	137
4.3	Linear Formulation of Performance Sensitivities . . . . .	141
4.3.1	System Dynamics Revisited . . . . .	141
4.3.2	The Sensitivity Matrix . . . . .	142
4.3.3	Reducing the Dimension . . . . .	148
4.4	Sensitivity Formulas for Open Networks . . . . .	153
4.4.1	Realization Factors for Open Networks . . . . .	153
4.4.2	Sensitivity Formulas . . . . .	155
4.4.3	The Sensitivities of an M/M/1 Queue . . . . .	160
4.4.4	The Quasi-Lipschitz Condition . . . . .	163
<b>5</b>	<b>Systems with General Distributions</b> . . . . .	<b>169</b>
5.1	Closed Networks . . . . .	169
5.1.1	The Network and Its Steady-State Probabilities . . . . .	169
5.1.2	Differential Equations for Realization Factors . . . . .	173
5.1.3	The Perturbation Generation Function . . . . .	177
5.1.4	Sample Derivatives . . . . .	180
5.1.5	Steady-State Sensitivity Formulas . . . . .	183
5.2	Open Networks . . . . .	189

<b>6</b>	<b>Multiclass Networks and Networks with Blocking</b>	<b>193</b>
6.1	Multiclass Networks . . . . .	194
6.1.1	Irreducible Multiclass Networks . . . . .	194
6.1.2	The Sensitivity Analysis . . . . .	205
6.2	Networks With Blocking . . . . .	211
6.2.1	Perturbation Propagation Through Blocking Periods	211
6.2.2	Perturbation Realization . . . . .	214
6.2.3	The Sensitivity Analysis . . . . .	219
6.3	The Interchangeability . . . . .	225
6.3.1	The Continuity of the Sample Functions . . . . .	227
6.3.2	A Necessary Condition for Multiclass Networks . . .	230
6.3.3	A Sufficient Condition for Networks With Blocking .	235
6.4	A Summary . . . . .	237
<b>7</b>	<b>Sensitivity Analysis of Generalized Semi-Markov Processes</b>	<b>241</b>
7.1	The Generalized Semi-Markov Processes . . . . .	242
7.2	Event Coupling in a GSMP . . . . .	244
7.2.1	The Classification of Event Coupling . . . . .	244
7.2.2	The Event Coupling Tree . . . . .	248
7.3	Sensitivity Analysis Based on Realization . . . . .	252
7.3.1	Realization Factors . . . . .	253
7.3.2	Sample Sensitivities . . . . .	255
7.3.3	Sensitivity of Steady-State Performance . . . . .	256
<b>8</b>	<b>Operational Sensitivity Analysis</b>	<b>259</b>
8.1	Operational Variables and Operational Assumptions . . . .	260
8.2	Operational Sensitivity Analysis . . . . .	264
8.2.1	Realization Ratios . . . . .	264
8.2.2	Operational Sensitivity Formulas . . . . .	270
<b>9</b>	<b>Explicit Formulas, Algorithms, and Applications to Opti- mization</b>	<b>275</b>
9.1	A Two-Server Cyclic Network . . . . .	277
9.2	Explicit Formulas for Load-Dependent Closed Jackson Net- works . . . . .	282
9.2.1	Norton's Aggregation for Sensitivities . . . . .	282
9.2.2	The Explicit Sensitivity formulas . . . . .	286
9.3	The Convolution Algorithm for the Sensitivities . . . . .	291
9.4	Decentralized Optimization of A Closed Jackson Network .	294
9.4.1	The Problem and the Solution . . . . .	294

9.4.2 The Proof of the Lemma . . . . .	297
<b>Bibliography</b>	<b>303</b>
<b>Selected Notations</b>	<b>313</b>
<b>Index</b>	<b>317</b>
