

TABLE OF CONTENTS

<i>Chapter 1 :</i>	General introduction to optimal stopping-time problems	1
1.	<i>Synopsis</i>	1
2.	<i>Formal description of stopping time problems</i>	1
3.	<i>Analytic characterisation by dynamic programming</i>	4
4.	<i>Examples of optimal stopping-time problems</i>	6
4.1	Bayesian formulation of a test problem	6
4.2	Modelling of a break-down phenomenon	8
4.3	A warrant-pricing problem	10
5.	<i>Optimal stopping-time problems and free boundary problems</i>	10
6.	<i>Generalisations</i>	15
7.	<i>Various characterisations of the optimal cost function</i>	18
<i>Chapter 2 :</i>	Stochastic differential equations and linear partial differential equations of second order	21
<i>Introduction</i>		21
1.	<i>Review of the calculation of probabilities and the theory of stochastic processes</i>	23
1.1	Probability space. Random variables	23
1.2	Expectation; conditional expectation	24
1.3	Distribution function; characteristic function	27
1.4	General discussion on stochastic processes	28
1.5	Concepts relating to martingales	30
2.	<i>Stochastic integrals</i>	32
2.1	The Wiener process	32
2.2	Introduction of stochastic integrals	33
2.3	Properties of the stochastic integrals as a function of the upper bound	37
2.4	Ito's formula	38
2.5	Applications of Ito's formula	44
3.	<i>Stochastic differential equations : strong formulation</i>	49
3.1	Definition of the problem	49
3.2	Investigation of the Lipschitz-continuous case	50
3.3	Investigation of the locally Lipschitz-continuous case	52

3.4	Use of monotonicity methods	59
3.5	Stochastic monotone multivalued equations	70
4.	<i>Stochastic differential equations : weak formulation</i>	78
	Synopsis	78
4.1	Fundamental lemma	79
4.2	Girsanov's Theorem	82
5.	<i>Linear elliptic partial differential equations of second order</i>	86
	Synopsis	86
5.1	Preliminary results	86
5.1.1	Sobolev spaces	86
5.1.2	Trace theorems	89
5.1.3	Green's formula	91
5.2	Variational formulation	93
5.3	H^2 regularity and interpretation of the problem to be solved	98
5.4	$W^{2,p}$ regularity	104
5.5	Elliptic P.D.E.'s of second order in \mathbb{R}^n	108
5.5.1	Unbounded coefficients of first order	108
5.5.2	Bounded coefficients	117
6.	<i>Linear partial differential equations of second order, of parabolic type.</i> ..123	
	Synopsis	123
6.1	Variational formulation	123
6.2	Regularity	126
6.2.1	Regularity with respect to time	126
6.2.2	Regularity with respect to the space variables	128
6.3	Parabolic P.D.E.'s of second order in $\mathbb{R}^n \times]0, T[$	133
6.3.1	Unbounded coefficients	133
6.3.2	Bounded coefficients	144
6.4	Positivity properties of the solution	147
6.5	Green's operator	148
7.	<i>Probabilistic interpretation of the solution of boundary value problems of second order</i>	157
7.1	Dirichlet problem	157
7.2	Elliptic problems in \mathbb{R}^n	160
7.3	Interpretation of parabolic problems in $Q = \mathcal{O} \times]0, T[$	167
7.4	Parabolic problems in $\mathbb{R}^n \times]0, T[$	169
8.	<i>Markov process associated with the solution of a stochastic differential equation</i>	172
8.1	Interpretation of the function $p(x, t_1, t, t_2)$	172
8.2	Some concepts relating to general Markov processes	176
8.3	A generalisation of Ito's formula	183
<i>Chapter 3 : Optimal stopping-time problems and variational inequalities</i>		187
<i>Introduction</i>		187
1.	<i>Stationary variational inequalities</i>	189
1.1	Various formulations of the problem	189
1.2	Existence and uniqueness theorem. Coercive case	192

1.3	Penalisation	193
1.4	Proof of existence in Theorem 1.1	196
1.5	Estimation of the 'penalisation error'	197
1.6	Monotonicity properties of the solution	198
1.7	'Non-coercive' case	199
1.8	Properties of the solution with respect to the domain \mathcal{O}	203
1.9	Regularity of the solution	205
1.10	The free surface	213
1.11	Unbounded open domain, bounded coefficients	216
1.12	Properties of the support of the solution	222
1.13	Unbounded open domain, unbounded coefficients	224
1.14	Other inequalities	229
1.15	Estimates for Au	232
2.	<i>Evolutionary variational inequalities</i>	235
2.1	The various formulations of the problems	235
2.2	Existence and uniqueness results for the strong solutions	237
2.3	Penalisation	239
2.4	Proofs of existence in Theorems 2.1 and 2.2	243
2.5	Estimation of the "penalisation error"	247
2.6	Maximum weak solution	250
2.7	Some properties of the maximum solution	255
2.8	Elliptic regularisation	257
2.9	Semi-discretisation	258
2.10	Regularity of the solution	261
2.11	A free-boundary problem and a one-phase Stefan problem	265
2.12	Further discussion on regularity	270
2.13	Properties of the solution relative to the domain \mathcal{O}	273
2.14	Infinite horizon	274
2.15	Unbounded open domain, bounded coefficients	278
2.16	Supports	278
2.17	Unbounded open domain, unbounded coefficients	280
2.18	Other inequalities	287
2.19	Problems periodic with respect to t	290
2.20	Estimate for $-\frac{\partial u}{\partial t} + Au$	295
2.21	Maximum weak solution as an upper envelope of sub-solutions	298
2.22	Stability of the maximum weak solution	299
3.	<i>Optimal stopping-time problems. Stationary case</i>	303
3.1	Synopsis	303
3.2	Regular case - bounded open domain	304
3.3	Non-homogeneous problems	308
3.4	Extension I. Weakening of assumptions concerning the coefficients	309
3.5	Extension II. Weakening of the assumptions concerning ψ and ϕ and interpretation of the 'penalised' problem	315
3.6	Extension III. Additional weakening of the regularity assumptions on ψ and ϕ	336
3.7	Extension IV. Operators which are not in divergence form	338
	Synopsis	338
	3.7.1 Assumptions - Notation	340
	3.7.2 The penalised problem	348
	3.7.3 Investigation of the inequality and solution of the optimal stopping-time problem	364
	3.7.4 Application to diffusions. Additional results	368
3.8	Probabilistic proof of certain properties of variational inequalities	378
3.9	Unbounded open domain	383

Synopsis	383
3.9.1 Bounded coefficients	383
3.9.2 Unbounded coefficients	398
3.10 Investigation of a particular inequality	402
3.11 An extension of regularity	408
4. <i>Optimal stopping-time problems - evolutionary case</i>	411
4.1 Synopsis	411
4.2 Regular case - bounded open domain	412
4.3 Extension I. Weakening of the assumptions concerning the coefficients	415
4.4 Extension II. Weakening of the assumptions concerning ψ and ϕ and interpretation of the penalised problem	416
4.5 Extension III. Weakening of the assumptions concerning u	418
4.6 Extension IV. Further weakening of the assumptions concerning ψ , ϕ and u	426
4.7 Extension V. Operators which are not in divergence form	428
4.8 Infinite horizon	435
4.9 Stopping-time problems in R^n - bounded coefficients	442
4.10 Unbounded coefficients	450
4.11 Problems which are periodic in t	452
4.12 The principle of separation for stopping-time problems	453
4.12.1 Introduction	453
4.12.2 Optimal stopping-time problem	456
5. <i>Stochastic differential games with stopping times</i>	462
Synopsis	462
5.1 The stationary case	462
5.1.1 Assumptions - notation - statement of the problem	462
5.1.2 Penalised problem	463
5.1.3 Solution of the inequality	467
5.1.4 Estimation of the penalisation error	474
5.1.5 Weakening of the assumptions on ψ_1, ψ_2	484
5.2 The nonstationary case	488
5.2.1 Operators which are not in divergence form	488
5.2.2 Operators in divergence form	490
5.2.3 Principle of separation	493
<i>Chapter 4 :</i> Stopping-time and stochastic optimal- control problems	495
<i>Introduction</i>	495
1. <i>Control by "continuous variable" and by stopping time</i>	495
1.1 Synopsis	495
1.2 The case " ϕ bounded" with bounded coefficients	495
1.3 Proof of uniqueness	498
1.4 Penalisation	498
1.5 Proof of existence in Theorem 1.1	501
1.6 Regularity of the solution	502
1.7 Monotonicity properties of the solution	506
1.8 The case " ϕ unbounded" with bounded coefficients	508
1.9 Infinite horizon	508
1.10 The case " ϕ unbounded" with unbounded coefficients	509
1.11 Maximum weak solution	509
1.12 Stationary problems	511

2.	<i>Review material on the Hamilton-Jacobi equation</i>	512
	Synopsis	512
2.1	Notation and assumptions	512
2.2	Interpretation of the solution of the Hamilton-Jacobi equation	516
2.3	Solution of the Hamilton-Jacobi equation	520
3.	<i>The Hamilton-Jacobi inequality. Operator not in divergence form</i>	524
3.1	Penalised scheme. Interpretation	524
3.2	The Hamilton-Jacobi inequality and the optimal stopping-time problem	526
4.	<i>Hamilton-Jacobi variational inequalities</i>	531
4.1	The games case	531
4.2	The control case	537
5.	<i>Optimal control and stopping times with polynomial growth</i>	539
5.1	Assumptions - notation - the problem	540
5.2	Proof of Theorem 5.1	542
6.	<i>The principle of separation</i>	547
6.1	Assumptions - notation - the problem	547
6.2	Preliminary results	551
6.3	Variational inequality	555
	BIBLIOGRAPHY	559
