| INTRODUCTION TO THE SERIES . . . . .                                      | v   |
| PREFACE . . . . .   | vii |
| CONTENTS . . . . .  | xi  |
| <br>  |     |
| CHAPTER 1. <i>The need for dynamic management decisions</i> . . . . .     | 1   |
| 1. Introduction . . . . .   | 1   |
| 2. Forces for enhanced planning and control . . . . .                     | 2   |
| 2.1. Large enterprises . . . . .  | 2   |
| 2.2. Technical complexity . . . . .                                       | 2   |
| 2.3. Rapid rate of change . . . . .                                       | 3   |
| 2.4. Longer consequences and broader scope of decisions . . . . .         | 3   |
| 3. Characteristics of enhanced planning and control . . . . .             | 4   |
| 4. Management control and optimal control . . . . .                       | 4   |
| 5. Features of dynamic management decisions . . . . .                     | 5   |
| 5.1. State description . . . . .  | 6   |
| 5.2. Controllable variables or functions . . . . .                        | 6   |
| 5.3. Objective function . . . . .   | 7   |
| 6. Complicating factors in dynamic management decision problems . . . . . | 8   |
| 6.1. Dynamics . . . . .   | 8   |
| 6.2. Multiple variables . . . . .   | 9   |
| 6.3. Interrelationships . . . . .   | 9   |
| 6.4. Uncertainty . . . . .  | 10  |
| 6.5. Partial observability . . . . .                                      | 10  |
| 7. The scope of the presentation . . . . .                                | 11  |
| 8. Some history . . . . .   | 13  |
| 9. Previous applications of control theory . . . . .                      | 13  |
| 9.1. Aerospace . . . . .  | 13  |
| 9.2. Processing . . . . .   | 14  |
| 9.3. Economics . . . . .  | 14  |
| <br>  |     |
| CHAPTER 2. <i>Introduction to modern control theory</i> . . . . .         | 15  |
| 1. Introduction . . . . .   | 15  |
| 2. Elements of control models . . . . .                                   | 15  |
| 2.1. State variables and evolutionary models . . . . .                    | 15  |
| 2.2. Admissible controls—admissible states . . . . .                      | 16  |
| 2.3. Optimal control laws . . . . .                                       | 16  |

|      |  |    |
|------|--|----|
| 3.   | Pontryagin's maximum principle . . . . .                           | 17 |
| 3.1. | Reformulation of the problem . . . . .                             | 17 |
| 3.2. | Obtaining the maximum principle . . . . .                          | 18 |
| 4.   | Economic interpretation of the adjoint variables . . . . .         | 20 |
| 5.   | The maximum principle with control and state constraints . . . . . | 24 |
| 5.1. | The necessary conditions with control constraints . . . . .        | 24 |
| 5.2. | The necessary conditions with state constraints . . . . .          | 25 |
| 6.   | The discrete maximum principle . . . . .                           | 27 |
| 6.1. | Notation for the discrete case . . . . .                           | 28 |
| 6.2. | Statement of the discrete maximum principle . . . . .              | 28 |
| 7.   | Stochastic control theory . . . . .                                | 30 |
| 7.1. | Introduction of uncertainties . . . . .                            | 30 |
| 7.2. | Admissible controls . . . . .                                      | 31 |
| 7.3. | Stochastic maximum principle . . . . .                             | 31 |
| 8.   | Analysis, solution and computation . . . . .                       | 32 |

### CHAPTER 3. *Inventory and production control* . . . . . 35

|      |  |    |
|------|--|----|
| 1.   | Introduction . . . . .   | 35 |
| 2.   | Deterministic demand and continuous production with no constraints . . . . .         | 36 |
| 2.1. | Quadratic costs, no constraints . . . . .  | 37 |
| 2.2. | Formulation of the necessary conditions . . . . .                                    | 37 |
| 2.3. | Solution of the necessary conditions . . . . .                                       | 38 |
| 2.4. | Linear decision rules . . . . .  | 39 |
| 2.5. | Example . . . . .  | 41 |
| 3.   | Deterministic demand with non-negative production rate and inventory level . . . . . | 42 |
| 3.1. | Formulation of the necessary conditions . . . . .                                    | 43 |
| 3.2. | Regional specialization of the necessary conditions . . . . .                        | 44 |
| 3.3. | Constant ordering and holding cost . . . . .   | 45 |
| 3.4. | Constant holding cost, convex ordering cost . . . . .                                | 47 |
| 3.5. | Extensions, extrapolations and planning horizons . . . . .                           | 49 |
| 4.   | Deterministic demand with instantaneous ordering . . . . .                           | 50 |
| 4.1. | Formulation of the problem . . . . .   | 50 |
| 4.2. | Derivation of the necessary conditions . . . . .                                     | 51 |
| 4.3. | Numerical solution of the optimal parameters . . . . .                               | 55 |
| 4.4. | Example with sinusoidal demand rate . . . . .  | 56 |
| 5.   | Production, inventories and work force . . . . .                                     | 58 |
| 5.1. | Setting-up of the model . . . . .  | 60 |
| 5.2. | The state-variable formulation . . . . .   | 61 |
| 5.3. | Open-loop solution . . . . .   | 65 |
| 5.4. | Closed-loop solution . . . . .   | 66 |
| 5.5. | Stochastic model . . . . .   | 68 |
| 5.6. | The stochastic control problem . . . . .   | 70 |
| 6.   | Conclusions . . . . .  | 72 |

|  |     |
|--|-----|
| <b>CHAPTER 4.      <i>Theory of the firm</i></b>                                 | 73  |
| 1. Introduction . . . . .  | 73  |
| 1.1. Objectives in dynamic theories . . . . .                                    | 74  |
| 1.2. Constraints . . . . .   | 74  |
| 1.3. Initial size . . . . .  | 75  |
| 2. A model of growth emphasizing financial aspects . . . . .                     | 76  |
| 3. The model . . . . .   | 77  |
| 4. Derivation of necessary conditions . . . . .                                  | 78  |
| 4.1. Transformation of the conditions . . . . .                                  | 79  |
| 4.2. Summary of the sufficient conditions . . . . .                              | 80  |
| 5. Analysis of possible time paths . . . . .                                     | 81  |
| 5.1. List of possible solutions . . . . .  | 81  |
| 5.2. Analysis of possible time paths . . . . .                                   | 81  |
| 6. Connecting the paths . . . . .  | 83  |
| 7. Utilizing labour and capital . . . . .  | 87  |
| 7.1. The introduction of the work force . . . . .                                | 87  |
| 7.2. Mathematical model involving capital and work force . . . . .               | 89  |
| 8. Conclusions . . . . .   | 95  |
| <b>CHAPTER 5.      <i>Optimal maintenance and life of machines</i></b>           | 97  |
| 1. Introduction . . . . .  | 97  |
| 2. Previous work on the replacement decision . . . . .                           | 97  |
| 2.1. Optimal replacement . . . . .   | 98  |
| 2.2. Introducing repair policy . . . . .   | 99  |
| 3. Mathematical model for optimal maintenance and the life of machines . . . . . | 100 |
| 3.1. Description of the model . . . . .  | 100 |
| 3.2. Optimization for a fixed time $T$ . . . . .                                 | 101 |
| 3.3. Solution in a particular case . . . . .                                     | 102 |
| 3.4. Optimal lifetime in the particular case . . . . .                           | 104 |
| 4. Some other formulations . . . . .   | 106 |
| 5. Technological change . . . . .  | 107 |
| 6. Conclusions . . . . .   | 108 |
| <b>CHAPTER 6.      <i>Finance</i></b>  | 111 |
| 1. Introduction . . . . .  | 111 |
| 2. Deterministic models in finance based upon control theory . . . . .           | 113 |
| 2.1. Discrete-time model . . . . .   | 113 |
| 2.2. An extended continuous formulation . . . . .                                | 117 |
| 3. Stochastic control model for portfolio analysis . . . . .                     | 119 |

|      |  |     |
|------|--|-----|
| 4.   | Applications of the stochastic maximum principle . . . . .                   | 121 |
| 4.1. | Stochastic maximum principle . . . . .                                       | 121 |
| 4.2. | Calculation of $E^{z(t)} p_s(t)$ . . . . .                                   | 122 |
| 4.3. | Comparison of decision rules . . . . .                                       | 125 |
| 4.4. | Some concluding remarks . . . . .  | 128 |
| 5.   | Simultaneous determination of an optimal portfolio and consumption . . . . . | 129 |
| 5.1. | General description of the problem . . . . .                                 | 129 |
| 5.2. | Setting of the model . . . . .   | 130 |
| 5.3. | Some remarks on the transaction costs . . . . .                              | 132 |
| 5.4. | Solution of the optimal control problem (5.10), (5.11) . . . . .             | 132 |
| 5.5. | The mutual-fund theorem . . . . .  | 134 |
| 5.6. | Solution in a particular case . . . . .                                      | 136 |
| 6.   | Conclusions . . . . .  | 138 |

## CHAPTER 7. *Marketing* . . . . . 141

|      |  |     |
|------|--|-----|
| 1.   | Introduction . . . . .   | 141 |
| 2.   | Optimization of price and advertising expenses in a firm . . . . . | 142 |
| 2.1. | Setting-up of the model . . . . .                                  | 142 |
| 2.2. | Necessary and sufficient conditions of optimality . . . . .        | 143 |
| 2.3. | Interpretation of the results . . . . .                            | 145 |
| 2.4. | Infinite horizon problem, constant price . . . . .                 | 146 |
| 3.   | Optimal marketing policy and the life of products . . . . .        | 149 |
| 3.1. | Introduction . . . . .   | 149 |
| 3.2. | The product life-cycle . . . . .                                   | 150 |
| 3.3. | The life-cycle model . . . . .                                     | 152 |
| 3.4. | Setting-up of the model . . . . .                                  | 153 |
| 3.5. | Goodwill is associated with the product . . . . .                  | 154 |
| 3.6. | Goodwill is transferred to new products . . . . .                  | 160 |
| 4.   | An illustration using empirical data . . . . .                     | 163 |
| 5.   | Conclusions . . . . .  | 164 |

## CHAPTER 8. *Control of natural resources* . . . . . 165

|    |  |     |
|----|--|-----|
| 1. | Introduction . . . . .   | 165 |
| 2. | A general model of pollution . . . . .                               | 167 |
| 3. | When pollution enters as a stock in the objective function . . . . . | 168 |
| 4. | Growth or pollution . . . . .  | 172 |
| 5. | Pollution as a flow in the utility function . . . . .                | 175 |
| 6. | Forest management . . . . .  | 177 |
| 7. | Conclusions . . . . .  | 180 |

|                            |  |           |     |
|----------------------------|--|-----------|-----|
| <b>CHAPTER 9.</b>          | <i>Numerical solutions of optimal control problems</i>           | . . . . . | 181 |
| 1.                         | Introduction   | . . . . . | 181 |
| 2.                         | Implicit optimal control   | . . . . . | 183 |
| 2.1.                       | Numerical methods based on dynamic programming                   | . . . . . | 184 |
| 3.                         | Indirect methods   | . . . . . | 185 |
| 3.1.                       | Methods for solving two-point boundary-value problems            | . . . . . | 186 |
| 3.2.                       | The shooting or neighbouring-optimum method                      | . . . . . | 187 |
| 3.3.                       | Quasilinearization or Newton-Raphson technique                   | . . . . . | 188 |
| 3.4.                       | Duality methods  | . . . . . | 189 |
| 4.                         | Direct methods   | . . . . . | 192 |
| 4.1.                       | The gradient method  | . . . . . | 192 |
| 4.2.                       | Second-order methods   | . . . . . | 194 |
| 5.                         | Simulation   | . . . . . | 195 |
| 5.1.                       | Simulation method in stochastic dynamic programming              | . . . . . | 196 |
| 6.                         | Dealing with constraints   | . . . . . | 197 |
| 6.1.                       | Projection on constraints  | . . . . . | 198 |
| 6.2.                       | Other feasible methods   | . . . . . | 198 |
| 6.3.                       | Penalty or barrier techniques                                    | . . . . . | 198 |
| 7.                         | Comparison of methods  | . . . . . | 199 |
| <b>CHAPTER 10.</b>         | <i>Some limitations and further research</i>                     | . . . . . | 201 |
| 1.                         | Introduction   | . . . . . | 201 |
| 2.                         | Application-area extensions                                      | . . . . . | 202 |
| 2.1.                       | Other areas of application                                       | . . . . . | 202 |
| 2.2.                       | A unifying structure   | . . . . . | 202 |
| 3.                         | Theoretical extensions   | . . . . . | 204 |
| 3.1.                       | Impulse controls   | . . . . . | 204 |
| 3.2.                       | Differential games   | . . . . . | 204 |
| 3.3.                       | Decentralization and large dynamic systems                       | . . . . . | 204 |
| 3.4.                       | Delays   | . . . . . | 204 |
| 4.                         | Implementation of control theory in firms                        | . . . . . | 205 |
| 4.1.                       | The management control system                                    | . . . . . | 206 |
| 4.2.                       | The place of modern control theory in management control systems | . . . . . | 208 |
| 4.3.                       | Research on implementation                                       | . . . . . | 209 |
| 5.                         | Conclusions  | . . . . . | 209 |
| <b>MATHEMATICAL REVIEW</b> | . . . . .  | . . . . . | 211 |
| 1.                         | Introduction   | . . . . . | 211 |
| 2.                         | Review of notation and concepts of set theory                    | . . . . . | 211 |

|                   |  |            |
|-------------------|--|------------|
| 3.                | Measure theory and integration . . . . .                                       | 212        |
| 3.1.              | Concept of $\sigma$ -algebra-measurable mapping . . . . .                      | 212        |
