Preface	<i>page vii</i>
Abbreviations and Notation	xi
1 Finite-dimensional linear estimation	1
1.1 The geometrical structure of linear estimation	1
1.2 Problems and complements	11
2 Stochastic processes and linear estimation	13
2.1 Stochastic processes	14
2.2 Hilbert space	30
2.3 Spaces of square-integrable random variables	42
2.4 Problems and complements	54
3 Orthogonal increments processes	56
3.1 General properties	56
3.2 Counting processes	59
3.3 Brownian motion and white noise	71
3.4 Wiener integrals	84
3.5 Problems and complements	96
4 Estimation in dynamical systems	100
4.1 Multidimensional processes	102
4.2 Linear stochastic equations	104

4.3	The Innovations Process	117
4.4	The Kalman Filter	134
4.5	Problems and complements	148
5	Linear stochastic control	151
5.1	Dynamic programming and the deterministic linear regulator	157
5.2	The stochastic linear regulator	163
5.3	Partial observations and the Separation Principle	173
5.4	Infinite-time problems	182
5.5	Problems and complements	190
6	An outline of further developments	193
6.1	Non-linear filtering and control	194
6.2	Distributed-parameter systems	201
	Appendix: Independence and Conditional Expectation	209
	References	216
	Index	219
