Contents

1. PRELIMINARIES 1

1. Set Theory 1
2. Topological Vector Spaces 2
3. Measures 10
4. Differentiable Functions 18

2. THE THEORY OF DISTRIBUTIONS 20

1. Introduction to the Concept of a Distribution 20
2. Study of Certain Function Spaces 22
3. Differentiation of Distributions 33
4. The Direct Product. The Multiplicative Product 38
5. Involution and Convolution 41
6. Further Remarks 50

3. THE FOURIER TRANSFORM 52

1. Further Remarks Regarding Measures 52
2. The Fourier Transform of Bounded Measures 57
3. Differentiability of the Fourier Transform 58
4. The Fourier Transform of the Derivative of a Function 58
5. Plancherel's Theorem 59
6. Extension of the Fourier Transform to L^2 62
7. The Fourier Transform of Infinitely Differentiable Functions of Rapid Decrease 64
8. Tempered Distributions 65
9. Differentiation of Tempered Distributions 66
10. The Fourier Transform of Tempered Distributions 67
11. Multipliers in $\mathcal{S}$ and $\mathcal{S}'$ 69
12. Involutions. The Convolution Product 70
13. Applications to the Fourier Transform of a Bounded Measure 75
14. The Fourier Transform in Several Variables 76

Formulas 77

4. THE LAPLACE TRANSFORM 79

1. The Laplace Transform of Measures with Positive Support 79
2. The Laplace Transform of a Distribution 86
3. Inverse-Transform Formulas 89
4. Initial-Value and Final-Value Theorems 93
5. Applications of the Laplace Transform 98
6. The Laplace Transform of Vector-Valued Functions 102

Table of Laplace Transforms 103

5. ELEMENTS OF PROBABILITY THEORY 105

1. Measures in a Vector Space 105
2. Probability Distributions 106
3. Random Variables 110
4. Descriptive Elements of a Probability Distribution 113
5. Geometric Study of Scalar Random Variables 120
6. Stochastic Independence of Random Variables 126
7. Convergence of Probability Distributions and Random Variables 133

Table of the Normalized Gaussian Distribution 135

6. MARKOV CHAINS 136

1. Definition of Markov Chains. Graph-Theory Concepts 136
2. Spectral Analysis of Stochastic Matrices 140
3. Asymptotic Behavior 151

7. SECOND-ORDER STATIONARY RANDOM PROCESSES 155

1. Functions of Positive Type. Bochner's Theorem 155
2. Unitary Representations of R in a Hilbert Space 159
3. Second-Order Stationary Random Processes 166
4. Convolutions on a Stationary Process of the Second Order 172
5. Extension of a Convolution 173
6. Generalizations. Poisson Processes 179

8. LINEAR SERVO SYSTEMS 189

1. Description of Stationary Linear Systems 189
2. Control Systems 198
3. Stability 201
4. Gain Control 208
5. Compensation and Anticipation 212

9. FILTERING, PREDICTION, ANTICIPATION 215

1. Systems with Random Inputs 215
2. Filtering and Prediction. The Wiener-Hopf Equation 218
3. Solution of the Wiener-Hopf Equation 220
4. Anticipation 227

10. DISCRETE SYSTEMS, PART I 228

1. Definitions and Notations 228
2. The Fourier Transformation 233

3. Differentiation. Convolutions. Involutions 238
4. Relationships Between Harmonic Analysis on R and Harmonic Analysis on T or Z 243

11. DISCRETE SYSTEMS, PART II 252

1. The Laplace Transform of a Unilateral Sequence 252
2. Sequences of Positive Type 258
3. Unitary Representations of Z in a Hilbert Space 259
4. Stationary Random Processes of the Second Order 262
5. Discrete Servo Systems 266
6. Sampling. Blocking 268

12. CONVEX SETS 273

1. Definitions and Elementary Properties 273
2. Convex Sets in Topological Vector Spaces 276
3. Separation of Convex Sets 280
4. Support Hyperplanes and Extremal Points 283
5. Facets. Asymptotic Cones 285
6. Convex Functions 288

13. PROGRAMMING PROBLEMS 290

1. Statement of the Problem and General Notations 290
2. First-Order Conditions 291
Appendix 305

14. LINEAR PROGRAMMING 308

1. Preliminaries 308
2. The Simplex Method 310
3. Duality 320
4. Parametrization 323

15. DYNAMIC PROGRAMMING 327

1. Exposition of the Method 327
2. An Example 331

16. MARKOV CONTROL SYSTEMS 339

1. Markov Systems with Gain 339
2. Markov Systems with Control and Gain 343
3. Markov Systems with Targets and Transition Costs 349
4. Markov Systems with Controls, Targets, and Transition Costs 351

17. MINIMUM-TIME CONTROL OF LINEAR SYSTEMS 360

1. Discrete Systems 360
2. Continuous Systems 365

18. PONTRYAGIN'S PRINCIPLE 379

1. Review of Differential Equations 379
2. The Problems of Optimum Control 381

3. The Case of a Fixed Horizon and a Free Final State 382
4. The Case of a Fixed-Horizon Final Criterion with Relations on the Final State 387
5. The Parametric Method. The Case of an Undetermined Horizon 397
6. The Case of an Integral Criterion 401
Appendix 403
