

# CONTENTS

CHAPTER 1 :	PRELIMINARIES	
1.1	Introduction	1
1.2	A Short Review	8
CHAPTER 2 :	BANG-BANG PARTIALLY OBSERVABLE FEEDBACK STRATEGIES	15
2.1	Introduction	15
2.2	Necessary Conditions on Optimal Strategies: $u = \mathbb{R}^d$	16
2.3	Necessary Conditions on Optimal Strategies: $u$ is Bounded	22
2.4	Further Remarks on the Necessary Conditions	26
2.5	Weak Optimal Strategies	27
2.6	Sufficient Conditions on Weak Optimal Strategies	30
2.7	Computation of Weak Suboptimal Strategies	39
2.8	The Numerical Method	41
2.9	Example 1 : A Patrol Problem	44
2.10	Example 2 : A Rendezvous Problem	52
2.11	Example 3 : Control of an Oscillator	66
2.12	Probabilistic Interpretation of (2.124)-(2.125)	70
CHAPTER 3 :	STRATEGIES USING INTERRUPTED OR SAMPLED OBSERVATIONS	74
3.1	Introduction	74
3.2	Necessary Conditions on Optimal Strategies: $u = \mathbb{R}^d$	78
3.3	Necessary Conditions on Optimal Strategies: $u_i, i=0,1$ , are Bounded	85
3.4	Sufficient Conditions on Weak Optimal Strategies	91

3.5	Computation of Weak Suboptimal Strategies	99
3.6	The Numerical Method	101
3.7	Example 1 : Smooth Strategies for Steering a Random Motion of a Point Along a Line	104
3.8	Example 2 : Bang-Bang Strategies for Steering a Random Motion of a Point	112
3.9	Example 3 : Bang-Bang Strategies for Hitting a Moving Target	121
3.10	Example 4 : Strategies Using Random Sampling of the Observations	145
3.11	Probabilistic Interpretation of $(Q_0, Q_1)$	155
CHAPTER 4	ESTIMATION AND CONTROL FOR NONLINEAR STOCHASTIC SYSTEMS	158
4.1	Necessary Conditions on Optimal Estimation and Control	158
4.2	A Numerical Example	166
4.3	An Alternative Approach to Nonlinear Filtering: Time-Continuous Observations	172
4.4	Numerical Examples	180
4.5	An Alternative Approach to Nonlinear Filtering: Maximizing the Probability of Hitting a Target Set	188
4.6	Numerical Examples	192
4.7	An Alternative Approach to Nonlinear Filtering: Jump Process Observations	198
4.8	Numerical Examples	212
