

## CONTENTS

Anatole Beck: Continuous Flows in the Plane.....	1
A. Brunel: New Conditions for Existence of Invariant Measures in Ergodic Theory.....	7
R. V. Chacon: Approximation and Spectral Multiplicity.....	18
R. V. Chacon and T. Schwartzbauer: Approximation and Invariance.....	28
P. Erdős and A. Rényi: On Some Applications of Probability Methods to Additive Number Theoretic Problems.....	37
Arshag B. Hajian and Shizuo Kakutani: Example of an Ergodic Measure Preserving Transformation on an Infinite Measure Space.....	45
D. L. Hanson: Some Results on Convergence Rates for Weighted Averages.....	53
S. Horowitz: A Note on $\sigma$ -finite Invariant Measures.....	64
A. Ionescu Tulcea: Super-mean-valued Functions and Semipolar Sets.....	71
C. Ionescu Tulcea: Liftings and Derivation Bases.....	75
Konrad Jacobs: Lipschitz Functions and the Prevalence of Strict Ergodicity for Continuous-Time Flows.....	87
Eugene M. Klimko: Weak Ratio Convergence of Measures in Infinite Measure Spaces.....	125
Ulrich Krengel: Transformations without Finite Invariant Measure Have Strong Generators.....	133
Wolfgang Krieger: On the Araki-Woods Asymptotic Ratio Set and Non-Singular Trans- formations of a Measure Space.....	158
D.S. Ornstein: Imbedding Bernoulli Shifts in Flows.....	178

Donald S. Ornstein and Louis Sucheston: On the Existence of A $\sigma$ -finite Invariant Measure under a Generalized Harris Conditions.....	219
Fredos Papangelou: The Ambrose-Kakutani Theorem and the Poisson Process.....	234
M. M. Rao: Generalized Martingales.....	241
Thomas R. Terrell: Local Ergodic Theorems for N-Parameter Semigroups of Operators.....	262
