

Contents

I. Introduction	<i>page 1</i>
1. Some examples	1
2. The aims of an investigation of congestion	2
3. The arrival pattern	5
4. The service mechanism	18
5. The queue-discipline	24
6. The measurement of congestion	26
7. The investigation of queueing systems	27
8. The modification of queueing systems	30
II. Some simple queues with random arrivals	33
1. Introduction	33
2. Statistical equilibrium	33
3. Single-server queue with random arrivals and exponential service-times	39
4. Arrival rates and service-times dependent on queue size	43
5. Further remarks on equilibrium conditions	48
6. Single-server queue with random arrivals and general distribution of service-times	50
7. The busy-period distribution	58

III. More about simple queues	60
1. Non-equilibrium theory	60
2. Queues with many servers	68
3. Queues with priorities	76
IV. Machine Interference	91
1. Statement of problem	91
2. The simplest probability model	95
3. Some complications	101
V. More specialized topics	110
1. Introduction	110
2. The method of stages	110
3. The integral equation of a single-server queue	117
4. Simulation and Monte Carlo methods	127
5. Series of queues	136
6. The busy-period distribution	144
Appendixes	
I. Bibliographical notes	160
II. Exercises and further results	166
III. Notes on the theory of probability and Laplace-Stieltjes transforms	173
Author Index	176
Subject Index	177
