

CONTENTS

<i>Preface</i>	ix
<i>Acknowledgments</i>	xi
1. Introduction	1
2. Classical Methods of System Identification	
2.1. Introduction	5
2.2. Deconvolution Methods for Impulse Response Identification	6
2.3. System Identification Using Correlation Techniques	13
2.4. Identification of Time-Varying Linear Processes by Sinusoidal Response Measurement	18
2.5. Learning Models	32
2.6. Wiener Theory of Nonlinear Systems	34
2.7. Conclusions	37
3. Cost Functions for System Identification	
3.1. Introduction	38
3.2. Maximum a Posteriori Identification	45
3.3. Maximum a Posteriori Identification with Unknown Prior Statistics	57
3.4. Maximum Likelihood Identification	66
3.5. Summary	81

4. Gradient Techniques for System Identification	
4.1. Introduction	82
4.2. The Gradient Technique for Single-Stage Identification Problems	83
4.3. Gradient Methods for Multiple Stage and Continuous System Identification	92
4.4. Summary	110
5. System Identification Using Stochastic Approximation	
5.1. Introduction	111
5.2. Stochastic Approximation for Stochastic Dynamic Systems	116
5.3. Sequential Estimation of Linear System Dynamics Using Stochastic Approximation	137
5.4. Summary	150
6. Quasilinearization	
6.1. Introduction	152
6.2. Continuous Systems	153
6.3. Discrete Systems	167
6.4. Difference and Differential Approximation	176
6.5. Summary	180
7. Invariant Imbedding and Sequential Identification	
7.1. Introduction	181
7.2. Continuous Systems	182
7.3. Discrete Systems	193
7.4. Summary	209
Bibliography	210
<i>Index</i>	218
