

CONTENTS

FOREWORD	ix
PREFACE	xi
CONTENTS OF VOLUME B	xvii
INTRODUCTION	xix

PART I The Dynamics of Digital Automation

<i>Chapter I.</i>	Evaluating Data Control Opportunities	3
	Basic Needs in Information Technology	5
	Dichotomies in Computer Usage	10
	Functional Aspects of Data Control	14
	Utilizing Past Experience	18
<i>Chapter II.</i>	The Functions of a Data System	22
	Defining Operating Conditions	23
	Outlining Control System Functions	26
	Factors in Systems Development	30
	Systems Mechanics and Memory Specifications	37
<i>Chapter III.</i>	Studying the General Structure	41
	Examining the Processing of Information	42
	Multicomputer Systems	46
	Channels and Multiplexing Requirements	51
<i>Chapter IV.</i>	Principles of Systems Analysis	57
	Critical Questions and the Systems Function	58
	Establishing the Systems Profession	63
	Systems Work and Mathematical Analysis	70

PART II

Data Collection and Teletransmission

<i>Chapter V.</i>	Data Collection Problems	77
	Developing Acceptable Sensory Techniques	77
	Classifications in Data Collection	83
	Some Data Collection Activities	88
	Examining an Interface Unit	91
<i>Chapter VI.</i>	Conversion Methods	96
	Dynamics of Signal Processing	99
	Mechanics of Analog-to-Digital Conversion	107
<i>Chapter VII.</i>	Data Carriers	115
	Data Transcription for Transmission Purposes	116
	Data Transmission through Various Media	121
	Automatic System of Telephone Exchange	130
<i>Chapter VIII.</i>	Structural Aspects of Teletransmission	135
	Operational Features of the "Telesystem"	136
	Example of a Teletransmission Network	142
	Design Approaches to Telecommunication Problems	147

PART III

Numerical, Logical, and Stochastic Processes

<i>Chapter IX.</i>	The Use of Numerical Systems	157
	Developments in the Art of Calculation	158
	The Evolution of Numerical Systems	159
	Numerical Systems for Use with Electronic Machines	162
	Arithmetic Operations	165
	The Process of Complementing	169
<i>Chapter X.</i>	Fundamentals of Boolean Algebra	173
	Examining the Boolean Logic	174
	The Functions of Logical Sets	176
	Minimal Forms of Boolean Functions	180
	Boolean Matrices	185
	Black Box Analysis through Boolean Tools	186
<i>Chapter XI.</i>	Classifications in Information Retrieval	190
	Automatic Information Retrieval Techniques	191
	Indexing for Retrieval Purposes	194
	Literary Sets and Subsets	197
	Information Regeneration and Guidance Profiles	201

<i>Chapter XII.</i>	Stochastic Searching	206
	Dynamics of the Communications Problem	207
	Evaluating Stochastic Searching	211
	Machine Records and the Upkeep of a Dictionary	214
	The Sophistication of the Document and the Over-All Effort	217

PART IV

Mathematics for Systems Control

<i>Chapter XIII.</i>	Analysis, Speculation, and Evolution	223
	An Analytical View of Data and Models	224
	Technological versus Natural Systems	228
	Reflections on the Process of Evolution	234
	The Means and the End	237
<i>Chapter XIV.</i>	The Mathematical Simulator	241
	Black Boxes for Process Control Applications	242
	Formulating Adequate Mathematical Models	245
	Dynamics of Mathematical Experimentation	252
<i>Chapter XV.</i>	Evaluating Mathematical Programming	257
	Linear Approaches to Scheduling and Control	259
	Scheduling Programs through Electronic Media	263
	Establishing Validity before Usage	266
	Integrating the Model, the Computer, and the Field Requirements	269
	Mathematics for Design Automation	273
<i>Chapter XVI.</i>	Establishing Systems Reliability	278
	Systems Reliability Fundamentals	279
	Convalescence and Its Computation	289
	Defining Utility Functions	296
	Matters Concerning Systems Value	298

PART V

Programming for Real-Time Duty

<i>Chapter XVII.</i>	Considering Programming Approaches	307
	Programming Skill for Process Control	308
	Constructing a Process-Control Program	310
	Examining Special Programming Features	315
	Generalizing Program Characteristics	320

<i>Chapter XVIII.</i>	In-Memory Operations	325
	Selection in Memory	326
	The Deadlock Problem	328
	Access to Memory	331
	Memory Dumps and Semiprograms	332
	Date Retrieval and Priorities	337
<i>Chapter XIX.</i>	Real-Time Executive Routines	342
	Developing an Executive Program	343
	Establishing Fundamental Characteristics	348
	Mechanics of the Supervisory Control	352
	Summarizing the Executive Action	355
<i>Chapter XX.</i>	Programming Aids for Process Control	362
	Designing an Assembler-Generator	363
	Critical Subroutines and Function Programs	366
	Assembler Commands and Macro-Operations	370
	Some Reliability Considerations	374
INDEX		379
