Preface	v
List of Tables	xv
List of Charts	xix
1. <i>Introduction</i>	
1.1. Focus and Emphasis of Monograph	1
1.2. Special Features Reconsidered	2
1.3. Apparent vs Genuine Scatter – A Fundamental Feature in Model Building	23
1.4. General Features of Multirelational Model Building	35
2. <i>Framework for Analysis of Monte Carlo Results</i>	92
2.1. Monte Carlo Investigations as a Research Tool	93
2.2. Generating Monte Carlo Data	95
2.3. Six Series of Models	98
2.4. Four Methods of Estimation in Focus	103
2.5. Criterion in Judging Alternative Methods of Estimation	106
2.6. Time-Series vs Cross-Section Data	108

3. <i>Methods of Estimation</i>	109
3.1. Scope and Evaluation of the Present Study	109
3.2. Reference to More General ID systems (by E.Lyttkens and H.Wold)	112
3.3. Ordinary Least Squares (OLS) Estimation (by E.Lyttkens and H.Wold)	120
3.4. Two-Stage Least Squares (TSLS) Estimation (by E.Lyttkens and H.Wold)	124
3.5. Fix-Point (FP) Estimation	127
3.6. Fractional Fix-Point (FFP) Estimation (by A.Ågren)	129
3.7. Recursive Fix-Point (RFP) Estimation (by L.Bodin)	136
3.8. Algebraic FP (AFP) Estimation of Summers' Model (by E.Lyttkens)	143
3.9. Some Asymptotic Formulas for Standard Errors and Small-Sample Bias of FP Estimates (by E.Lyttkens)	152
3.10. Maximum Likelihood Aspects of the FP Estimates of GEID Models (by E.Lyttkens)	165
4. <i>Predictive Power – A Summary Statistic</i>	
4.1. Summary of Overall Set of Estimates for a Model	169
4.2. Predictions from Reduced Form Equations	174
4.3. R^2 Computed from Data Within the Sample Period	175
4.4. R^2 Computed from Data Outside the Sample Period	184
5. <i>Convergence</i>	
5.1. General Appraisal	209
5.2. Size of Beta Coefficients	217
5.3. Limiting the Number of Iterations	222
5.4. Number of Variables per Equation and Number of Equations	227
5.5. Size of Sample	230
5.6. Size of Residuals	233
5.7. GEID Models	236

6. <i>Consistency of Estimates</i>	239
6.1. Results with Increasing Sample Size	239
6.2. Results Using Population Data	246
6.3. Size of Beta Coefficients and Evidence on Consistency of FP	247
6.4. FP gives Plural Solutions for Some GEID Systems	250
7. <i>Small-Sample Bias in Specific Parameters</i>	
7.1. Introduction	251
7.2. Small Bias in both FP and TSLS if Betas or Residuals are Small	255
7.3. Sample Size	259
7.4. Size of Residuals	262
7.5. Number of Predetermined Variables	266
7.6. Specific Values of Beta Coefficients that Lead to Large Bias	269
7.7. Lagged Endogenous Variables and Inter-Correlations among Exogenous Variables	274
7.8. GEID Specifications	279
8. <i>Dispersion of Estimates</i>	288
8.1. In Models with Small Betas FP and TSLS are Approximately the Same	289
8.2. Sample Size	292
8.3. Size of Residuals	298
8.4. Number of Predetermined Variables	302
8.5. Specific Values of Beta Coefficients that Lead to Large Dispersion	305
8.6. Lagged Endogenous Variables and Inter-Correlations among Exogenous Variables	309
8.7. GEID Specifications	313
9. <i>Some General ID (GEID) Models</i>	
9.1. Rationale of GEID Models	316

9.2. Difference in Relative Performance of OLS, TSLS, and FP for Classic ID vs GEID Models	318
9.3. Algebraic FP (AFP) Estimation of Girshick-Haavelmo's Model (by E.Lyttkens)	330
10. <i>Monte Carlo Results for Each of Forty-Six Models</i>	
10.1. Overall Features of the Experimental Design	336
10.2. Tables of Monte Carlo Results	342
11. <i>Symmetric and Asymmetric Estimation Methods</i> (by E.Lyttkens)	
11.1. Asymmetry of the TSLS Method	434
11.2. Asymmetry of the 3SLS Method	440
11.3. Symmetry of the Classic Maximum Likelihood Method	441
11.4. Iterative Instrumental Variables (IIV) Estimation	444
11.5. Algebraic Instrumental Variables (AIV) Estimation of Summers' Model	448
11.6. An Iterative Method for Partly Respecified Systems	453
11.7. Algebraic Estimation of Girshick-Haavelmo's Model in a Partly Respecified Version	456
12. <i>Special Characteristics brought to Light</i>	460
12.1. Degree and Type of Interdependence is Important	461
12.2. Overidentification De-emphasized with Emergence of LIML and TSLS Estimation	463
12.3. Relationship between URF and Generated Reduced Form in FP Estimation	464
12.4. Predictive Power as a Test for Comparing Alternative Methods	466
12.5. Full Information Methods Questionable for Large Models	467
12.6. Accuracy in Computations	469
13. <i>Any Verdict yet?</i>	471
13.1. Sketches of Distributions for Parameter Estimates	473
13.2. Methods and Types of Models not Considered	485

13.3. Criteria for Judging Estimation Methods	491
13.4. Comments on Methods of Estimation and Model Specification	493
Appendix I. Symbols, Abbreviations, and Formats for References	497
Appendix II. Normalizing Variables	503
Notes	507
References	522
Subject Index	532
Author Index	541
