Table of Contents

PART I. Elements of the Theory of Hints 1

1. Introductory Examples 3
1.1 Pure Arguments, Unreliable Rules and Assumption-Based Reasoning 3
1.2 Causal and Evidential Modeling 7
1.3 Pooling of Evidence, Cascaded Inference and Multiple Causes . 13
1.4 Evidential Reasoning in Expert Systems 17
1.5 Measurement, Estimation and Diagnostics 20
1.6 Imprecise Measurements 27
1.7 Conclusion 31

2. The Mathematical Concept of a Hint 32
2.1 Questions and Answers 32
2.2 Describing Hints 33
2.3 Modeling with Hints 37

3. Support, Credibility, Plausibility and Possibility 40
3.1 Judging Hypotheses in the Light of Hints 40
3.2 Elementary Properties of Support and Plausibility Functions . 42
3.3 Equivalence of Hints 45
3.4 Commonality Functions 48
A3 Appendix: Proofs of Theorems in Chapter 3 50

4. Combining Hints 61
4.1 Dempster's Rule 61
4.2 Dempster's Rule and Commonality Functions 67
4.3 Conditioning of Hints 69
4.4 Combining with Precise Hints 69
4.5 Consonant Combination 73
A4 Appendix: Proofs of Theorems in Chapter 4 74

5. Probabilistic Assumption-Based Reasoning 82
5.1 Representing Uncertain Knowledge by Propositional Systems . 82
5.2 Propositional Logic and Boolean Algebra 85
5.3 Propositional Systems With Uncertain Assumptions and Hints 90
5.4 Support of Hypotheses: a Logical View 93
5.5 Computing Quasi-Supports and Contradictions by Resolution 97
5.6 Skipped Ordered Resolution 104

5.7 Computing Degrees of Support 110
A5 Appendix: Proofs of Theorems in Chapter 5 120

6. Rule-Based Systems With Unreliable Rules 136
6.1 Inference Networks and Monotone Systems 136
6.2 Computing Degrees of Support in Inference Trees and Networks 140
6.3 Computing Bounds For the Degree of Support 146
6.4 The Factorization Method For Unreliable Rule-Based Systems 148
A6 Appendix: Proofs of Theorems in Chapter 6 153

7. Compatible Frames of Discernment 156
7.1 Refinings and Coarsenings 156
7.2 Families of Compatible Frames 161
7.3 Independence of Frames 169
A7 Appendix: Proofs of Theorems in Chapter 7 175

8. Reasoning on Compatible Frames 188
8.1 Reasoning With Constraints 188
8.2 Combining Hints in a Family of Compatible Frames 196
8.3 Markov Trees and Hypertrees 199
8.4 Triangulated Graphs, Hypergraphs and Markov Trees . . . 210
8.5 Choosing an Elimination Sequence: Optimality Issues and Heuristics 220
A8 Appendix: Proofs of Theorems in Chapter 8 225

PART II: Applications 243

9. Statistical Inference 245
9.1 Introduction: The Basic Model 245
9.2 Statistical Inference in the Framework of Hints 248
9.3 Sampling Models 253
9.4 Measurement Models 261

10. Describing Uncertainty in Dynamical Systems 270
10.1 Describing Dynamical Systems by Hints 270
10.2 Special Case of Stochastic Systems 273
10.3 Special Case of Systems With Imprecisely Known Disturbances 275
A10 Appendix: Proofs of Theorems in Chapter 10 277

11. Diagnostics 281
11.1 Relational Models 281
11.2 Diagnostics in a Hierarchical Hypothesis Space 288
11.3 Model-Based Diagnostics 297

12. Temporal and Spatial Reasoning 305
12.1 Introductory Examples 305
12.2 A Class of Models Based on Groups 308
12.3 Model Reductions 312

12.4 Model Decompositions 316
12.5 Irreducible and Undecomposable Models 318
12.6 Planar Geometric Reasoning 322
12.7 Rectangular Geometric Models 326
12.8 Project Scheduling 336
A12 Appendix: Proofs of Theorems in Chapter 12 340

PART III: A General Theory of Hints 353

13. The General Model of a Hint 355
13.1 Families of Implied and Possible Hypotheses 355
13.2 Support and Plausibility Functions 358
13.3 Allocation and Allowment of Probability 361
13.4 Extensions of Support and Plausibility Functions 364
A13 Appendix: Proofs of Theorems in Chapter 13 365

14. Structure of Support and Plausibility 370
14.1 Refining Hints 370
14.2 The Structure of Support and Plausibility Functions . . . 373
A14 Appendix: Proofs of Theorems in Chapter 14 376

15. Dempster's Rule in the General Case 383
15.1 Combination of Hints 383
15.2 Hints on Product Spaces 386
A15 Appendix: Proofs of Theorems in Chapter 15 387

16. Closed Random Intervals 393
16.1 Simple Closed Random Intervals 393
16.2 Closed Random Intervals 395
16.3 Monotone Convergence of Cris and Dempster's Rule . . . 401
16.4 Random Variables 403
A16 Appendix: Proofs of Theorems in Chapter 16 406
