

# Contents

<b>Chapter 1</b>	<b>Normal and Non-normal Data</b>	
1-1	What are sturdy statistics? . . . . .	1
1-2	What does this book do? . . . . .	2
1-3	The shapes of normal distributions . . . . .	2
1-4	The family of normal distributions. . . . .	6
1-5	Permutation tests for differences in distributions. . . . .	12
1-6	Permutation test with large samples; simulation . . . . .	17
1-7	Normal approximation for permutation test for difference of means	19
<b>Chapter 2</b>	<b>Applications of the Binomial and Multinomial Distributions</b>	
2-1	The binomial distribution . . . . .	24
2-2	The normal approximation for the binomial . . . . .	25
2-3	The sign test: more work for the binomial . . . . .	29
2-4	Significance level and power . . . . .	32
2-5	Power functions for the sign test . . . . .	35
2-6	An informal and often used approach to testing . . . . .	38
2-7	The multinomial distribution . . . . .	41
2-8	Applications and tables of the multinomial distribution. . . . .	46
2-9	Unbiased and maximum likelihood estimation . . . . .	48
<b>Chapter 3</b>	<b>Ranking Methods for Two Independent Samples</b>	
3-1	A problem and a method . . . . .	54
3-2	The Mann-Whitney two-sample test . . . . .	56
3-3	Tables for the Mann-Whitney test . . . . .	60
3-4	Formulas for $n = 1, n = 2$ . . . . .	65
3-5	Power of the Mann-Whitney test . . . . .	68
3-6	Tables for computing power for normally distributed alternatives for Mann-Whitney test . . . . .	68
<b>Chapter 4</b>	<b>Normal Approximation for the Mann-Whitney Test</b>	
4-1	Mean and variance of $T$ , the rank sum of the $B$ -sample . . . . .	73
4-2	Normal approximation for the Mann-Whitney test . . . . .	76

4-3	A closer look at the Mann-Whitney statistic . . . . .	80
4-4	How to rank ties . . . . .	84

**Chapter 5 Wilcoxon's Signed Rank Test**

5-1	The Wilcoxon statistic, $W$ . . . . .	89
5-2	The distribution of $W$ under the null hypothesis . . . . .	92
5-3	Tables for the distribution of $W$ ; the normal approximation . . . . .	94
5-4	Power of the Wilcoxon signed rank test for shift alternative with normally distributed differences . . . . .	99

**Chapter 6 Rank Correlation**

6-1	Correlation coefficient; special case . . . . .	103
6-2	Rank correlation coefficient; the general case . . . . .	108
6-3	The null distribution of the rank correlation coefficient, $r_S$ . . . . .	112
6-4	Tables for the distribution of $r_S$ ; the normal approximation . . . . .	119
6-5	Power of the rank correlation coefficient; the bivariate normal distribution . . . . .	122

**Chapter 7 Rare Events: The Poisson Distribution**

7-1	What processes yield a Poisson distribution? . . . . .	125
7-2	The Poisson probability distribution: mean and variance . . . . .	127
7-3	The Poisson approximation for the binomial . . . . .	133
7-4	Distribution of the sum of two independent Poisson random variables . . . . .	135
7-6	Estimation . . . . .	139

**Chapter 8 The Exact Chi-Square Distribution**

8-1	Sums of squares of standard normal deviates . . . . .	141
8-2	Chi-square distribution with one degree of freedom . . . . .	144
8-3	Tables for $\chi^2$ -distributions . . . . .	148
8-4	Shapes of $\chi^2$ -distributions; the normal approximation . . . . .	149
8-5	Losing degrees of freedom . . . . .	154

**Chapter 9 Applying Chi-Square to Counted Data: Basic Ideas**

9-1	The idea of goodness-of-fit: particular case . . . . .	159
9-2	Approximation of the exact discrete distribution by the continuous chi-square . . . . .	164
9-3	Idea of goodness-of-fit: general discussion . . . . .	168
9-4	The $1 \times 2$ contingency table; general $p$ . . . . .	170
9-5	Continuity correction for one degree of freedom . . . . .	173

**Chapter 10 Applying Chi-Square:  $1 \times k$  Tables**

10-1	The $1 \times k$ contingency table; known $p$ 's . . . . .	175
10-2	The $1 \times k$ table; fitting a parameter . . . . .	177
10-3	Pooling cells . . . . .	182
10-4	Goodness-of-fit for continuous distributions . . . . .	185
10-5	Chi-square when the null hypothesis is false . . . . .	186

<b>Chapter 11</b>	<b>Applying Chi-Square: Two-Way Tables</b>	
11-1	$2 \times 2$ contingency tables; some origins . . . . .	192
11-2	$2 \times 2$ contingency tables; the chi-square test for independence . . . . .	194
11-3	Correction for continuity . . . . .	199
11-4	$r \times c$ contingency tables . . . . .	200
11-5	Alternative ways of examining assumptions for several binomial samples . . . . .	205
11-6	The estimated values. . . . .	207
 <b>Chapter 12</b>	 <b>The Kruskal-Wallis Statistic</b>	
12-1	Testing three independent samples . . . . .	210
12-2	The Kruskal-Wallis statistic for several independent samples . . . . .	212
12-3	Relation of $H$ to Mann-Whitney statistic $T$ ; distribution of $H$ . . . . .	216
12-4	Tables for the Kruskal-Wallis statistic. . . . .	219
 <b>Chapter 13</b>	 <b>The Problem of <math>m</math> Rankings: The Friedman Index</b>	
13-1	The problem of more than two rankings; a special case . . . . .	224
13-2	Average rank correlation coefficient for several pairs of judges . . . . .	226
13-3	Testing for randomness; the Friedman statistic . . . . .	229
 <b>Chapter 14</b>	 <b>Order Statistics: Distributions of Probabilities; Confidence Limits, Tolerance Limits</b>	
14-1	What are order statistics and why study them? . . . . .	234
14-2	Confidence limits for the median and other quantiles of the population . . . . .	236
14-3	Distribution of the probability to the left of the $i$ th order statistic; statistically equivalent blocks . . . . .	241
 <b>Chapter 15</b>	 <b>Order Statistics: Point Estimation</b>	
15-1	Ideas of point estimation for means and medians . . . . .	248
15-2	Distribution of $U_i$ . . . . .	251
15-3	Tables of expected values for the order statistics of the standard normal distribution . . . . .	256
15-4	Variances and covariances of the order statistics from a normal distribution . . . . .	260
15-5	Use of ranges to estimate $\sigma$ . . . . .	263
 <b>Chapter 16</b>	 <b>Designing Your Own Statistical Test or Measure</b>	
16-1	First steps: try to avoid invention . . . . .	266
16-2	Runs up and down; comparing tests for trend . . . . .	267
16-3	The comparative study of the power of several tests for slippage or shift in location . . . . .	269
 <b>Appendix I</b>	 <b>Discrete Distribution of a Random Variable</b>	
I-1	What is a random variable? . . . . .	273
I-2	Probability function of a discrete random variable . . . . .	274
I-3	The cumulative distribution. . . . .	275

I-4	The mean and the variance . . . . .	276
I-5	Some properties of means and variances . . . . .	278
<b>Appendix II Continuous Distribution of a Random Variable</b>		
II-1	Probabilities represented by areas . . . . .	279
II-2	The probability density function . . . . .	280
II-3	Mean and variance of a continuous distribution . . . . .	281
<b>Appendix III Normal Approximations: Central Limit Theorems</b>		
III-1	The value of approximations . . . . .	284
III-2	Standardized random variables . . . . .	284
III-3	The central limit theorem for the binomial . . . . .	285
III-4	More general central limit theorems . . . . .	286
<b>Appendix IV Dependent Random Variables: Covariance and Correlation</b>		
IV-1	Covariance . . . . .	288
IV-2	Properties of covariance . . . . .	288
IV-3	Correlation . . . . .	290
<b>Appendix V Variances of Sums of Random Variables</b>		
V-1	Variance of $X + Y$ and of $X - Y$ . . . . .	292
V-2	Variance of the sum of $n$ random variables . . . . .	293
V-3	Variance of weighted sums . . . . .	295
V-4	Sums and differences of independent normal random variables . . . . .	296
V-5	Sums and differences of correlated normal random variables . . . . .	297
<b>Appendix VI Sampling Theory</b>		
VI-1	Sampling with replacement . . . . .	298
VI-2	Sampling without replacement . . . . .	300
<b>Appendix VII Confidence Limits and Significance Testing</b>		
VII-1	The general idea of statistical inference . . . . .	303
VII-2	Confidence limits and significance tests on $\mu$ ; known $\sigma$ . . . . .	305
VII-3	Confidence limits and significance tests on $\mu$ ; unknown $\sigma$ , large samples . . . . .	306
VII-4	Confidence limits and significance tests with small samples; the $t$ -distributions. . . . .	306
VII-5	Differences between means; two samples, known $\sigma$ 's . . . . .	308
VII-6	Differences between means; two samples, unknown $\sigma$ 's . . . . .	309
<b>Tables</b>		
A-1	Normal curve areas . . . . .	313
A-2	Inverse of cumulative normal . . . . .	314
A-3	Probability levels of $t$ -distribution . . . . .	315
A-4	Values of chi-squares . . . . .	316
A-5	Cumulative binomial distribution . . . . .	318

A-6	Cumulative binomial for $p = \frac{1}{2}$ .	324
A-7	Multinomial distribution	328
A-8	Poisson distribution	333
A-9	Probabilities for Mann-Whitney, $T$	337
A-10	$\mu$ and $\sigma$ for Mann-Whitney, $T$	339
A-11	Probabilities for Wilcoxon, $W$ and $W_S$	340
A-12	$\sigma$ for Wilcoxon, $W$	342
A-13	Probabilities for $D$ and $R_S$	343
A-14	Probabilities for Kruskal-Wallis, $H$	344
A-15	Probabilities for Friedman, $\chi_r^2$	354
A-16	Expected values of order statistics	356
A-17	Covariances between order statistics	360
A-18	Divisors for the range	363
A-19	Ordinates of the normal	364
A-20	Squares	365
A-21	Square roots	366
A-22	1000 random digits	367
A-23	200 random normal deviates	368
