<i>Chapter</i>		<i>Page</i>
	Introductory Note	xiii
	Glossary of Abbreviations	xvi
1	Frequency Distributions	1
	Frequency distributions, <b>1.5</b> ; Discrete variates, <b>1.9</b> ; Continuous variates, <b>1.10</b> ; Stem-and-leaf plots <b>1.14</b> ; Frequency functions and distribution functions, <b>1.15</b> ; Density smoothing, <b>1.21</b> ; Excursus on integrals, <b>1.22</b> ; Variate-transformations, <b>1.26</b> ; The genesis of frequency distributions, <b>1.28</b> ; Multivariate distributions, <b>1.30</b> ; The bivariate case: conditional distributions, <b>1.32</b> ; Marginal distributions, <b>1.33</b> ; Independence, <b>1.34</b> ; Frequency-generating functions, <b>1.37</b> ; Exercises 1.1–1.24.	
2	Measures of Location and Dispersion	39
	Location and scale parameters, <b>2.2</b> ; Measures of location; the arithmetic mean, <b>2.3</b> ; The geometric and harmonic means, <b>2.5</b> ; Comparison of means: standardization and weighting, <b>2.7</b> ; The median, <b>2.8</b> ; The mode, <b>2.10</b> ; Choice of location measure: robustness, <b>2.12</b> ; Quantiles, <b>2.13</b> ; Measures of dispersion, <b>2.16</b> ; Range and interquantile differences, <b>2.17</b> ; Mean deviations, <b>2.18</b> ; Variance and standard deviation, <b>2.19</b> ; Computational procedures, <b>2.20</b> ; Sheppard's corrections, <b>2.21</b> ; Mean difference <b>2.22</b> ; Robust dispersion measures, <b>2.23</b> ; Coefficients of variation: standardization, <b>2.24</b> ; Concentration, <b>2.25</b> ; Mean values in general, <b>2.27</b> ; Inequalities, <b>2.29</b> ; Exercises 2.1–2.31.	
3	Moments and Cumulants	72
	Moments, <b>3.1</b> ; Calculation of moments, <b>3.3</b> ; Moment-generating functions and characteristic functions, <b>3.5</b> ; Absolute moments, <b>3.6</b> ; Factorial moments, <b>3.7</b> ; Evaluation of factorial moments, <b>3.10</b> ; Factorial moment-generating functions, <b>3.11</b> ; Cumulants, <b>3.12</b> ; Relations between moments and cumulants, <b>3.14</b> ; Evaluation of cumulants, <b>3.16</b> ; Factorial cumulants, <b>3.17</b> ; Corrections for grouping (Sheppard's corrections), <b>3.18</b> ; Average corrections <b>3.20</b> ; Sheppard's corrections for factorial moments, <b>3.23</b> ; Bernoulli numbers and polynomials and Gamma function formulae, <b>3.24</b> ; Sheppard's corrections for cumulants, <b>3.25</b> ; Negative and fractional moments, <b>3.26</b> ; Multivariate moments and cumulants, <b>3.27</b> ; Measures of skewness, <b>3.31</b> ; Kurtosis, <b>3.32</b> ; Moments as characteristics of a distribution, <b>3.33</b> ; Inequalities of the Chebyshev type, <b>3.35</b> ; Exercises 3.1–3.30.	
4	Characteristic functions	119
	The Inversion Theorem, <b>4.3</b> ; Conditions for a function to be a characteristic function, <b>4.7</b> ; Limiting properties of distribution and characteristic functions, <b>4.9</b> ; The First Limit Theorem, <b>4.14</b> ; Converse of the First Limit Theorem, <b>4.15</b> ; Multivariate characteristic functions, <b>4.16</b> ; Conditional characteristic functions, <b>4.19</b> ; The problem of moments, <b>4.20</b> ; The Second Limit Theorem, <b>4.29</b> ; Infinitely divisible and stable characteristic functions, <b>4.33</b> ; Exercises 4.1–4.29.	

- 5 Standard Distributions** 155
- The binomial distribution, **5.2**; Tables of the binomial distribution, **5.7**; The Poisson distribution, **5.8**; Tables of the Poisson distribution, **5.9**; Generalizations of the binomial and Poisson, **5.10**; Pólya urn scheme: the hypergeometric distributions, **5.13**; Properties of the hypergeometric distribution, **5.14**; Sequential sampling: the negative binomial distribution, **5.16**; Mixtures of distributions, **5.20**; Distributions modified by the recording process: censoring and truncation, **5.25**; The logarithmic series distribution, **5.28**; The uniform distribution, **5.30**; The Poisson process: exponential and Gamma distributions, **5.31**; The Weibull distribution: failure rate, **5.33**; The normal distribution: c.f. and moments, **5.36**; The normal d.f., **5.37**; Mills' ratio, **5.38**; Tables of the normal distribution, **5.41**; Properties of the normal distribution, **5.42**; Mixtures of normal distributions, **5.44**; Generalizations and extensions, **5.46**; The exponential family of distributions, **5.47**; The multinomial distribution, **5.49**; The bivariate binomial distribution, **5.50**; Generation of multivariate distributions, **5.52**; Distributions on the circle and on the sphere, **5.53**; Exercises 5.1–5.35.
- 6 Systems of Distributions** 210
- Pearson distributions, **6.2**; Chebyshev–Hermite Polynomials, **6.14**; The Gram–Charlier series of Type A, **6.17**; Edgeworth's form of the Type A series, **6.18**; Other expansions, **6.24**; Polynomial transformations to normality, **6.25**; Functional transformations to normality: Johnson distributions, **6.27**; The lognormal distribution, **6.29**; Johnson's  $S_B$  system, **6.32**; Johnson's  $S_U$  system, **6.35**; Burr's distributions, **6.37**; Fitting by frequency moments, **6.39**; Bivariate families of distributions, **6.42**; Exercises 6.1–6.32.
- 7 The Theory of Probability** 254
- The rules of probability, **7.5**; Conditional probability, **7.7**; Equally likely events, **7.9**; Frequency theory of probability, **7.11**; Logical probability, **7.12**; Subjective probability, **7.14**; Countably infinite numbers of events, **7.17**; Probability in a continuum, **7.18**; The concept of the random variable, **7.20**; Joint and conditional distributions, **7.23**; Sums of random variables, **7.25**; Sampling distributions, **7.29**; The Weak Law of Large Numbers, **7.32**; The Strong Law of Large Numbers, **7.34**; The Central Limit theorem, **7.35**; Exercises 7.1–7.24.
- 8 Probability and Statistical Inference** 280
- Bayes' Theorem, **8.2**; Bayes' postulate, **8.4**; Maximum Likelihood, **8.7**; Uninformative priors, **8.13**; Informative priors, **8.15**; Exercises 8.1–8.8.
- 9 Random Sampling** 291
- The sampling problem, **9.1**; Randomness in sampling practice, **9.5**; The technique of random sampling, **9.9**; Random sampling numbers, **9.11**; General sampling problems, **9.18**; Pseudo-random numbers, **9.19**; Random values from specific distributions, **9.22**; Sampling for attributes, **9.28**; Standard error, **9.31**; Exercises 9.1–9.18.

- 10 Standard Errors** 320
- Standard errors of moments, **10.3**; Standard errors of functions of random variables, **10.5**; Standard errors of bivariate moments, **10.9**; Standard errors of quantiles, **10.10**; Standard error of the mean deviation, **10.13**; Standard error of the mean difference, **10.14**; Some commonly required standard errors, **10.15**; The jackknife and the bootstrap, **10.17**; Exercises 10.1–10.28.
- 11 Exact Sampling Distributions** 345
- The analytical method, **11.2**; Order-statistics, **11.4**; The geometrical method, **11.5**; The method of characteristic functions, **11.6**; The distribution of a sum or difference of independent random variables, **11.8**; The distribution of a ratio or product of independent random variables, **11.9**; Edgeworth and saddlepoint approximations for sums, **11.13**; Exercises 11.1–11.32.
- 12 Cumulants of Sampling Distributions—(1)** 384
- Symmetric functions, **12.4**;  $k$ -statistics, **12.6**; Expression of  $k$ -statistics in terms of symmetric products and sums, **12.9**; Sampling cumulants of  $k$ -statistics: the combinatorial rules, **12.12**; Sampling cumulants of  $k$ -statistics: the results, **12.16**; Sampling cumulants of a ratio, **12.18**; Sampling from finite populations, **12.20**; Multiple  $k$ -statistics, **12.22**; Exchangeability, **12.23**; Exercises 12.1–12.22.
- 13 Cumulants of Sampling Distributions—(2)** 425
- Bivariate  $k$ -statistics, **13.2**; Proof of the combinatorial rules, **13.4**; The essential structure of the results, **13.11**; Summary of results, **13.15**; Tables of symmetric functions, **13.18**; Exercises 13.1–13.13.
- 14 Order-Statistics** 445
- Distributions in the continuous case, **14.2**; The distribution function of an order-statistic, **14.3**; Median and quartiles in the standardized normal case, **14.4**; Pearson's expansion, **14.9**; Quantiles and extreme values: asymptotic distributions, **14.11**; Asymptotic distributions of extreme values, **14.13**; The three asymptotes, **14.15**; Bivariate and multivariate extremes, **14.18**; Asymptotic distributions of  $m$ th extreme values, **14.19**; The order-statistics in the normal case, **14.20**; The general case, **14.21**; Joint distribution of two order-statistics, **14.23**; Spacings, **14.24**; Ranges and mid-ranges, **14.25**; The asymptotic distribution of the range, **14.27**; The reduced range and mid-range, **14.29**; Tables for extreme-value distributions, **14.31**; Exercises 14.1–14.27.
- 15 The Multinormal Distribution and Quadratic Forms** 476
- Characteristic function and moments, **15.2**; Linear functions of normal variates, **15.4**; The multinormal integral, **15.5**; Quadratic forms in normal variates, **15.10**; The decomposition of quadratic forms in independent normal variates, **15.16**; Characterizations of the normal distribution, **15.22**; Exercises 15.1–15.27.

16	Distributions Associated with the Normal	506
	The $\chi^2$ distribution, <b>16.2</b> ; Properties of the $\chi^2$ distribution, <b>16.3</b> ; Tables of the $\chi^2$ distribution, <b>16.4</b> ; Square-root and cube-root transformations of $\chi^2$ , <b>16.5</b> ; Student's $t$ -distribution, <b>16.10</b> ; Properties of Student's $t$ -distribution, <b>16.11</b> ; Tables of Student's $t$ -distribution, <b>16.13</b> ; Fisher's $F$ - and $z$ -distributions, <b>16.15</b> ; Properties of the $F$ - and $z$ -distributions, <b>16.17</b> ; Tables of $F$ and $z$ , <b>16.19</b> ; Relations among the distributions, <b>16.22</b> ; The bivariate normal (binormal) distribution, <b>16.23</b> ; The distribution of the sample correlation coefficient, <b>16.24</b> ; Fisher's transformation of $r$ , <b>16.33</b> ; Distribution of regression coefficients in binormal samples, <b>16.35</b> ; A conditional approach, <b>16.37</b> ; Robustness, <b>16.38</b> ; Exercises 16.1–16.29.	
	Appendix Tables	544
	References	556
	Index of Examples in Text	580
	Index (Subjects and Authors)	581
