Preface	<i>page vii</i>
Acknowledgements	<i>xiii</i>
1 Introduction	
1.1 Examples of random variation	15
1.2 One-dimensional frequency distributions	19
1.3 Summarizing quantities	26
1.4 Frequency distributions in two or more dimensions	33
1.5 Some illustrative examples	38
1.6 Populations, samples and probability	44
2 Probability and Probability Distributions	
2.1 Probability	47
2.2 Addition law of probability	48
2.3 Conditional probability and statistical independence	51
2.4 Examples	55
2.5 Discrete random variables	58
2.6 Continuous random variables	63
2.7 Several random variables	75
3 Expectation and its Applications	
3.1 Expectation	79
3.2 Variance	84
3.3 Higher moments	87
3.4 Dependence and covariance	90
3.5 Normal models	93
4 Sampling Distributions and Statistical Inference	
4.1 Statistical inference	101
4.2 Pseudo random deviates	105

4.3 A sampling experiment	110
4.4 Estimation	117
4.5 Significance tests	124
5 Single Sample Problems	
5.1 Introduction	129
5.2 Point estimates of μ and σ^2	130
5.3 Interval estimates for μ (σ^2 unknown)	133
5.4 Interval estimates for σ^2	136
5.5 Significance test for a mean	139
5.6 Significance test for a variance	141
5.7 Departures from assumptions	143
6 Two Sample Problems	
6.1 Introduction	146
6.2 The comparison of two independent sample means	147
6.3 The comparison of two independent sample variances	150
6.4 Analysis of paired samples	152
6.5 An example	155
6.6 Departures from assumptions	160
7 Non-parametric Tests	
7.1 Introduction	162
7.2 Normal approximation to the binomial distribution	162
7.3 The sign test	165
7.4 The signed rank (Wilcoxon one sample) test	169
7.5 Two sample rank (Wilcoxon) test	173
7.6 Discussion	175
8 The Analysis of Discrete Data	
8.1 Introduction	177
8.2 Distributions and approximations	178
8.3 Inference about a single Poisson mean	182
8.4 Inference about a single binomial probability	185
8.5 The comparison of two Poisson variates	186
8.6 The comparison of two binomial variates	188
8.7 Comparison of proportions in matched pairs	193
8.8 Examination of Poisson frequency table	195
8.9 Examination of binomial frequency tables	198
8.10 Comparison of observed and expected frequencies	201
8.11 Contingency tables	206
8.12 A tasting experiment	210

9 Statistical Models and Least Squares	
9.1 General points	216
9.2 An example	218
9.3 Least squares	221
10 Linear Regression	
10.1 Introduction	224
10.2 Least squares estimates	227
10.3 Properties of $\hat{\alpha}$ and $\hat{\beta}$	230
10.4 Predictions from regressions	235
10.5 Comparison of two regression lines	236
10.6 Equally spaced x -values	238
10.7 Use of residuals	239
10.8 Discussion of models	243
11 Multiple Regression	
11.1 Introduction	245
11.2 Theory for two independent variables only	249
11.3 Analysis of Example 11.2	253
11.4 Discussion	259
12 Analysis of Variance	
12.1 The problem	263
12.2 Theory of one-way analysis of variance	267
12.3 Procedure for analysis	270
12.4 Two-way analysis of variance	276
12.5 Linear contrasts	280
12.6 Randomized blocks	285
12.7 Components of variance	289
12.8 Departures from assumptions	294
Miscellaneous Exercises	298
Appendix I Notes on desk computation	307
Appendix II Statistical tables	314
Appendix III Hints to the solution of selected exercises	321
References	338
Author Index	342
Subject Index	344
