Contents

CHAPTER

1. PRELIMINARIES 1

1. Introduction 1
2. Scope 3
3. Format and Organization 7
4. Guide 10

2. THE DICHOTOMOUS DATA PROBLEM 15

1. A Binomial Test 15
2. An Estimator for the Probability of Success 22
3. A Confidence Interval for the Probability of Success (Clopper-Pearson) 23

3. THE ONE-SAMPLE LOCATION PROBLEM 26

Paired Replicates Analyses by Way of Signed Ranks 27

1. A Distribution-Free Signed Rank Test (Wilcoxon) 27
2. An Estimator Associated with Wilcoxon's Signed Rank Statistic (Hodges-Lehmann) 33
3. A Distribution-Free Confidence Interval Based on Wilcoxon's Signed Rank Test (Tukey) 35

Paired Replicates Analyses by Way of Signs 39

4. A Distribution-Free Sign Test (Fisher) 39
5. An Estimator Associated with the Sign Statistic 46
6. A Distribution-Free Confidence Interval Based on the Sign Test (Thompson, Savur) 48

One-Sample Data 50

7. Procedures Based on the Signed Rank Statistic 50
8. Procedures Based on the Sign Statistic 54
9. An Asymptotically Distribution-Free Test of Symmetry (Gupta) . 57
10. Efficiencies (One-Sample and Paired Replicates Location Procedures) 64

4. THE TWO-SAMPLE LOCATION PROBLEM 67

1. A Distribution-Free Rank Sum Test (Wilcoxon) 68
2. An Estimator Associated with Wilcoxon's Rank Sum Statistic (Hodges-Lehmann) 75
3. A Distribution-Free Confidence Interval Based on Wilcoxon's Rank Sum Test (Moses) 78
4. Efficiencies (Two-Sample Location Procedures) 82

5. THE TWO-SAMPLE DISPERSION PROBLEM 83

Medians Known or Equal 83

1. A Distribution-Free Rank Test (Ansari-Bradley) 83

Medians Unknown and Unequal 92

2. A Distribution-Free Ranklike Test (Moses). 93
3. An Estimator Associated with Moses' Ranklike Statistic (Shorack) 99
4. A Distribution-Free Confidence Interval Based on Moses' Ranklike Test (Shorack). 101
5. An Asymptotically Distribution-Free Test Based on the Jackknife (Miller) 103
6. Efficiencies (Two-Sample Dispersion Procedures). 112

6. THE ONE-WAY LAYOUT 114

1. A Distribution-Free Test (Kruskal-Wallis). 115
2. A Distribution-Free Test for Ordered Alternatives (Jonckheere, Terpstra) 120
3. Distribution-Free Multiple Comparisons Based on Kruskal-Wallis Rank Sums 124

A. All Treatment Comparisons, 124

B. Treatments Versus Control, 129

4. A Contrast Estimator Based on Hodges-Lehmann Two-Sample Estimators (Spjøtvoll) 133
5. Efficiencies (One-Way Layout Procedures) 136

7. THE TWO-WAY LAYOUT 138

Analyses Associated with Friedman Rank Sums 138

1. A Distribution-Free Test (Friedman, Kendall, and Babington Smith) 139
2. A Distribution-Free Test for Ordered Alternatives Based on Friedman Rank Sums (Page) 147
3. Distribution-Free Multiple Comparisons Based on Friedman Rank Sums 151

   A. All Treatment Comparisons, 151

   B. Treatments Versus Control, 155

4. A Contrast Estimator Based on One-Sample Median Estimators (Doksum) 158

Analyses Associated with Wilcoxon Signed Ranks 162

5. An Asymptotically Distribution-Free Test (Doksum) 162
6. An Asymptotically Distribution-Free Test for Ordered Alternatives Based on Signed Ranks (Hollander) 167
7. Asymptotically Distribution-Free Multiple Comparisons Based on Signed Ranks 171

   A. All Treatment Comparisons, 171

   B. Treatments Versus Control, 173

8. A Contrast Estimator Based on One-Sample Hodges-Lehmann Estimators (Lehmann) 178
9. Efficiencies (Two-Way Layout Procedures) 182

8. THE INDEPENDENCE PROBLEM 185

1. A Distribution-Free Test for Independence (Kendall) . . . 185
2. An Estimator Associated with the Kendall Statistic (Kendall) . 194
3. An Asymptotically Distribution-Free Confidence Interval Based on the Kendall Statistic (Noether) 195
4. Efficiencies (Independence Procedures) 198

9. REGRESSION PROBLEMS INVOLVING SLOPES 200

One Regression Line 200

1. A Distribution-Free Test for the Slope Coefficient (Theil) . . 201
2. An Estimator Associated with the Theil Statistic (Theil) . . 205
3. A Distribution-Free Confidence Interval Based on the Theil Test (Theil) 207

Two Regression Lines 208

4. A Distribution-Free Test for the Parallelism of Two Regression Lines (Hollander) 209
5. An Estimator Associated with Hollander's Statistic . . . 214
6. A Distribution-Free Confidence Interval Based on Hollander's Test 216
7. Efficiencies (Regression Procedures for Slopes) 217

10. Tests Designed to Detect Broad Alternatives 219

1. A Distribution-Free Test for the Two-Sample Problem (Kolmogorov-Smirnov) 219
2. A Distribution-Free Test for Independence (Hoeffding) . . 228
3. A Distribution-Free Test for Bivariate Symmetry (Hollander) . 236
4. A Distribution-Free Test for "New Better than Used" Alternatives (Hollander-Proschan) 246
5. Efficiencies (Tests Designed to Detect Broad Alternatives) . . 252
