CHAPTER

1	INTRODUCTION	1
1.1	The Place of Statistical Methods	1
1.2	The Nature of Statistical Methods	2
1.3	Some Problems to Which Statistical Methods can be Applied	3
1.31	Reliability of Measurements	3
1.32	Estimation and Tests of Significance	4
1.33	Relationships between Factors	4
1.34	Danger of Misapplication of Methods	5
2	DESCRIPTIVE STATISTICS	6
2.1	Introduction	6
2.2	Organization of Data	6
2.21	Raw Data	6
2.22	Grouping of Data	10
2.3	Some Simple Statistics	16
2.31	Statistics	16
2.32	Statistics Used to Determine Location	16
2.33	Statistics Used to Determine Dispersion	18
2.34	Relative Merits of the Statistics Given	20
2.35	Numerical Calculation	21
2.36	Interpretation of Mean and Standard Deviation	26
2.4	Limits for Means and Medians	26
2.41	Variance of Means	26
2.42	Degrees of Freedom	27
2.43	Limits for the Mean	28
2.44	Limits for the Median	30
2.5	Associated Measurements	31
2.51	Pairs of Measurements. Scatter Diagrams	31
2.52	Covariance	35
2.53	Regression and Correlation	36
2.54	Limits for the Slope	38
3	PROBABILITY AND SAMPLES	41
3.1	Introduction	41
3.2	Probability and Random Variables	42
3.21	Population and Random Variables	42
3.22	Probability	43
3.23	Laws of Probability, Independence	45

CHAPTER

3.3	Average Values and Variances	46
3.31	One Random Variable	46
3.32	Two Random Variables	48
3.33	Average Value and Variance of a Linear Combination.	49
3.34	Approximate Average Value and Variance of an Arbitrary Function	51
3.35	Population and Sample	54
3.4	Samples	55
3.41	Random Sampling	55
3.42	Average Value and Variance of a Sample Mean	55
3.43	Average Value of the Sample Variance	57
3.44	Sampling from Finite Populations	57
3.5	Stratified Sampling	61
3.51	Estimating the Mean	61
3.52	Minimizing the Variance	62
3.53	The Case of Infinite Subpopulations	64
APPENDIX 3A	PERMUTATIONS AND COMBINATIONS	66
3A.1	Permutations	66
3A.2	Combinations	66
4	MATHEMATICAL MACHINERY	68
4.1	Introduction	68
4.2	Distribution Functions	68
4.21	Cumulative Distribution Function	68
4.22	Relationships between Cumulative Distribution Function and Probabilities	70
4.23	Discrete Probability Distribution. Probability Density Function	71
4.24	Joint Cumulative Distribution Function of Two Variables	73
4.25	Discrete Probability Distributions and Probability Density Function of Two Variables	74
4.26	Distributions in More than Two Variables	76
4.3	Moments, Semi-Invariants, and Generating Functions	76
4.31	Moments and Moment Generating Functions	76
4.32	Semi-Invariants	79
4.33	Calculation and Interpretation of Semi-Invariants	80
4.4	The Normal Distribution	83
4.41	The Normal Distribution Function	83
4.42	Distribution of a Linear Combination of Normally Distributed Variables	88
4.43	The Central Limit Theorem	89
4.44	Transformations to Approximate Normality	91
4.45	Tests for Non-Normality	92
4.46	The χ^2 -Distribution	95
4.5	Sampling from the Normal Distribution	99
4.51	Distribution of Sample Mean	99
4.52	Independence of Linear Combinations	101

CHAPTER

4.53	Distribution of the Sample Variance	102
4.54	The "Student" t -Distribution	105
4.55	The Distribution of the Ratio of Two Variances	108
4.56	Distribution of Other Sample Statistics	110
4.6	Discrete Probability Distributions	111
4.61	Binomial Distribution	111
4.62	Multinomial Distribution	114
4.63	Poisson Distribution	115
4.64	Limiting Forms of the Binomial and Poisson Distributions	118
4.65	Hypergeometric Distribution	120
APPENDIX 4A	GAMMA AND BETA FUNCTIONS	122
4A.1	Gamma Functions	122
4A.2	Beta Functions	125
4A.3	Incomplete Gamma Function	125
4A.4	Incomplete Beta Function	126
APPENDIX 4B	THE NORMAL BIVARIATE DISTRIBUTION	128
5	STATISTICAL INFERENCE	133
5.1	Introduction	133
5.2	General Principles of Statistical Inference	134
5.21	Point Estimation and Efficiency	134
5.22	Confidence Intervals	136
5.23	Example of the Determination of Confidence Limits	137
5.24	Tests of Significance	140
5.25	Example of a Test of Significance	142
5.26	Confidence and Significance Levels	148
5.3	Inferences about Averages	149
5.31	Point Estimates	149
5.32	Point Estimates for Linear Combinations	152
5.33	Confidence Intervals and Tests of Significance Using the t -Distribution	153
5.34	Confidence Intervals and Tests of Significance Based on Order Statistics	157
5.35	Distribution-Free Tolerance Limits	162
5.4	Inferences about the Variance	164
5.41	Point Estimates	164
5.42	Joint Estimates from Several Samples	166
5.43	Confidence Intervals and Tests of Significance for the Variance	172
5.5	Comparison of Means	176
5.51	Comparison of Two Means	176
5.52	Paired Comparisons	180
5.53	Comparison of More than Two Means	185
5.6	Comparison of Variances	192
5.61	Comparison of Two Variances	192
5.62	Tests for the Homogeneity of Several Variances	196
5.7	Sequential Tests	200
5.8	Measurement Errors	206

CHAPTER

APPENDIX 5A	MAXIMUM LIKELIHOOD ESTIMATION	209
5A.1	Method of Maximum Likelihood	209
5A.2	Examples of Determination of Maximum Likelihood Estimates	211
5A.3	Relation of the Principle of Least Squares to Maximum Likelihood	214
6	RELATIONSHIPS BETWEEN VARIABLES	216
6.1	Introduction	216
6.11	Pairs of Measurements of Observations	216
6.12	Ways in which Pairs of Measurements can Occur	220
6.2	Linear Regression with One Dependent Variable	223
6.21	Statistical Model for Linear Regression	223
6.22	Estimation of α and β	223
6.23	Confidence Limits and Tests of Significance for β	227
6.24	Confidence Limits and Tests of Significance for Predicted Values	228
6.25	Estimation of β when $\alpha = 0$	232
6.26	Transformation of Variables to Obtain Linear Regressions	234
6.27	Unequal Residual Variances in Regression Analysis	243
6.3	Multiple Regression	245
6.31	Linear Regression with More than One Independent Variable	245
6.32	Polynomial Regression on Equally Spaced Observations	255
6.33	Orthogonal Combinations in Multiple Regression	265
6.4	Correlation	273
6.41	Estimation of the Correlation Coefficient	273
6.42	Estimation of the Regression Lines	280
6.43	Rank Correlation	283
6.44	Correlations of Three or More Variables	286
6.45	Discriminant Functions	288
APPENDIX 6A	THE SOLUTION OF REGRESSION EQUATIONS	296
6A.1	Introduction	296
6A.2	Exact Solution of Linear Equations. Evaluation of Determinants	296
6A.3	Method of Single Division. The Abbreviated Doolittle Method	302
6A.4	Solution of Sets of Equations. Computation of Inverse Elements	315
7	ANALYSIS OF VARIANCE	319
7.1	Introduction	319
7.2	Basic Analysis of a One-Way Classification	319
7.21	Example	319
7.22	General Model for One-Way Classification with Equal Numbers	321
7.23	Computations	323
7.24	Unequal Numbers of Observations in Each Class	327
7.25	Interpretation of Low F -Ratios	329

CHAPTER

7.3	Other Considerations in One-Way Classification	330
7.31	Interpretation of the Effects ξ_i in the General Model	330
7.32	Estimation of the Effects ξ_i	331
7.33	Comparison of Class Effects	333
7.34	General Linear Comparisons Based on Single Degrees of Freedom	335
7.35	Confidence Limits, Comparisons and Classifications of Means	339
7.36	Testing Hypotheses Concerning the Overall Mean	344
7.4	Models and Populations	348
7.41	Introduction	348
7.42	One-Way Classifications	348
7.43	Two-Way Classifications	349
7.431	Simple Crossed Classifications with No Interaction	349
7.432	Nested Classifications	350
7.433	Many-Way Classifications	350
7.44	The Effect of Failure in the Assumptions Concerning the Model Parameters	351
7.45	Transformation of Data	355
7.5	Two-Way Classifications	358
7.51	Types of Two-Way Classifications	358
7.52	Analysis of Two Nested Classifications	358
7.53	Analysis of Two Crossed Classifications	368
7.54	Missing Data	379
7.6	Greater Numbers of Classifications	385
7.61	General Consideration of Three Crossed Classifications	385
7.62	General Considerations for Nested Classifications	402
7.63	Analyses Involving Both Types of Classifications	410
7.7	Application of the Analysis of Variance to Regression	427
7.71	Simple Linear Regression	427
7.72	Analysis of Variance for Linear Regression in More than One Variable	429
7.73	Analysis of Variance for Polynomial Regression	431
7.74	Subdivision of Scale Classifications	436
7.8	Analysis of Covariance	441
7.81	Introduction	441
7.82	Differences between Slopes	442
7.83	Treatment Comparisons	446
7.84	Covariance with Multiple Classification	451
7.85	Analysis of Covariance Involving Multiple Regression	457
7.86	Comments on the Application of Analyses of Covariance	461
7.9	Relationship between Variates Each Including a Random Component	463
7.91	Simple Regression with Known Slope	463
7.92	Simple Regression with Slope Unknown	465
7.93	The Use Instrumental Variates	465

APPENDIX 7A	THE AVERAGE VALUES OF VARIANCE COMPONENTS IN MODELS OF TYPE III	470
7A.1	Nested Classifications	470
7A.2	Crossed Classifications	474

CHAPTER

8	THE DESIGN OF EXPERIMENTS	478
8.1	Introduction	478
8.2	General Terminology	479
8.3	Collection of Data	480
8.31	General Considerations	480
8.32	Sampling of Materials	481
8.33	Sampling of Discrete Articles	481
8.34	Stratified Sampling	482
8.35	Sampling of Aggregates	484
8.36	Sample Reduction	485
8.37	Sampling Bias	486
8.38	Replication	487
8.39	Randomization	491
8.4	Factorial Design	493
8.41	Classical and Factorial Designs	493
8.42	The 2^3 Factorial Experiment	496
8.43	The 2^k Factorial Experiment	501
8.44	Designs Involving Factors at Other than Two Levels	502
8.441	Simplified Analysis when Some Factors are at Two Levels	503
8.442	Single Degrees of Freedom in the 3^2 and 3^3 Design	506
8.443	Dummy Comparisons	512
8.5	Elimination of Experimental Error	514
8.51	General Considerations	514
8.52	Replication in Blocks	515
8.53	Latin Squares	521
8.54	Graeco-Latin Squares	526
8.55	Hyper Graeco-Latin Squares	533
8.56	Other Uses of Latin and Graeco-Latin Squares	535
8.6	Confounding	538
8.61	Introduction	538
8.62	Split Plots	539
8.63	Confounding of Interactions	545
8.64	Confounding in 3^k and Other Factorial Designs	564
8.65	Incomplete Blocks	570
8.66	Incomplete Latin Squares or Youden Squares	575
8.7	Limiting the Number of Experimental Units	580
8.71	Introduction	580
8.72	Fractional Replication	581
8.73	The Use of Latin Squares and Hypersquares	587
8.74	Other Types of Design	592
8.8	Combined Experiments	597
8.81	General Discussion	597
8.82	Raw Materials	598
8.83	Time Effects and Sequential Experiments	599

CHAPTER

9	ANALYSIS OF COUNTED DATA.	601
9.1	Introduction	601
9.2	Transformation of Counted Data	601
9.3	Inferences from Counted Data	603
9.31	Estimation of the Probability p of Success	603
9.32	Estimation of the Expected Value λ	607
9.33	Comparison of Counts	611
9.34	Analysis of Variance for Counted Data	615
9.4	Chi-Square Tests	620
9.41	Chi-Square Test of Goodness of Fit	620
9.42	Contingency Tables	623
9.43	Tests of Homogeneity of Observed Counts	626
9.5	Acceptance Sampling by Attributes	627
10	CONTROL CHARTS	631
10.1	Introduction	631
10.2	Statistical Control	631
10.21	The Concept of Statistical Control	631
10.22	The Concept of Control Limits	633
10.3	Control Charts for Variables	634
10.31	Rational Subgroups	634
10.32	Control Charts for Specified Quality Levels	635
10.33	Control Charts when No Levels are Specified	638
10.34	Discussion of the Use of Control Charts	642
10.4	Control Charts for Attributes	644
10.41	Control Charts	644
10.42	Control Charts for Number Defective	646
10.5	Control Charts for Errors of Measurement	647
10.51	The Need for the Control of Measurement Errors	647
10.52	Control Charts for Accuracy	648
10.53	Control Charts for Precision	650
10.54	Special Control Charts for Duplicate Analysis	654
10.55	Control Charts for Counting Instruments	659
11	SOME TESTS FOR RANDOMNESS	663
11.1	The Concept of Randomness	663
11.2	Extreme Variations	665
11.21	Use of Control Charts to Detect Extreme Variations	665
11.22	Rejection of Observations	666
11.3	Use of Runs to Detect Non-Randomness	667
11.31	Relationship of Runs to Non-Randomness	667
11.32	Distribution of Number of Runs	669
11.33	Other Uses of the Theory of Runs	677
11.34	Use of Mean Square Successive Difference to Detect Non-Randomness	677
11.35	Use of the Serial Correlation to Detect Non-Randomness	684
11.36	Choice of Tests for Non-Randomness	688

CHAPTER

APPENDIX	689
Table I Ordinates and Areas of the Normal Distribution	689
Table II Percentage Points of the χ^2 -Distribution	694
Table III Percentage Points of the t -Distribution	696
Table IV Percentage Points of the F -Distribution	698
