

## CONTENTS

<b>CHAPTER 1. INTRODUCTION . . . . .</b>	<b>1</b>
1-1 Algebraic functions and Riemann surfaces . . . . .	1
1-2 Plane fluid flows . . . . .	12
1-3 Fluid flows on surfaces . . . . .	18
1-4 Regular potentials . . . . .	25
1-5 Meromorphic functions . . . . .	30
1-6 Function theory on a torus . . . . .	34
<b>CHAPTER 2. GENERAL TOPOLOGY . . . . .</b>	<b>42</b>
2-1 Topological spaces . . . . .	42
2-2 Functions and mappings . . . . .	50
2-3 Manifolds . . . . .	53
<b>CHAPTER 3. RIEMANN SURFACE OF AN ANALYTIC FUNCTION . . . . .</b>	<b>63</b>
3-1 The complete analytic function . . . . .	63
3-2 The analytic configuration . . . . .	69
<b>CHAPTER 4. COVERING MANIFOLDS . . . . .</b>	<b>76</b>
4-1 Covering manifolds . . . . .	76
4-2 Monodromy theorem . . . . .	80
4-3 Fundamental group . . . . .	83
4-4 Covering transformations . . . . .	92
<b>CHAPTER 5. COMBINATORIAL TOPOLOGY . . . . .</b>	<b>95</b>
5-1 Triangulation . . . . .	95
5-2 Barycentric coordinates and subdivision . . . . .	100
5-3 Orientability . . . . .	106
5-4 Differentiable and analytic curves . . . . .	114
5-5 Normal forms of compact orientable surfaces . . . . .	117
5-6 Homology groups and Betti numbers . . . . .	124
5-7 Invariance of the homology groups . . . . .	128
5-8 Fundamental group and first homology group . . . . .	129
5-9 Homology on compact surfaces . . . . .	139
<b>CHAPTER 6. DIFFERENTIALS AND INTEGRALS . . . . .</b>	<b>145</b>
6-1 Second-order differentials and surface integrals . . . . .	145
6-2 First-order differentials and line integrals . . . . .	151
6-3 Stokes' theorem . . . . .	158
6-4 The exterior differential calculus . . . . .	163
6-5 Harmonic and analytic differentials . . . . .	168

<b>CHAPTER 7. THE HILBERT SPACE OF DIFFERENTIALS.</b>	. . . . .	178
7-1 Definition and properties of Hilbert space	. . . . .	178
7-2 Smoothing operators	. . . . .	189
7-3 Weyl's lemma and orthogonal projections	. . . . .	195
<b>CHAPTER 8. EXISTENCE OF HARMONIC AND ANALYTIC DIFFERENTIALS</b>	. . . . .	207
8-1 Existence theorems	. . . . .	207
8-2 Countability of a Riemann surface	. . . . .	215
<b>CHAPTER 9. UNIFORMIZATION</b>	. . . . .	219
9-1 Schlichtartig surfaces	. . . . .	219
9-2 Universal covering surfaces	. . . . .	225
9-3 Triangulation of a Riemann surface	. . . . .	239
9-4 Mappings of a Riemann surface onto itself	. . . . .	242
<b>CHAPTER 10. COMPACT RIEMANN SURFACES</b>	. . . . .	249
10-1 Regular harmonic differentials	. . . . .	249
10-2 The bilinear relations of Riemann	. . . . .	251
10-3 Bilinear relations for differentials with singularities	. . . . .	256
10-4 Divisors	. . . . .	261
10-5 The Riemann-Roch theorem	. . . . .	264
10-6 Weierstrass points	. . . . .	269
10-7 Abel's theorem	. . . . .	275
10-8 Jacobi inversion problem	. . . . .	281
10-9 The field of algebraic functions	. . . . .	286
10-10 The hyperelliptic case	. . . . .	292
<b>REFERENCES</b>	. . . . .	301
<b>INDEX</b>	. . . . .	305
