CONTENTS

System of Referencing iv
Preface v
Acknowledgements vii

CHAPTER I
HISTORICAL DEVELOPMENT

1. Elliptic Functions and Elliptic Modular Functions 2
2. Founding of the Theory of Automorphic Functions . . . 19
3. Uniformization 28
4. Developments since 1920 29

CHAPTER II
PREPARATORY MATERIAL

1. Sets 44
2. Topological Spaces 45
3. Mappings 49
4. Hilbert Space 52
5. Groups 54
6. Topological Groups 58
7. Analytic and Harmonic Functions 59
8. Conformal Mapping 65
9. Linear Transformations 69
10. The Isometric Circle 74
11. Groups of Linear Transformations 77
12. Hyperbolic Geometry 78
13. Miscellaneous 82

CHAPTER III
DISCONTINUOUS GROUPS

1. Discontinuity 85
2. The Transformations in a Discontinuous Group 91
3. Discreteness 95
4. The Limit Points of Γ 102
5. Regions of Discontinuity 105

Chapter IV

THE FUNDAMENTAL REGION

1. Existence and First Properties 111
2. Free Products of Groups 118
3. The Boundary of the Fundamental Region 120
4. Cycles 125
5. Function Groups 134
6. Principal-Circle Groups: Isometric Circles 141
7. Principal-Circle Groups: Hyperbolic Geometry 146

Chapter V

AUTOMORPHIC FUNCTIONS AND FORMS

1. Definition and First Properties 156
2. The Poincaré Series 158
3. Existence of Automorphic Functions and Forms 162
4. The Valence of an Automorphic Function 166
5. Principal-Circle Groups 176
6. Algebraic and Differential Relations 185

Chapter VI

RIEMANN SURFACES

1. Riemann Surfaces 189
2. Functions and Differentials on the Riemann Surface 193
3. Discontinuous Groups and Riemann Surfaces 198
4. Existence of Automorphic Functions and Forms 211
5. The Algebraic Field of Automorphic Functions 217

Chapter VII

THE STRUCTURE OF DISCONTINUOUS GROUPS

1. Generation of Principal-Circle Groups by Geometrical and Number-Theoretical Methods 220
2. The Relations in Γ 230
3. Construction of Principal-Circle Groups of Given Signature 235
4. The Canonical Polygon 241
5. Representations of Discontinuous Groups 246
6. Subgroups 249
7. Subgroups and Subfields 261

Chapter VIII
FORMS OF NEGATIVE DIMENSION

1. Introduction 266
2. H-Groups 269
3. Automorphic Forms; Poincaré Series 272
4. The Hilbert Space of Cusp Forms 284
5. Applications of the Scalar Product Formula 289
6. A Basis for $\mathfrak{C}^0$ 293
7. The Fourier Coefficients 294

Chapter IX
FORMS OF POSITIVE AND ZERO DIMENSION

1. Existence Theorems 300
2. The Fourier Coefficients 302
3. Expansions of Zero 315

Chapter X
TRANSITIVITY

1. Introduction 321
2. Invariant Sets on the Unit Circle 322
3. Almost Every Point of the Unit Circle is Transitive 324
4. The Automorphic Function near the Boundary 331
5. Diophantine Approximation 334

Chapter XI
THE MODULAR GROUP AND MODULAR FUNCTIONS

1. Modular Forms 337
2. Additive Analytic Number Theory 350
3. Subgroups 355
4. Arithmetic Properties of $j(\tau)$ 366

Chapter XII
AUTOMORPHIC FUNCTIONS OF SEVERAL COMPLEX VARIABLES

1. The Space $\mathfrak{U}$ and its Analytic Mappings 378
2. Discontinuous Groups 382
3. Analytic Functions of n Complex Variables 384
4. The Fundamental Region 388
5. Poincaré Series 389
6. Automorphic Functions 391
7. The Field of Automorphic Functions 394
