

Contents

Introduction, 1

Chapter 1 Elementary Probability Theory, 6

1.1 The Meaning of Probability. 1.2 Elementary Set Theory and Operations. 1.3 Fundamental Probability Rules. 1.4 Bayes' Theorem. 1.5 Counting Principles and Techniques.

Chapter 2 Discrete Random Variables and Probability Distributions, 72

2.1 Random Variables. 2.2 Probability Distributions of Discrete Random Variables. 2.3 The Uniform Distribution. 2.4 The Binomial Distribution. 2.5 The Multinomial Distribution. 2.6 The Hypergeometric Distribution. 2.7 The Poisson Distribution. 2.8 Joint Probability Distributions.

Chapter 3 Empirical Frequency Distributions, 138

3.1 Frequency Distributions. 3.2 Construction of a Frequency Distribution. 3.3 Class Limits. 3.4 Other Considerations in Constructing Frequency Distributions. 3.5 Graphic Presentation of Frequency Distributions. 3.6 Cumulative Frequency Distributions. 3.7 Descriptive Measures for Frequency Distributions. 3.8 The Arithmetic Mean. 3.9 The Weighted Arithmetic Mean. 3.10 The Median. 3.11 Characteristics and Uses of the Arithmetic Mean and Median. 3.12 The Mode. 3.13 Comparison of Averages. 3.14 The Geometric Mean. 3.15 Dispersion — Distance Measures. 3.16 Dispersion — Average Deviation Methods. 3.17 Relative Dispersion — Coefficient of Variation. 3.18 Errors of Predictions.

Chapter 4 Theoretical Frequency Distributions, 209

4.1 Mathematical Expectation. 4.2 Expected Value of a Function of a Random Variable. 4.3 Moments of Probability Distributions. 4.4 Variance of a Function of a Random Variable.

Chapter 5 Statistical Investigations and Sampling, 235

5.1 Formulation of the Problem. 5.2 Design of the Investigation. 5.3 Construction of Methodology. 5.4 Some Fundamental Concepts. 5.5 Fundamentals of Sampling.

Chapter 6 Sampling Distributions, 261

6.1 Sampling Distribution of Number of Occurrences. 6.2 Sampling Distribution of a Proportion. 6.3 Continuous Distributions. 6.4 The Normal Distribution. 6.5 Sampling Distribution of the Mean.

Chapter 7 Statistical Decision Procedures — Hypothesis Testing, 304

7.1 Introduction — Rationale of Hypothesis Testing. 7.2 One-Sample Tests (Large Samples). 7.3 Two-Sample Tests (Large Samples). 7.4 The t -distribution — Population Standard Deviation(s) Unknown. 7.5 The Design of a Test to Control Both Type I and Type II Errors. 7.6 The t -test for Paired Observations. 7.7 Summary and Looking Ahead.

Chapter 8 Statistical Decision Procedures — Estimation, 366

8.1 Point and Interval Estimation. **8.2** Criteria of Goodness of Estimation. **8.3** Maximum Likelihood Estimation. **8.4** Confidence Interval Estimation. **8.5** Determination of Sample Size. **8.6** Other Probability Sample Designs. **8.7** The Balancing of Errors. **8.8** The Bayesian Decision Theory Approach.

Chapter 9 Chi-Square Tests and Analysis of Variance, 413

9.1 Goodness of Fit Tests. **9.2** Tests of Independence. **9.3** k Sample Tests for Proportions. **9.4** Analysis of Variance: k Sample Tests for Means.

Chapter 10 Regression and Correlation Analysis, 459

10.1 Introduction. **10.2** Scatter Diagrams. **10.3** Purposes of Regression and Correlation Analysis. **10.4** Estimation Using the Regression Line. **10.5** The Standard Error of Estimate. **10.6** Additional Topics in Regression Analysis. **10.7** Correlation Analysis—Measures of Association. **10.8** Inference About Population Parameters in Regression and Correlation. **10.9** Other Interval Estimates. **10.10** Caveats and Limitations. **10.11** Multiple Regression and Correlation Analysis. **10.12** A Case Study.

Chapter 11 Time Series, 539

11.1 Introduction. **11.2** The Classical Time Series Model. **11.3** Description of Secular Trend. **11.4** The Fitting of Trend Lines by the Method of Least Squares. **11.5** Measurement of Seasonal Variations. **11.6** Forecasting Method.

Chapter 12 Index Numbers, 585

12.1 The Nature and Use of Index Numbers. **12.2** General Problems of Index Number Construction. **12.3** Aggregative Price Indices. **12.4** Average of Relatives Indices. **12.5** Quantity Indices. **12.6** Deflation of Value Series by Price Indices. **12.7** Selected Considerations in the Use of Index Numbers.

Chapter 13 Decision Making Using Prior Information, 614

13.1 Introduction. 13.2 Structure of the Decision-Making Problem.
13.3 An Illustrative Example. 13.4 Criteria of Choice. 13.5 Ex-
pected Value of Perfect Information. 13.6 Decision Diagram Repre-
sentation. 13.7 Decision Making Based on Expected Utility.

**Chapter 14 Decision Making
Using Both Prior and Sample Information, 653**

14.1 Introduction. 14.2 Posterior Analysis. 14.3 Two-Action
Problems with Linear Payoff Functions.

**Chapter 15 Decision Making —
Devising Optimal Strategies Prior to Sampling, 684**

15.1 Introduction. 15.2 Preposterior Analysis. 15.3 Extensive and
Normal Form Analyses. 15.4 Comparison of Extensive and Normal
Form Analyses. 15.5 Sensitivity Analysis. 15.6 An Acceptance
Sampling Example. 15.7 Optimal Sample Size. 15.8 General
Comments.

Chapter 16 Sequential Decision-Making Procedures, 724

16.1 Introduction 16.2 A New Product Development Problem.

**Chapter 17 Comparison of Classical Statistical Inference
and Bayesian Decision Theory, 741**

17.1 Introduction. 17.2 A Comparative Problem. 17.3 A More
Complete Comparative Problem. 17.4 Classical and Bayesian Estima-
tion.

Bibliography, 770

Appendix A Tables, 773

Appendix B Symbols, Subscripts, and Summations, 801

Appendix C Properties of Expected Values and Variances, 806

Index, 810
