Preface to the Second Edition	vii
Preface to the First Edition	ix
1 Introduction	1
1.1 Random Vectors and Matrices	3
1.2 Multivariate Normal Distributions	5
1.3 Distributions of Quadratic Forms	8
1.4 Additional Exercises	12
2 Estimation	16
2.1 Estimability	17
2.2 Estimation: Least Squares	20
2.3 Estimation: Best Linear Unbiased	23
2.4 Estimation: Maximum Likelihood	25
2.5 Estimation: Minimum Variance Unbiased	25
2.6 Sampling Distributions of Estimates	27
2.7 Weighted Least Squares	28
2.8 Normal Equations	33
2.9 Bayesian Estimation	33
2.9.1 Distribution Theory	38
2.10 Additional Exercises	42

3	Testing Hypotheses	45
3.1	More About Models	46
3.2	Testing Models	47
3.2.1	Breaking Up Sums of Squares	54
3.2.2	A Generalized Test Procedure	56
3.3	Testing Linear Parametric Functions	58
3.3.1	A Generalized Test Procedure	62
3.3.2	Testing an Unusual Class of Hypotheses	64
3.4	Testing Single Degrees of Freedom in a Given Subspace	66
3.5	Discussion	67
3.6	Breaking a Sum of Squares into Independent Components	68
3.7	Confidence Regions	73
3.8	Tests for Weighted Least Squares Models	74
3.9	Additional Exercises	77
4	One-Way ANOVA	79
4.1	Analysis of Variance	80
4.2	Estimating and Testing Contrasts	88
4.3	Additional Exercises	92
5	Multiple Comparison Techniques	94
5.1	Scheffé's Method	95
5.2	Least Significant Difference Method	100
5.3	Bonferroni Method	101
5.4	Tukey's Method	102
5.5	Multiple Range Tests: Newman–Keuls and Duncan	103
5.6	Summary	105
5.7	Additional Exercises	107
6	Regression Analysis	110
6.1	Simple Linear Regression	111
6.2	Multiple Regression	112
6.3	Best Linear Prediction: Another Approach to Regression	117
6.4	Multiple Correlation and the Coefficient of Determination	122
6.5	Partial Correlation Coefficients	124
6.6	Testing Lack of Fit	127
6.6.1	The Traditional Test	127
6.6.2	Near Replicate Lack of Fit Tests	129
6.6.3	Partitioning Methods	132
6.7	Polynomial Regression and One-Way Analysis of Variance	135
6.8	Additional Exercises	139
7	Multifactor Analysis of Variance	143
7.1	Balanced Two-Way ANOVA Without Interaction	143
7.1.1	Contrasts	149

7.2	Balanced Two-Way ANOVA with Interaction	150
7.2.1	Interaction Contrasts	153
7.3	Polynomial Regression and the Balanced Two-Way ANOVA	159
7.4	Two-Way ANOVA with Proportional Numbers	163
7.5	Two-Way ANOVA with Unequal Numbers: General Case .	164
7.6	Three or More Way Analyses	173
7.7	Additional Exercises	180
8	Experimental Design Models	183
8.1	Completely Randomized Designs	184
8.2	Randomized Complete Block Designs: Usual Theory . . .	184
8.3	Latin Square Designs	185
8.4	Factorial Treatment Structures	189
8.5	Additional Exercises	192
9	Analysis of Covariance	193
9.1	Estimation of Fixed Effects	195
9.2	Estimation of Error and Tests of Hypotheses	196
9.3	Application: Missing Data	200
9.4	Application: Balanced Incomplete Block Designs	202
9.5	Additional Exercises	211
10	Estimation and Testing in General Gauss–Markov Models	213
10.1	BLUEs with an Arbitrary Covariance Matrix	214
10.2	Geometric Aspects of Estimation	220
10.3	Hypothesis Testing	224
10.4	Least Squares Consistent Estimation	229
11	Split Plot Models	237
11.1	A Cluster Sampling Model	238
11.2	Generalized Split Plot Models	243
11.3	The Split Plot Design	251
11.4	Identifying the Appropriate Error	254
11.5	Exercise: An Unusual Split Plot Analysis	259
12	Mixed Models and Variance Components	262
12.1	Mixed Models	263
12.2	Best Linear Unbiased Prediction	264
12.3	Mixed Model Equations	268
12.4	Variance Component Estimation: Maximum Likelihood . .	270
12.5	Maximum Likelihood Estimation for Singular Normal Dis- tributions	274
12.6	Variance Component Estimation: REML	275
12.7	Variance Component Estimation: MINQUE	278
12.8	Variance Component Estimation: MIVQUE	280

12.9	Variance Component Estimation: Henderson's Method 3	281
12.10	Exact F Tests for Variance Components	285
12.10.1	Wald's Test	285
12.10.2	Öfversten's Second Method	286
12.10.3	Comparison of Tests	289
12.11	Recovery of Interblock Information in BIB Designs	291
12.11.1	Estimation	293
12.11.2	Model Testing	296
12.11.3	Contrasts	298
12.11.4	Alternative Inferential Procedures	299
12.11.5	Estimation of Variance Components	301
13	Checking Assumptions, Residuals, and Influential Observations	303
13.1	Leverage	306
13.1.1	Mahalanobis Distances	307
13.1.2	Diagonal Elements of the Projection Operator	309
13.1.3	Examples	310
13.2	Checking Normality	316
13.2.1	Other Applications for Normal Plots	321
13.3	Checking Independence	324
13.3.1	Serial Correlation	325
13.4	Heteroscedasticity and Lack of Fit	331
13.4.1	Heteroscedasticity	331
13.4.2	Lack of Fit	338
13.5	Updating Formulae and Predicted Residuals	342
13.6	Outliers and Influential Observations	346
13.7	Transformations	349
14	Variable Selection and Collinearity	352
14.1	All Possible Regressions and Best Subset Regression	353
14.1.1	R^2	354
14.1.2	Adjusted R^2	354
14.1.3	Mallows's C_p	355
14.2	Stepwise Regression	356
14.2.1	Forward Selection	357
14.2.2	Tolerance	358
14.2.3	Backward Elimination	358
14.2.4	Other Methods	359
14.3	Discussion of Variable Selection Techniques	359
14.4	Defining Collinearity	361
14.5	Regression in Canonical Form and on Principal Components	366
14.5.1	Principal Component Regression	369
14.5.2	Generalized Inverse Regression	369
14.6	Classical Ridge Regression	370
14.7	More on Mean Squared Error	371

Appendix A: Vector Spaces	374
Appendix B: Matrix Results	382
B.1 Basic Ideas	382
B.2 Eigenvalues and Related Results	384
B.3 Projections	389
B.4 Miscellaneous Results	397
B.5 Properties of Kronecker Products and Vec Operators . . .	399
B.6 Tensors	400
Appendix C: Some Univariate Distributions	406
Appendix D: Multivariate Distributions	410
Appendix E: Tests and Confidence Intervals	414
E.1 Confidence Intervals	415
E.2 Hypothesis Testing	416
Appendix F: Equivalent Linear Models	419
F.1 Constrained and Unconstrained Models	420
F.2 Estimable and Nonestimable Constraints	423
Appendix G: Randomization Theory Models	425
G.1 Simple Random Sampling	426
G.2 Completely Randomized Designs	427
G.3 Randomized Complete Block Designs	429
References	433
Author Index	441
Subject Index	445
