

## CONTENTS

Preface	v
1	
INTRODUCTION	1
1.1 Statistics	1
1.2 A Representative Investigation	2
Exercises	5
Reference	6
2	
PROBABILITY	7
2.1 Introduction	7
2.2 Some Interpretations of Probability	7
2.3 Set Operations	10
2.4 Mathematical Theory of Probability	13
2.5 Permutations and Combinations	14
2.6 Fundamental Laws of Probability	17
2.7 Bayes' Formula	19
Exercises	23
Reference	27
3	
UNIVARIATE PARENT POPULATION DISTRIBUTIONS	28
3.1 Specification	28
3.2 Discrete Distributions	29
3.3 Binomial Distribution	29
3.4 Poisson Distribution	31
3.5 Hypergeometric Distribution	33
3.6 Geometric Distribution	34
3.7 Continuous Distributions	35

3.8	Uniform Distribution	38
3.9	Exponential Distribution	38
3.10	Normal Distribution	39
3.11	Probability Distributions as Specialized Mathematical Functions	42
3.12	Some Mathematical Functions Useful as Probability Distributions	43
3.13	Gamma and Beta Distributions	44
	Exercises	46
	References	50
4		
PROPERTIES OF UNIVARIATE DISTRIBUTION FUNCTIONS		52
4.1	Introduction	52
4.2	Mathematical Expectation	52
4.3	Operations with Expected Values	54
4.4	Moments	54
4.5	Moment-generating Functions	57
4.6	Cumulants	61
4.7	An Inverse Problem	63
	Exercises	64
5		
BIVARIATE AND MULTIVARIATE DISTRIBUTIONS AND THEIR PROPERTIES		68
5.1	Introduction	68
5.2	Discrete Bivariate Distributions	68
5.3	Continuous Bivariate Distributions	75
5.4	Distributions of Functions of Discrete Variates	77
5.5	Distributions of Functions of Continuous Variates	79
5.6	Expected Values for Bivariate Distributions	84
5.7	Moments	84
5.8	Moment- and Cumulant-generating Functions	89
5.9	Extension to k Variates	90
5.10	Multinomial Distribution	92
5.11	Multivariate Normal Distribution	95
	Exercises	98
	Reference	103
6		
DERIVED SAMPLING DISTRIBUTIONS		104
6.1	Introduction	104
6.2	Derived Sampling Distribution Problems	105
6.3	Linear Functions	106

6.4	Orthogonal Linear Forms	108
6.5	Linear Forms with Normally Distributed Variates	111
6.6	Distribution of the Sample Mean in Normal Populations	112
6.7	Law of Large Numbers	113
6.8	The Central Limit Theorem	113
6.9	Chi-square Distribution	115
6.10	Simultaneous Distribution of the Sample Mean $\bar{X}$ and the Sample Variance $S^2$	119
6.11	Distribution of $t$	122
6.12	Distribution of $F$	123
6.13	Distributions of Order Statistics	125
	Exercises	127
	References	134
7		
	POINT ESTIMATION	135
7.1	Introduction	135
7.2	Problem of Point Estimation	136
7.3	Unbiasedness	137
7.4	Consistency	138
7.5	Efficiency	140
7.6	Sufficiency	142
7.7	Cramer-Rao Inequality	143
7.8	Amount of Information and a Measure of Efficiency for Small Samples	145
7.9	Principles of Point Estimation	148
7.10	Method of Moments	149
7.11	Principle of Maximum Likelihood	149
7.12	Maximum-likelihood and Efficient Estimators in Small Samples	150
7.13	Maximum-likelihood Estimators for Two or More Parameters	151
7.14	Bayesian Principle	155
7.15	Robust Estimation	158
	Exercises	161
	References	165
8		
	SAMPLING FROM FINITE POPULATIONS	166
8.1	Introduction	166
8.2	Simple Random Sampling and Systematic Sampling	166
8.3	Stratified Random Sampling	170
8.4	Allocation of Sample Sizes	172
8.5	Cluster Sampling	174
	Exercises	178
	References	180

9

INTERVAL ESTIMATION	182
9.1 Introduction	182
9.2 Confidence Intervals	183
9.3 Shortest Confidence Interval	184
9.4 More than One Unknown Parameter	185
9.5 Bayes' Interval	190
Exercises	191
References	194

10

TESTS OF HYPOTHESES	195
10.1 Introduction	195
10.2 The General Problem	195
10.3 Neyman-Pearson Lemma	199
10.4 Power Function for One-parameter Distribution	202
10.5 Composite Hypotheses	206
10.6 Use of Power Function Tables in Planning Experiments	210
10.7 The Likelihood-ratio Criterion	213
10.8 Testing the Equality of Two Means	218
10.9 Behrens-Fisher Problem	220
10.10 Testing the Homogeneity of Variances	223
10.11 Relationship between Testing Hypothesis and Confidence Interval	226
10.12 Sequential Probability Ratio Test	226
Exercises	231
References	235

11

NONPARAMETRIC TESTING PROCEDURES	237
11.1 Introduction	237
11.2 Sign Test	237
11.3 Mann-Whitney-Wilcoxon Test	239
11.4 Goodness of Fit	242
11.5 Contingency Tables	246
11.6 Fisher's Exact Test	250
Exercises	252
References	255

12

INFERENCE BASED ON CONDITIONAL SPECIFICATION	257
12.1 Introduction	257
12.2 Pooling Means	258
12.3 Bayesian Pooling	263
12.4 Behrens-Fisher Problem under Conditional Specification	264
Exercises	266
References	268

13

REGRESSION ANALYSIS	269
13.1 Introduction	269
13.2 Regression of Y on a Single Fixed Variable	273
13.3 Regression of Y on p Fixed Variables	277
13.4 Distribution of $\underline{b}$ under Normality Assumption	280
13.5 Testing Hypotheses about $\underline{\beta}$	281
13.6 Confidence Intervals	288
13.7 Selection of Variables	289
13.8 Pooling Regressions in Prediction	291
Exercises	294
References	299

14

ANALYSIS OF VARIANCE	300
14.1 Introduction	300
14.2 Testing the Equality of Several Means	300
14.3 Two-way Classification with One Observation per Cell	308
14.4 Two-way Classification with n Observations per Cell	312
14.5 Random Effect Models	315
14.6 Models under Conditional Specification	321
Exercises	324
References	327
APPENDIX A MATRIX ALGEBRA	328
A.1 Matrices	328
A.2 Determinant and Inverse	330
A.3 System of Equations	332
A.4 Matrix Differentiation	332
A.5 Quadratic Forms	333
A.6 Partitioned Matrices	334

APPENDIX B	TABLE OF MAXIMUM AND MINIMUM RELATIVE EFFICIENCIES FOR POOLING MEANS	335
APPENDIX C	TABLES OF PROBABILITY DISTRIBUTIONS	340
C.1	Explanation of the Tables	340
C.2	Other Tables	342
ANSWERS TO SELECTED EXERCISES		349
AUTHOR INDEX		351
SUBJECT INDEX		359
