

CONTENTS

Preface

Part 1: Principles, Results and Applications

1 Fundamental Concepts

1.1 Plan of the book	3
1.2 Definitions and terminology	5
1.3 Notation	7
1.4 Cost and regret functions	10
1.5 Prior distributions	15
1.6 Critical quality levels	21
1.7 Systems of sampling inspection plans	26
1.8 Consistency and efficiency	31
1.9 Asymptotic expansions, approximations and tables	32
1.10 Some general remarks	33

2 Single Sampling Plans Based on the OC Function

2.1 Introduction	35
2.2 The three OC functions	36
2.3 Properties of the three OC functions	38
2.4 The ASN function for curtailed inspection	45
2.5 Systems with sample size as a given function of lot size	47
2.6 Sampling plans of given strength	50
2.7 Systems with decreasing risks	53

3 Multiple Sampling Plans

3.1 OC equivalence and ASN efficiency	61
3.2 Double sampling plans	65

3.3	The table of double sampling plans and its applications	70
3.4	Multiple sampling plans	74
3.5	The sequential probability ratio test	76
4	The ISO 2859 Standard and Military Standard 105D	
4.1	Main principles of AQL systems for consumers	81
4.2	Relation between lot size and sample size	82
4.3	Relation between sample size and acceptance number	83
4.4	Switching rules	88
4.5	Double and multiple sampling plans	96
4.6	Discussion	98
5	The Dodge–Romig LTPD System and Its Generalizations	
5.1	Single sampling LTPD plans minimizing ATI	100
5.2	Generalization of the cost function	108
5.3	Decreasing consumer's risk	109
5.4	Single sampling IQL plans minimizing average costs	111
5.5	Double sampling LTPD plans minimizing ATI	113
6	The Dodge–Romig AOQL System	
6.1	Sampling plans with specified AOQL	116
6.2	The Dodge–Romig system of AOQL plans	120
7	Bayesian Sampling Plans	
7.1	Prior and posterior distributions	125
7.2	The beta-binomial and the gamma-Poisson distributions	128
7.3	Average cost and regret functions	138
7.4	Bayesian single sampling plans	144
7.5	Bayesian multiple and sequential sampling plans	152
8	Restricted Bayesian Sampling Plans	
8.1	Bayesian IQL sampling plans	153
8.2	Bayesian LTPD sampling plans	163
8.3	Bayesian AOQL sampling plans	169
8.4	Asymptotic theory	174
8.5	Concluding remarks	177
Part 2: Statistical Theory and Proofs		
9	Operating Characteristics for Single Sampling Plans	
9.1	The four OC functions	181
9.2	The three waiting time distributions	184

9.3	The beta distribution and some relations between distributions	187
9.4	The OC distribution	190
9.5	The binomial OC	191
9.6	Tables of the binomial OC	192
9.7	Approximations to the binomial OC	193
9.8	The Poisson OC	207
9.9	The hypergeometric OC	210
9.10	Comparison of the three OC functions	214
9.11	Sampling plans based on the OC function	217
9.12	Some asymptotic expansions of distribution functions	223
9.13	Problems and exercises	225
10	Double Sampling Plans for the Normal Distribution	
10.1	Introduction	235
10.2	The OC function and its derivatives	236
10.3	Incomplete normal moments	239
10.4	Approximations to the OC	240
10.5	OC equivalence and ASN efficiency	243
10.6	Optimum double sampling plans of given strength	244
10.7	Optimum double sampling plans of given strength for $n_1 = n_2$	248
10.8	Other definitions of OC equivalence and ASN efficiency	249
10.9	Problems and exercises	250
11	Operating Characteristics for Multiple and Sequential Sampling Plans	
11.1	The operating characteristic for double sampling plans	253
11.2	Approximations to the double sampling OC	254
11.3	The operating characteristic for multiple sampling plans	258
11.4	The operating characteristic for sequential sampling plans	262
11.5	Sequential sampling plans with specified guarantee of outgoing quality	268
11.6	Problems and exercises	269
12	The ASN Function and Efficiency	
12.1	The ASN for curtailed inspection in single sampling	273
12.2	The ASN for double sampling	276
12.3	The ASN for multiple sampling	277
12.4	The ASN for sequential sampling	278
12.5	Construction of multiple sampling plans of high efficiency	280
12.6	Problems and exercises	283
13	Switching Rules	
13.1	Definitions and notation	288

13.2	Results for tightened inspection	289
13.3	Results for normal inspection	290
13.4	The probability of tightened inspection and the composite operating characteristic	291
13.5	The probability of discontinuation of inspection	293
13.6	The conditional composite operating characteristic	295
13.7	Discussion	297
13.8	Problems and exercises	298
14	The Dodge–Romig LTPD and AOQL Systems	
14.1	The LTPD system and its generalizations	299
14.2	The AOQL system and its generalizations	305
14.3	The effect of inspection error	311
14.4	Problems and exercises	312
15	The Mixed Binomial Distribution	
15.1	The mixed hypergeometric distribution	315
15.2	Reproducible distributions	318
15.3	The mixed binomial distribution	319
15.4	The posterior distribution of p	324
15.5	The producer's and the consumer's risk and the distribution of accepted product	326
15.6	Relations between acceptance number and sample size	329
15.7	Sampling plans based on the two risks	330
15.8	The mixed Poisson distribution	332
15.9	Remarks on prior distributions	335
15.10	Problems and exercises	335
16	Bayesian Sampling Plans	
16.1	The model for single sampling	342
16.2	The average decision loss per item	345
16.3	The minimum regret and the optimum sample size	349
16.4	Determination of the optimum plan	349
16.5	An algorithm for tabulating Bayesian single sampling plans	350
16.6	Asymptotic solution for continuous prior distributions	355
16.7	Asymptotic solution for the two-point prior distribution	359
16.8	Efficiency	361
16.9	Generalizations	365
16.10	The model for double sampling	374
16.11	Asymptotic results for double sampling	382
16.12	Some numerical results for double sampling	389
16.13	Asymptotic results for multiple sampling	392

CONTENTS	xiii
16.14 Sequential sampling	393
16.15 Problems and exercises	396
17 Restricted Bayesian Single Sampling Plans	
17.1 Bayesian IQL sampling plans	409
17.2 Bayesian LTPD sampling plans	411
17.3 Bayesian AOQL sampling plans	415
17.4 Problems and exercises	415
18 Some Related Topics	
18.1 Minimax regret sampling plans	417
18.2 Empirical Bayes methods	424
18.3 Relation between the producer's and the consumer's sampling plans	426
18.4 Sampling plans with three decisions	427
18.5 Three class attributes sampling plans	428
Part 3: Statistical Tables for Sampling Inspection by Attributes, by A. Hald and U. Møller	
Introduction	433
OC Fractiles and ASN Values	
Table 1. OC fractiles, $m_p(c)$, for single sampling plans	437
Table 2. Ratio of OC fractiles, $R = m_\beta(c)/m_{1-\alpha}(c)$ for $\beta = 2\alpha$	440
Table 3. The ASN/ n as function of the acceptance probability for single sampling plans (c, n) with curtailed inspection	441
Table 4. The consumer's risk in per cent for single sampling plans with producer's risk of 5 per cent.	442
Table 5. Single sampling plans with the consumer's risk equal to two times the producer's risk	443
Table 6. Double sampling plans with $n_1 = n_2$	445
Table 7. Three-stage sampling plans with $n_1 = n_2 = \dots = n_3$	449
Table 8. Seven-stage sampling plans with $n_1 = n_2 = \dots = n_7$	453
Table 9. SPRT for the mean occurrence rate of a Poisson process	457
Single Sampling LTPD Plans with Consumer's Risk of 10 per cent Minimizing Average Total Inspection	
Tables 10–11. $w_2 = 0; \rho = 0.05(0.05)0.50$	462
Tables 12–13. $w_2 = 0.01; \rho = 0.05(0.05)0.50$	464
Tables 14–15. $w_2 = 0.05; \rho = 0.20(0.05)0.50$	466
Tables 16–17. $w_2 = 0.10; \rho = 0.35(0.05)0.50$	468

Single Sampling AOQL Plans Minimizing Average Total Inspection

Tables 18–19. $w_L = 0$; $\rho = 0.10(0.10)0.90$	470
Tables 20–21. $w_L = 0.01$; $\rho = 0.10(0.10)0.90$	472
Tables 22–23. $w_L = 0.05$; $\rho = 0.20(0.10)0.90$	474
Tables 24–25. $w_L = 0.10$; $\rho = 0.40(0.10)0.90$	476

Single Sampling IQL Plans Minimizing Average Total Costs

Tables 26–27. $w_r = 0$; $\rho = 0.20(0.05)0.50(0.10)0.80$	478
Tables 28–29. $w_r = 0.01$; $\rho = 0.20(0.05)0.50(0.10)0.80$	480
Tables 30–31. $w_r = 0.05$; $\rho = 0.20(0.05)0.50(0.10)0.80$	482
Tables 32–33. $w_r = 0.10$; $\rho = 0.35(0.05)0.50(0.10)0.80$	484

Single Sampling Plans Minimizing Average Total Costs

Table 34. $w_r = 0.05$; $\rho = 0.20(0.10)0.60$	486
Table 35. $w_r = 0.10$; $\rho = 0.40(0.10)0.70$	487
Table 36. Values of k_1 in the relation $m = k_1\sqrt{M} + k_2$	488
Table 37. Values of d_{1r} for the gamma prior distribution	490
Table 38. The rejectable part of the gamma prior distribution	492
