

Contents

<i>1</i>	<i>The Finite Element Method</i>	1
1.1	Fundamental Concept of the Finite Element Method	2
1.2	Advantages and Disadvantages	7
1.3	Scope	8
<i>2</i>	<i>Discretization of the Domain</i>	10
2.1	Types of Elements	11
2.2	The Division of the Domain into Elements	14
2.3	Labeling of the Nodes	18
2.4	Summary	19
<i>3</i>	<i>Linear Interpolation Polynomials</i>	23
3.1	One-Dimensional Simplex Element	24
3.2	Two-Dimensional Simplex Element	28
3.3	Three-Dimensional Simplex Element	33
3.4	Interpolation for Vector Quantities	37
3.5	Local Coordinate Systems	39
3.6	Properties of the Interpolation Polynomial	46

4	<i>Interpolating Polynomials for a Discretized Region</i>	54
4.1	Scalar Quantities	55
4.2	Vector Quantities	58
4.3	Summary	60
5	<i>A Finite Element Formulation for Some Boundary Value Problems</i>	63
5.1	A Simple Example: Heat Conduction in a Rod	64
5.2	The Example Problem Reconsidered	69
5.3	Finite Element Equations: Field Problems	71
5.4	Finite Element Equations: Theory of Elasticity	77
6	<i>Torsion of Noncircular Sections</i>	87
6.1	General Theory, Torsion of Noncircular Sections	88
6.2	Assemblage of the Element Matrices	90
6.3	Conventional Element Resultants	96
6.4	Consistent Element Resultants	100
7	<i>Finite Element Methodology: Computer Implementation</i>	105
7.1	Direct Construction of the Global Stiffness Matrix	105
7.2	The System of Linear Equations	109
7.3	General Computer Flow Diagram	116
7.4	Computer Implementation of the Torsion Problem	122
8	<i>Heat Transfer by Conduction and Convection</i>	138
8.1	Heat Transfer Equations	139
8.2	One-Dimensional Heat Transfer	141
8.3	Two-Dimensional Heat Transfer	148
8.4	Three-Dimensional Heat Transfer	155
8.5	Coordinate Transformations	157

8.6	Point Sources	157
8.7	Computer Implementation	162

9 Fluid Mechanics: Irrotational Flow 174

9.1	Two-Dimensional Groundwater Flow	175
9.2	Computer Implementation of Groundwater Problems	176
9.3	Irrotational Flow of an Ideal Fluid	182
9.4	Summary	184

10 Radial and Axisymmetric Field Problems 191

10.1	Two-Dimensional Symmetric Field Problems	192
10.2	Axisymmetric Field Problems	199
10.3	Computer Implementation	208

11 Time Dependent Field Problems 212

11.1	The Element Equations	212
11.2	The Element Capacitance Matrix	215
11.3	Finite Difference Solution in the Time Domain	218
11.4	Numerical Stability and Oscillations	221
11.5	Computer Implementation	222

12 Solid Mechanics: Elasticity 224

12.1	One-Dimensional Elasticity	225
12.2	Two-Dimensional Elasticity	232
12.3	Three-Dimensional Elasticity	240
12.4	Axisymmetric Elasticity	243
12.5	Computer Implementation	248

13 Higher-Order Elements: The One-Dimensional Element 257

13.1	The Quadratic and Cubic Elements	258
13.2	Application of the Quadratic Element	263

13.3	Natural Coordinate System. Coordinate Equations. Jacobian Matrix	269
13.4	Numerical Integration to Determine the Element Matrices	274
13.5	Subparametric, Isoparametric, and Superparametric Elements	280

14 Higher-Order Triangular and Tetrahedral Elements 287

14.1	Shape Functions for Higher-Order Elements	289
14.2	Calculation of the Derivatives of the Shape Functions	293
14.3	Evaluation of the Element Matrices	297
14.4	Tetrahedral Elements	303

15 The Quadrilateral Elements 309

15.1	The Linear Quadrilateral Element	309
15.2	Quadratic and Cubic Quadrilateral Elements	314
15.3	Evaluation of the Shape Function Derivatives	321
15.4	Evaluation of the Element Equations	325
15.5	Rectangular Prisms	329

16 Higher-Order Elements: Computer Implementation 334

16.1	Computer Implementation	334
16.2	Application Examples	337
16.3	Curved Boundaries	342

17 Formulation of the Element Equations Using Galerkin's Method 345

17.1	Galerkin's Method	346
17.2	Beam Deflections	347

17.3	Two-Dimensional Field Equation	352
17.4	Initial Value Problems	355
17.5	A System of First-Order Differential Equations	360
17.6	Summary	362

18 Computer Programs for Finite Element Instruction **365**

18.1	GRID	367
18.2	Band Matrix Subroutines	377
18.3	Notation	379
18.4	Torsion Program	381
18.5	CONSTR	382
18.6	FLDMCH	387
18.7	TDHEAT	387
18.8	STRESS	391

19 Concluding Remarks **400**

APPENDIX A Some Aspects of the Calculus of Variations **402**

APPENDIX B Differentiation of Matrix Equations **406**

Answers to Selected Problems **409**
Index **417**
