<b>1.</b>	<b>Simple linear regression</b>	<b>1</b>
<b>1.1</b>	Building a simple regression model, 4	
<b>1.2</b>	Least squares estimation, 7	
<b>1.3</b>	Estimating $\sigma^2$ , 11	
<b>1.4</b>	Properties of least squares estimates, 13	
<b>1.5</b>	Comparing models: the analysis of variance, 14	
<b>1.6</b>	The coefficient of determination, $R^2$ , 18	
<b>1.7</b>	Confidence intervals and tests, 19	
<b>1.8</b>	The residuals, 23	
	Problems, 26	
<b>2.</b>	<b>Multiple regression</b>	<b>31</b>
<b>2.1</b>	Adding a single independent variable to a simple regression model, 35	
<b>2.2</b>	Regression in matrix notation, 40	
<b>2.3</b>	The analysis of variance, 47	
<b>2.4</b>	Regression through the origin, 51	
	Problems, 52	
<b>3.</b>	<b>Drawing conclusions</b>	<b>59</b>
<b>3.1</b>	Interpreting parameter estimates, 59	
<b>3.2</b>	Sampling models, 62	

## x Contents

3.3	Independent variables measured with error, 67	
	Problems, 72	
4.	<b>Weighted least squares, testing for lack of fit, general <i>F</i>-tests, and confidence ellipsoids</b>	73
4.1	Generalized and weighted least squares, 73	
4.2	Testing for lack of fit, variance known, 81	
4.3	Testing for lack of fit, variance unknown, 83	
4.4	General <i>F</i> testing, 88	
4.5	Joint confidence regions, 89	
	Problems, 91	
5.	<b>Case analysis I: residuals and influence</b>	97
5.1	The residuals, 100	
5.2	The influence function, 106	
5.3	Outliers, 113	
	Problems, 117	
6.	<b>Case analysis II: symptoms and remedies</b>	119
6.1	Diagnostics: plotting residuals, 120	
6.2	Heterogeneity of variance, 122	
6.3	Nonlinearity, 126	
6.4	Distributional assumptions, 132	
6.5	Outliers and extreme cases, 135	
6.6	Choosing a transformation, 136	
	Problems, 144	
7.	<b>Model building I: defining new variables</b>	150
7.1	Polynomial regression, 150	
7.2	Dummy variables: dichotomous, 152	
7.3	Dummy variables: polytomous, 160	

7.4	Comparing regression lines, 162	
7.5	Scaling variables, 168	
7.6	Linear transformations and principal components, 169	
	Problems, 172	
<b>8.</b>	<b>Model building II: collinearity and variable selection</b>	<b>174</b>
8.1	Collinearity, 174	
8.2	Assumptions and notation, 183	
8.3	Selecting subsets on substantive grounds, 184	
8.4	Finding subsets, 185	
8.5	Computational methods I: stepwise methods, 190	
8.6	Computational methods II: all possible regressions, 196	
	Problems, 199	
<b>9.</b>	<b>Prediction</b>	<b>203</b>
9.1	Making predictions, 205	
9.2	Interval estimates, 213	
9.3	Interpolation versus extrapolation, 215	
	Problems, 218	
<b>10.</b>	<b>Incomplete data</b>	<b>221</b>
10.1	Missing at random, 221	
10.2	Handling incomplete data by filling in or deleting, 224	
10.3	Maximum likelihood estimates assuming normality, 227	
10.4	Missing observation correlation, 227	
10.5	General recommendations, 228	
<b>11.</b>	<b>Nonleast squares estimation</b>	<b>230</b>
11.1	Ridge regression, 232	
11.2	Generalized ridge regression, 234	

**xii Contents**

- 11.3** Regression on principal components, 235
- 11.4** James-Stein estimators, 235
- 11.5** Summary of shrunken estimators, 236
- 11.6** Robust regression, 237

<b>Appendix</b>	<b>239</b>
<b>1A.1</b> A formal development of the simple regression model, 239	
<b>1A.2</b> Means and variances of random variables, 240	
<b>1A.3</b> Least squares, 242	
<b>1A.4</b> Means and variances of least squares estimates, 242	
<b>1A.5</b> An example of round-off error, 244	
<b>2A.1</b> A brief introduction to matrices, 244	
<b>2A.2</b> Random vectors, 251	
<b>2A.3</b> Least squares, 253	
<b>5A.1</b> Relating regression equations, 255	
<b>8A.1</b> Derivation of $C_p$ , 256	
<b>9A.1</b> Finding a minimum covering ellipsoid, 257
