CHAPTER

1 MAIN CONCEPTS OF PROBABILITY THEORY 1
- 1.1 Probability Space, Random Variables, and Mathematical Expectation 1
- 1.2. Convergence Theorems 3
- 1.3. Independence 5
- 1.4. Conditional Expectation 6
- 1.5. Random Processes 10
- 1.6. Martingales 11
- 1.7. Wiener Process 13
- 1.8. Stochastic Integral 14
- 1.9. Ito's Formula 17
- 1.10. Stochastic Differential Equation 18
- 1.11. Minimum Variance Estimation 21

2 STOCHASTIC APPROXIMATION ALGORITHMS 26
- 2.1. Introduction 26
- 2.2. Analysis Via Techniques of Probability and Differential Equation Theory 30
- 2.3. Finding the Zero of a Regression Function: Correlated Noise Case 46
- 2.4. Finding the Extremum of Regression Function 66
- 2.5. Continuous-Time Stochastic Approximation 75
- 2.6. An Example 95

3 STRONG CONSISTENCY OF LEAST-SQUARES IDENTIFICATION 100
- 3.1. Introduction 100
- 3.2. Least-Squares Identification 101
- 3.3. Least-Squares under Correlated Noise 115
- 3.4. Continuous-Time Least-Squares Identification 130

4 IDENTIFICATION ALGORITHMS OF STOCHASTIC APPROXIMATION TYPE AND ADAPTIVE CONTROL 146
4.1. A Class of Identification Algorithms for Discrete Time 146
4.2. Modified Least-Squares Identification and Estimation for the Covariance Matrix 162
4.3. Continuous-Time Algorithms 174
4.4. Adaptive Control 186
4.5. Adaptive Tracking 211

5 RECURSIVE ESTIMATION AND CONTROL FOR DISCRETE-TIME SYSTEMS 215
5.1. Recursive (Kalman) Filtering, Interpolation, and Prediction for Conditionally Gaussian Systems 215
5.2. Stochastic Observability and Estimation without Knowledge of Initial Values (EWKIV) 236
5.3. Gauss–Markov Estimation 247
5.4. Recursive Formulas for Gauss–Markov Estimates 251
5.5. Control under Quadratic Index 254

6 LINEAR UNBIASED MINIMUM VARIANCE ESTIMATES FOR CONTINUOUS-TIME SYSTEMS 258
6.1. Introduction 258
6.2. The Kalman–Bucy Filter 265
6.3. Interpolation and Prediction 270
6.4. Filtering and Control with Linear Feedback 279
6.5. Stochastic Differential Games 288

7 SINGULAR PROBLEMS 291
7.1. Introduction 291
7.2. Suboptimal Filtering 295
7.3. Suboptimal Interpolation and Prediction 299
7.4. Unified Control Applicable to Possibly Singular Cases 302
7.5. Singular Controls of Special Cases 310
7.6. Unified Strategies 321

8 GAUSS–MARKOV ESTIMATION FOR CONTINUOUS-TIME SYSTEMS 336
8.1. Estimation without Knowledge of Initial Values 336
8.2. Stochastic Observability 353
8.3. Gauss–Markov Filtering, Interpolation, and Prediction 362
8.4. Stochastic Control with a Minimax Index of Quadratic Type 367
