

CONTENTS

Chapter I. Level of significance approach to multiple decision problems.

1.1.	Introduction	p. 1
1.2.	Simple one parameter decision problems	p. 1
1.3.	Scheffè's and Tukey's multiple comparison methods	p. 8
	A. Scheffè's method. An example	p. 8
	B. Scheffè's general method. Mathematical derivation	p. 13
	C. Tukey's multiple comparison test	p. 16
1.4.	Consecutive terminal decisions	p. 21
	A. Introduction	p. 21
	B. A two stage decision problem	p. 24
	C. Anderson's multiple test for degree of complexity of a model	p. 31
	D. Is the statistician "allowed" to look at the observations before formulating his a priori specification (model) ?	p. 44

Chapter II. General formal description of procedures of statistical inferences.

2.1.	An apology	p. 48
2.2.	Definition of the general statistical inference problem	p. 49
2.3.	An example: Hald's sampling inspection problem	p. 54

Chapter III. Loss function approach to multiple decision problems

3.1.	Risk unbiasedness	p. 60
3.2.	Introductory remarks on combination of statistical methods	p. 65
3.3.	The general theory of combination of tests ..	p. 67
3.4.	Multiple comparison procedures	p. 82
3.5.	Combined testing and estimation	p. 88
	A. Pure point estimation	p. 88
	B. Interval estimation	p. 95
	C. Estimation after a preliminary test of significance	p. 98

<u>References</u>	p. 102
