PREFACE	page ix
1 OUTLINES OF BASIC THEORY	1
1.1 Introduction	1
1.2 Standard maximum likelihood theory	1
1.2.1 Likelihood function	1
1.2.2 Consistency	3
1.2.3 Bias	5
1.2.4 Asymptotic normality	6
1.2.5 MLE as efficient estimators	7
1.2.6 Multiparameter estimation	9
1.2.7 Sufficiency	12
1.3 Small sample problems	12
1.3.1 Introduction	12
1.3.2 Illustrations	13
1.3.3	22
1.3.4 Summary of types of estimation problems	22
1.3.5 Asymptotic series	23
1.3.6 Asymptotic moments	25
1.3.7 Illustrations of asymptotic expansions in statistics	26
1.3.8 Asymptotics in general	30
References	31
2 SINGLE PARAMETER ESTIMATION	34
2.1 The problem	34
2.2 Methods available for moment evaluation	34
2.3 Expectation of products of linear forms	35
2.4 Order of magnitude of products of linear forms	36
2.5 Lagrange's expansion	36
2.6 Adjusted order of magnitude method	38
2.7 $c$ -variate Taylor approach	41
2.7.1	41
2.7.2 Derivatives of $\hat{\theta}$	41
2.7.3 Contributing terms in the sampling moments	42
2.7.4 Detailed consideration of the bias of $\hat{\theta}$	43
2.7.5	44
2.7.6 First four moments using logarithmic derivatives	44
2.7.7 Skewness and kurtosis	49
2.8 Moments using derivatives of the probability function	51
2.9 Illustrations	56
2.9.1 Probability function linear in $\theta$	56
2.9.2 Normal distribution with mean $\theta$ and unit variance	57
2.9.3 Normal distribution with zero mean and variance $\theta$	58
2.9.4 Poisson distribution with mean $\theta$	59
2.9.5 Fisher's "Nile" problem	60
References	62

3	BIAS AND COVARIANCE IN MULTIPARAMETER ESTIMATION	63
3.1	Introduction	63
3.2	Notation	63
3.3	Taylor expansion	64
3.4	Covariances	66
3.5	Bias	68
3.6	Special cases and the covariance	71
3.6.1	Case when the parameters are equal	71
3.6.2	Orthogonal parameters	72
3.6.3	Two parameters with $\hat{\theta}_2$ the sample mean	73
3.6.4	Estimators for the negative binomial distribution	74
3.7	Special cases and the bias	75
3.8	Adjusted order of magnitude method	77
	<i>References</i>	77
4	BIASES AND COVARIANCES FOR ESTIMATORS IN NON-REGULAR CASES	79
4.1	Introduction	79
4.2	Negative binomial distribution	80
	<i>References</i>	90
4.3	Neyman Type A distribution	91
	<i>References</i>	93
4.4	Pólya–Aeppli distribution	108
	<i>References</i>	110
4.5	Three-parameter Gamma distribution	110
	<i>References</i>	113
4.6	Two-parameter Hermite	113
	<i>References</i>	120
4.7	An exponential regression model	121
5	SPECIAL DENSITY ESTIMATION	126
5.1	Introduction	126
5.2	Logarithmic series distribution	126
5.2.1		126
5.2.2	Basic formulae	126
5.2.3	Central moments	127
5.2.4	Derivatives of $\hat{\theta}$	129
5.2.5	Comments on the moments	130
5.2.6	Skewness and kurtosis	136
5.2.7	Verification of the results	137
5.2.8	Conclusion and discussion	142
	<i>References</i>	143
5.3	Zero-truncated binomial distribution	143
5.3.1	Basic formulae	143
5.3.2	Taylor expansion	143
5.3.3	Tabulations	144
5.3.4	Comments on the tables	144
	<i>References</i>	149
5.4	Two-parameter Gamma distribution	149
5.4.1	Introduction	149
5.4.2	Basic formulae	150
5.4.3	Expansions for the ml estimators, $N$ large	150
5.4.4	Expansions for $\rho$ large	152
5.4.5	Validation of the moments	154

5.4.6	Concluding remarks	154
	<i>References</i>	156
6	SUMMARY AND CONCLUSIONS	158
6.1		158
6.2	The method of moments	158
6.3	Moment estimators related to the likelihood function	158
6.4	Mixed moment estimators	161
6.5	Estimators derived from measures of discrepancy	161
6.6	Moment estimators and numerical evaluation	162
6.7	Conclusions	163
	<i>References</i>	165
APPENDIX A	A factorial series (in $N$ ) for $E(\hat{\theta} - \theta)^g$	166
A.1	Introduction	166
A.2	Restrictions on the partitions	167
A.3	The general case	172
A.4	Factorial series for bias and variance up to $N^{-3}$	174
	<i>References</i>	176
APPENDIX B	Summation of asymptotic series	177
B.1	Introduction	177
B.2	Summation algorithms	177
B.3	Illustrations	180
B.4	Remarks	181
	<i>References</i>	181
