Preface	v
1. PROBABILISTIC MODELS	1
1. Probability	1
1.1. Introduction	1
1.2. Notation	2
1.3. Definition of Probability	5
1.4. Conditional Probability and Independence	7
1.5. Useful Notation in Counting	8
2. Probability Distribution Functions	10
2.1. Cumulative Probability Distribution Functions	10
2.2. Discrete Probability Density Functions	13
2.3. Continuous Probability Density Functions	15
2.4. Other Probability Distributions	17
2.5. Joint Probability Distributions	18
2.6. Independence and Conditional Densities	19
3. Familiar Univariate Probability Distribution Functions	24
3.1. Exponential Class	25

3.2.	Common Discrete Probability Density Functions	26
3.3.	Common Continuous Probability Density Functions	27
4.	Properties of Random Variables	32
4.1.	Functions of a Random Variable	32
4.2.	Expectation	36
4.3.	Moment-Generating Functions	39
4.4.	Location and Scale Parameters	41
4.5.	Reliability Concepts	41 ✕
4.6.	Other Properties of Random Variables	43
2.	BASIC STATISTICAL INFERENCE	45
1.	Introduction	45
2.	Order Statistics	49
3.	Descriptive Statistics	53
4.	Sufficiency and Completeness	56
5.	Sufficiency and Independence	59
6.	Sufficiency in the Presence of Nuisance Parameters	59
7.	Invariance	60
8.	Principles and Methods of Estimation	60
8.1.	Loss Functions	61
8.2.	Other Properties of Estimators	62
8.3.	Principle 1. Minimax Estimator	66
8.4.	Principle 2. Bayes Estimator	66
8.5.	Principle 3. Uniformly Minimum Variance Unbiased Estimator (UMVUE)	68
8.6.	Principle 4. Minimum Mean Squared Error Invariant Estimators	72
8.7.	Principle 5. Minimum Variance Linear Invariant Estimator (MVLUE)	75
8.8.	Principle 6. Minimum Risk Linear Invariant Estimator (BLIE)	77
8.9.	Principle 7. Least Squares Estimation	79
8.10.	Principle 8. Maximum Likelihood Estimation	83

9.	Principles of Hypothesis Testing and Interval Estimation	88
9.1.	Test of a Statistical Hypothesis	89
9.2.	Confidence Interval Estimation	96
3.	THE EXPONENTIAL DISTRIBUTION	98
1.	Properties of the Exponential Distribution	98
1.1.	Location and Scale Parameters	98
1.2.	Moments and Distributional Properties	99
1.3.	Constant Hazard Function. (No-Memory Property)	102
1.4.	Poisson Process	104
1.5.	Spare Parts	111
1.6.	Series Systems	113
1.7.	Parallel Systems	115
1.8.	Mixed Populations	117
2.	Statistical Inferences for One-Parameter Exponential Distribution, $X \sim \text{EXP}(\theta)$	121
2.1.	Point Estimation (Complete Samples)	122
2.2.	Tests of Hypotheses	124
2.3.	Confidence Interval Estimation	129
2.4.	Tolerance Limits	132
3.	One-Parameter Exponential Distribution. Type II Censored Sampling	136
3.1.	Choice of Censoring Fraction	138
4.	One-Parameter Exponential Distribution. Type I Censored Sampling	143
4.1.	Inferences Based on $r$	144
4.2.	Inferences based on $\hat{\theta}_1$	146
4.3.	Truncated Exponential Distribution	148
5.	Censored Sampling with Replacement	154
5.1.	Type I Censoring with Replacement	155
5.2.	Type II Censoring with Replacement	158

6.	Two-Parameter Exponential Distribution. Type II Censored Sampling (without replacement)	162
6.1.	Inferences on $\theta$ , $\eta$ Unknown	163
6.2.	Inferences on $\eta$ , $\theta$ Unknown	165
6.3.	Tolerance Limits and Confidence Limits on Reliability	167
7.	Two-Parameter Exponential Distribution. Type II Censored Sampling (with replacement)	173
8.	Two-Parameter Exponential Distribution. Type I Censored Sampling (with replacement)	174
8.1.	Inferences on $\theta$ , $\eta$ Unknown	176
8.2.	Inferences on $\eta$ , $\theta$ Unknown	176
9.	Two-Parameter Exponential Distribution. Type I Censored Sampling (without replacement)	178
9.1.	Inferences on $\theta$ , $\eta$ Unknown	179
9.2.	Inferences on $\eta$ , $\theta$ Unknown	181
10.	Multiple Type II Censoring or Missing Observations	183
10.1.	Point Estimation	183
10.2.	Inference Procedures for $EXP(\theta)$ Based on a Single-Order Statistic	187
10.3.	Inference Procedures for $EXP(\theta, \eta)$	190
11.	k-Sample Procedures	192
11.1.	Two-Sample Results	193
11.2.	k-Sample Results	200
4.	THE WEIBULL DISTRIBUTION	205
1.	Maximum Likelihood Procedures: $X \sim WEI(\theta, \beta)$	209
1.1.	Calculation of MLEs	209
1.2.	Pivotal Quantity Properties of the MLEs	211
1.3.	Monte Carlo Simulation	212
1.4.	Asymptotic Properties	215
1.5.	Inferences on $\beta$ , $\theta$ Unknown	219

1.6.	Inferences on $\theta$ , $\beta$ Unknown	226
1.7.	Tolerance Limits and Inferences on Percentiles	227
1.8.	Point and Interval Estimation of Reliability	246
2.	Inferences Based on Simple Estimators	264
2.1.	Computation of the GLUEs	264
2.2.	Variances of the GLUEs	270
2.3.	Modified GLUEs to Minimize MSE	270
2.4.	Inferences on $\delta$ or $\beta$	273
2.5.	Inferences on $R$ , $x_{1-p}$ , and $\theta$	276
3.	Multiple Sample Problems	286
3.1.	Combined Sample Estimate of $\beta$	286
3.2.	Testing Equality of Shape Parameters	287
3.3.	Results for Scale Parameters	289
3.4.	Selecting the Better of Two Weibull Populations	296
3.5.	Prediction Intervals	297
4.	Three-Parameter Weibull Distribution	302
4.1.	Estimation	302
4.2.	Tests of Two-Parameter Exponentiality Against Three-Parameter Weibull Alternatives	305
4.3.	Test for Two-Parameter Weibull Versus Three-Parameter Weibull	307
5.	Analysis for the Weibull Process	309
5.1.	Introduction	309
5.2.	Distributional Results and Maximum Likelihood Estimation	310
5.3.	Inferences on $\beta$ and $\theta$	313
5.4.	$K$ Independent Weibull Processes	314
5.5.	Prediction Intervals	317
5.	THE GAMMA DISTRIBUTION	322
1.	Properties of the Gamma Distribution	323
2.	Point Estimation	324

2.1. Complete Samples, Maximum Likelihood Estimation	324
2.2. Censored Sampling	326
2.3. Three-Parameter Gamma Distribution	333
3. Asymptotic Results	334
4. Inferences on $\kappa$	337
4.1. Two-Parameter Gamma Distribution	337
4.2. Test of Two-Parameter Exponentiality Against a Three-Parameter Gamma Alternative	342
5. Inferences on $\theta$ , $\kappa$ Unknown	343
6. EXTREME-VALUE DISTRIBUTIONS	352
1. Distributional Results	352
2. Applications	361
7. THE LOGISTIC AND OTHER DISTRIBUTIONS	363
1. Logistic Distribution	363
1.1. Maximum Likelihood Estimation and Asymptotic Properties	364
1.2. Inferences on $\mu$ and $\sigma$	366
1.3. Tolerance Limits	368
1.4. Inferences on Reliability	377
1.5. Simple Estimators	379
2. Cauchy Distribution	386
3. Normal Distribution	391
3.1. Complete Samples	392
3.2. Censored Sampling	394
4. Polynomial HF Models	401
5. Generalized Gamma Distribution	408
8. GOODNESS-OF-FIT TESTS	412
1. Probability Plots and Least Squares Fitting	413
2. Chi-Square Goodness-of-Fit	414

3. Cramer-Von Mises Test for Completely Specified $H_0$	417
4. Likelihood-Ratio-Type Tests	420
4.1. Normal Versus Two-Parameter Exponential	421
4.2. Normal Versus Double Exponential	423
4.3. Normal Versus Cauchy	425
4.4. Weibull Versus Lognormal or Extreme Value Versus Normal	425
References	429
Appendix	439
Index	445
