CHAPTER	PAGE
1 FITTING A STRAIGHT LINE BY LEAST SQUARES	1
1.0 Introduction: The Need for Statistical Analysis	1
1.1 Linear Relationships between Two Variables	4
1.2 Linear Regression: Fitting a Straight Line	7
1.3 The Precision of the Estimated Regression	13
1.4 Examining the Regression Equation	17
1.5 Lack of Fit and Pure Error	26
1.6 The Correlation between X and Y	33
Exercises	35
2 THE MATRIX APPROACH TO LINEAR REGRESSION	44
2.0 Introduction	44
2.1 Fitting a Straight Line in Matrix Terms: The Estimates of β_0 and β_1	44
2.2 The Analysis of Variance in Matrix Terms	53
2.3 The Variances and Covariance of b_0 and b_1 from the Matrix Cal-	55
culation	55
2.4 The Variance of \hat{Y} Using the Matrix Development.	56
2.5 Summary of Matrix Approach to Fitting a Straight Line	56
2.6 The General Regression Situation	58
2.7 The “Extra Sum of Squares” Principle	67
2.8 Orthogonal Columns in the X-Matrix	69
2.9 Partial F -Tests and Sequential F -Tests	71
2.10 Testing a General Linear Hypothesis in Regression Situations	72
2.11 Weighted Least Squares	77
2.12 Bias in Regression Estimates	81
3 THE EXAMINATION OF RESIDUALS	86
3.0 Introduction	86
3.1 Overall Plot	87
3.2 Time Sequence Plot	88
3.3 Plot Against \hat{Y}_i	90
3.4 Plot Against the Independent Variables $X_{ji}, i = 1, 2, \dots, n$	91
3.5 Other Residual Plots	91
3.6 Statistics for Examination of Residuals	92
3.7 Correlations among the Residuals	93

3.8	Outliers	94
3.9	Examining Runs in the Time Sequence Plot of Residuals	95
	Exercises	100
4	TWO INDEPENDENT VARIABLES	104
4.0	Introduction	104
4.1	Multiple Regression with Two Independent Variables as a Sequence of Straight-Line Regressions	107
4.2	Examining the Regression Equation	115
	Exercises	124
5	MORE COMPLICATED MODELS	128
5.0	Introduction	128
5.1	Polynomial Models of Various Orders in the X_j	129
5.2	Models Involving Transformations Other Than Integer Powers	131
5.3	The Use of "Dummy" Variables in Multiple Regression	134
5.4	Preparing the Input Data Matrix for General Regression Problems	142
5.5	Orthogonal Polynomials	150
5.6	Transforming X Matrices to Obtain Orthogonal Columns	156
	Exercises	159
6	SELECTING THE "BEST" REGRESSION EQUATION	163
6.0	Introduction	163
6.1	All Possible Regressions	164
6.2	The Backward Elimination Procedure	167
6.3	The Forward Selection Procedure	169
6.4	The Stepwise Regression Procedure	171
6.5	Two Variations on the Four Previous Methods	172
6.6	The Stagewise Regression Procedure	173
6.7	A Summary of the Least Squares Equations from Methods Described	177
6.8	Computational Method for Stepwise Regression	178
	Exercises	195
7	A SPECIFIC PROBLEM	217
7.0	Introduction	217
7.1	The Problem	217
7.2	Examination of the Data	217
7.3	Choosing the First Variable to Enter Regression	220
7.4	Construction of New Variables	222
7.5	The Addition of a Cross-Product Term to the Model	224
7.6	Enlarging the Model	225
	Exercises	227

8	MULTIPLE REGRESSION AND MATHEMATICAL MODEL BUILDING	234
	8.0 Introduction	234
	8.1 Planning the Model Building Process	236
	8.2 Development of the Mathematical Model	239
	8.3 Verification and Maintenance of the Mathematical Model	240
9	MULTIPLE REGRESSION APPLIED TO ANALYSIS OF VARIANCE	
	PROBLEMS	243
	9.0 Introduction	243
	9.1 The One-Way Classification	244
	9.2 Regression Treatment of the One-Way Classification Using the Original Model	245
	9.3 Regression Treatment of the One-Way Classification: Independent Normal Equations	251
	9.4 The Two-Way Classification with Equal Numbers of Observations in the Cells	253
	9.5 Regression Treatment of the Two-Way Classification with Equal Numbers of Observations in the Cells	254
	9.6 Example: The Two-Way Classification	258
	9.7 Comments	260
	Exercises	260
10	AN INTRODUCTION TO NONLINEAR ESTIMATION	263
	10.1 Introduction	263
	10.2 Least Squares in the Nonlinear Case	264
	10.3 Estimating the Parameters of a Nonlinear System	267
	10.4 An Example	275
	10.5 A Note on Reparameterization of the Model	284
	10.6 The Geometry of Linear Least Squares	285
	10.7 The Geometry of Nonlinear Least Squares	295
	Exercises	299
	Nonlinear Bibliography	301
	PERCENTAGE POINTS OF THE <i>t</i>-DISTRIBUTION	305
	PERCENTAGE POINTS OF THE <i>F</i>-DISTRIBUTION	306
	BIBLIOGRAPHY	309
	ANSWERS TO EXERCISES	317
	APPENDIX A	347
	APPENDIX B	365
	INDEX	403
