CHAPTER	PAGE
1	1
INTRODUCTION	
1.1 Advantages of the Sampling Method	1
*1.2 Some Uses of Sample Surveys	3
1.3 The Principal Steps in a Sample Survey	5
1.4 The Role of Sampling Theory	9
1.5 Probability Sampling	10
*1.6 Use of the Normal Distribution	11
1.7 Bias and Its Effects	12
*1.8 The Mean Square Error	15
<i>Exercises</i>	16
<i>References</i>	17
2	18
SIMPLE RANDOM SAMPLING	
2.1 Simple Random Sampling	18
2.2 Definitions and Notation	19
2.3 Properties of the Estimates	20
2.4 Variances of the Estimates	21
2.5 The Finite Population Correction	23
2.6 Estimation of the Standard Error from a Sample	24
2.7 Confidence Limits	26
*2.8 An Alternative Method of Proof	27
*2.9 Estimation of a Ratio	29
*2.10 Estimates of Means Over Subpopulations	33
*2.11 Estimates of Totals Over Subpopulations	34

Asterisk denotes sections that are new in this edition.

*2.12	Comparisons between Domain Means	37
2.13	Validity of the Normal Approximation	38
2.14	Effect of Non-normality on the Estimated Variance	43
	<i>Exercises</i>	44
	<i>References</i>	47
3	SAMPLING FOR PROPORTIONS AND PERCENTAGES	49
3.1	Qualitative Characteristics	49
3.2	Variances of the Sample Estimates	49
3.3	The Effect of P on the Standard Errors	52
3.4	The Binomial Distribution	54
3.5	The Hypergeometric Distribution	55
3.6	Confidence Limits	56
3.7	Classification into More than Two Classes	59
3.8	Confidence Limits When There Are More than Two Classes	60
3.9	The Conditional Distribution of p	61
*3.10	Proportions and Totals Over Subpopulations	62
*3.11	Comparisons between Different Domains	63
*3.12	Estimation of Proportions in Cluster Sampling	64
	<i>Exercises</i>	68
	<i>References</i>	70
4	THE ESTIMATION OF SAMPLE SIZE	71
4.1	A Hypothetical Example	71
4.2	Analysis of the Problem	72
4.3	The Specification of Precision	73
4.4	The Formula for n in Sampling for Proportions	74
4.5	The Formula for n with Continuous Data	75
*4.6	Advance Estimates of Population Variances	77
4.7	Sample Size with More than One Item	79
*4.8	Sample Size when Estimates Are Wanted for Subdivisions of the Population	81
4.9	Sample Size in Decision Problems	82
	<i>Exercises</i>	84
	<i>References</i>	86
5	STRATIFIED RANDOM SAMPLING	87
5.1	Description	87
5.2	Notation	88

5.3	Properties of the Estimates	89
5.4	The Estimated Variance and Confidence Limits	93
5.5	Optimum Allocation	95
5.6	Relative Precision of Stratified Random and Simple Random Sampling	98
*5.7	When Does Stratification Produce Large Gains in Precision?	100
5.8	Allocation Requiring More than 100 Per Cent Sampling	103
5.9	Estimation of Sample Size with Continuous Data	103
5.10	Stratified Sampling for Proportions	106
5.11	Gains in Precision in Stratified Sampling for Proportions	107
5.12	Estimation of Sample Size with Proportions	109
	<i>Exercises</i>	110
	<i>References</i>	113
5A	FURTHER ASPECTS OF STRATIFIED SAMPLING	114
5A.1	Effects of Deviations from the Optimum Allocation	114
5A.2	Effects of Errors in the Stratum Sizes	116
*5A.3	The Problem of Allocation with More than One Item	118
*5A.4	Other Methods with More than One Item	120
*5A.5	Two-Way Stratification with Small Samples	126
*5A.6	The Construction of Strata	128
*5A.7	Number of Strata	133
5A.8	Stratification After Selection of the Sample	135
5A.9	Quota Sampling	136
5A.10	Estimation from a Sample of the Gain Due to Stratification	137
5A.11	Estimation of Variance with One Unit per Stratum	141
*5A.12	Short-Cuts in the Computation of Standard Errors	142
*5A.13	Strata as Domains of Study	145
*5A.14	Estimating Totals and Means Over Subpopulations	146
	<i>Exercises</i>	149
	<i>References</i>	152
6	RATIO ESTIMATES	154
6.1	Methods of Estimation	154
6.2	The Ratio Estimate	155
6.3	Approximate Variance of the Ratio Estimate	157
*6.4	Accuracy of the Approximate Variance	159
*6.5	Bias of the Ratio Estimate	160
6.6	Estimation of the Variance from a Sample	163
6.7	Confidence Limits	164
6.8	Comparison of the Ratio Estimate with the Mean per Unit	165
6.9	Conditions under which the Ratio Estimate is Optimum	166

6.10	Ratio Estimates in Stratified Random Sampling	167
6.11	The Combined Ratio Estimate	169
6.12	Comparison of the Combined and Separate Estimates	170
*6.13	Short-Cut Computation of the Variance	173
6.14	Optimum Allocation with a Ratio Estimate	173
*6.15	Unbiased Ratio-Type Estimates	176
*6.16	Comparison of Two Ratios	181
*6.17	Multivariate Ratio Estimates	184
	<i>Exercises</i>	186
	<i>References</i>	188
7	REGRESSION ESTIMATES	189
7.1	The Linear Regression Estimate	189
*7.2	Regression Estimates with Preassigned b	190
7.3	Regression Estimates when b Is Computed from the Sample	193
*7.4	Accuracy of the Large-Sample Formula for $V(y_{lr})$	196
7.5	Further Notes on the Bias	198
7.6	Comparison with the Ratio Estimate and the Mean per Unit	199
7.7	Regression Estimates in Stratified Sampling	200
7.8	Regression Coefficients Estimated from the Sample	202
7.9	Comparison of the Two Types of Regression Estimate	203
	<i>Exercises</i>	204
	<i>References</i>	205
8	SYSTEMATIC SAMPLING	206
8.1	Description	206
8.2	Relation to Cluster Sampling	207
8.3	Variance of the Estimated Mean	208
8.4	Comparison of Systematic with Stratified Random Sampling	213
8.5	Populations in "Random" Order	214
8.6	Populations with Linear Trend	216
8.7	Populations with Periodic Variation	218
8.8	Autocorrelated Populations	219
8.9	Natural Populations	221
8.10	Estimation of the Variance from a Single Sample	224
8.11	Stratified Systematic Sampling	227
8.12	Systematic Sampling in Two Dimensions	228
8.13	Summary	230
	<i>Exercises</i>	230
	<i>References</i>	233

9	ONE-STAGE CLUSTER SAMPLING	234
	9.1 Reasons for Cluster Sampling	234
	9.2 A Simple Rule	235
	9.3 Comparisons of Precision Made from Survey Data	239
	9.4 Variance in Terms of Intracluster Correlation	242
	9.5 Variance Functions	244
	9.6 A Cost Function	245
	9.7 Cluster Sampling for Proportions	247
	*9.8 Cluster Units of Unequal Sizes	249
	9.9 Sampling with Probability Proportional to Size	251
	9.10 Theory for Selection with Arbitrary Probabilities	252
	9.11 The Optimum Measure of Size	255
	*9.12 Relative Precisions of the Techniques	256
	9.13 Extension to Stratified Sampling	259
	*9.14 Sampling with Unequal Probabilities without Replacement	260
	*9.15 Alternative Approaches	262
	*9.16 Some Comparisons for $n = 2$	264
	<i>Exercises</i>	266
	<i>References</i>	269
10	SUBSAMPLING WITH UNITS OF EQUAL SIZE	270
	10.1 Two-Stage Sampling	270
	*10.2 Two Useful Results	271
	10.3 Variance of the Estimated Mean in Two-Stage Sampling	275
	10.4 Estimation of the Variance	276
	10.5 The Estimation of Proportions	278
	10.6 Optimum Sampling and Subsampling Fractions	279
	*10.7 Estimation of m_{opt} from a Pilot Survey	283
	10.8 Three-Stage Sampling	285
	10.9 Stratified Sampling of the Units	288
	*10.10 Optimum Allocation with Stratified Sampling	288
	<i>Exercises</i>	290
	<i>References</i>	291
11	SUBSAMPLING WITH UNITS OF UNEQUAL SIZE	292
	11.1 Introduction	292
	11.2 Sampling Methods when $n = 1$	293
	11.3 Sampling with Probability Proportional to Estimated Size	297
	11.4 Summary of Methods for $n = 1$	299
	11.5 Sampling Methods when $n > 1$	300

*11.6	Units Selected with Equal Probabilities. "Ratio to Size" Estimate	300
*11.7	Units Selected with Equal Probabilities. Unbiased Estimate	304
*11.8	Units Selected with Probability Proportional to a Measure of Size. Unbiased Estimate	305
*11.9	Units Selected with Probability Proportional to Size. Unbiased Estimate	308
*11.10	Units Selected with Probability Proportional to a Measure of Size. Estimate: Ratio to Size	308
*11.11	Comparison of the Methods	309
11.12	Ratios to Another Variable	311
11.13	Variance of the Ratio with Equal Probabilities of Selection	311
11.14	Variance of the Ratio with <i>ppes</i> Selection	312
*11.15	Choice of Sampling and Subsampling Fractions. Equal Probabilities	313
11.16	Sampling and Subsampling Fractions for <i>ppes</i> Sampling	314
11.17	Stratified Sampling. Unbiased Estimates	318
11.18	Stratified Sampling. Ratio Estimates	320
*11.19	Selection with Unequal Probabilities without Replacement	321
11.20	Summary Comments	322
	<i>Exercises</i>	324
	<i>References</i>	326
12	DOUBLE SAMPLING	327
12.1	Description of the Technique	327
12.2	Double Sampling for Stratification	328
12.3	Optimum Allocation	330
12.4	Estimated Variance in Double Sampling for Stratification	332
12.5	Regression Estimates	334
12.6	Double Sampling with Regression versus Single Sampling	336
12.7	Estimated Variance in Double Sample for Regression	339
12.8	Ratio Estimates	339
12.9	Repeated Sampling of the Same Population	341
12.10	Sampling on Two Occasions	342
12.11	Sampling on More than Two Occasions	345
*12.12	Simplifications and Further Developments	347
	<i>Exercises</i>	352
	<i>References</i>	353
13	SOURCES OF ERROR IN SURVEYS	355
13.1	Introduction	355
13.2	Effects of Nonresponse	355

*13.3	Types of Nonresponse	359
*13.4	Call-Backs	361
*13.5	A Mathematical Model of the Effects of Call-Backs	363
13.6	Optimum Sampling Fraction among the Nonrespondents	367
*13.7	Adjustments for Bias without Call-Backs	371
13.8	A Mathematical Model for Errors of Measurement	374
13.9	Effects of Constant Bias	376
13.10	Effects of Errors that Are Uncorrelated within the Sample	377
13.11	Effects of Intrasample Correlation between Errors	380
13.12	Summary of the Effects of Errors of Measurement	381
*13.13	The Study of Errors of Measurement	381
13.14	Interpenetrating Subsamples	383
*13.15	Extension to More Complex Plans	385
*13.16	Controlled Experiments Imbedded in Surveys	387
13.17	Summary	389
