CONTENTS

Preface xi
Acknowledgments xiii

Chapter 1 **INTRODUCTION**
The Forest before the Trees

1.0 Why Statistics? 1
1.1 Why Multivariate Statistics? 5
1.2 A Heuristic Survey of Statistical Techniques 7
1.2.1 Student's *t*-Test 10
1.2.2 One-Way Analysis of Variance 10
1.2.3 Hotelling's T^2 13
1.2.4 One-Way Multivariate Analysis of Variance 14
1.2.5 Higher-Order Analysis of Variance 14
1.2.6 Higher-Order Manova 15
1.2.7 Pearson *r* and Bivariate Regression 16
1.2.8 Multiple Correlation and Regression 19
1.2.9 Canonical Correlation 20
1.2.10 Analysis of Covariance 20
1.2.11 Principal Component Analysis 23
1.2.12 Factor Analysis 25
1.3 Learning to Use Multivariate Statistics 27

Chapter 2 **MULTIPLE REGRESSION**
Predicting One Variable from Many

2.1 The Model 32
2.2 Choosing Weights 35
2.2.1 Least Squares Criterion 35
2.2.2 Maximum Correlation Criterion 40

2.2.3 The Utility of Matrix Algebra 42
2.2.4 Independence of Irrelevant Parameters 44
2.3 Relating the Sample Equation to the Population Equation 45
2.4 Computer Programs for Multiple Regression 52
2.5 Some General Properties of Covariance Matrices 52
2.6 Measuring the Importance of the Contribution of a Single Variable 54
Demonstration Problem 56
Some Real Data and a Quiz Thereon 61
Real Data Quiz I 61

Chapter 3 **HOTELLING'S T^2**
Tests on One or Two Mean Vectors

3.1 Single-Sample t and T^2 67
3.2 Linearly Related Outcome Variables 76
3.3 Two-Sample t and T^2 77
3.4 Profile Analysis 80
3.5 Discriminant Analysis 84
3.6 Assumptions Underlying T^2 85
3.6.1 The Assumption of Equal Covariance Matrices 85
3.6.2 Known Covariance Matrix 86
3.6.3 The Assumption of Multivariate Normality 87
3.7 Single-Symbol Expressions for Simple Cases 87
Demonstration Problem 88

Chapter 4 **MULTIVARIATE ANALYSIS OF VARIANCE**
Differences among Several Groups on Several Measures

4.1 One-Way (Univariate) Analysis of Variance 93
4.1.1 The Overall Test 93
4.1.2 Specific Comparisons 96
4.2 One-Way Multivariate Analysis of Variance 101
4.3 Multiple Profile Analysis 106
4.4 Multiple Discriminant Analysis 108
4.5 Greatest Characteristic Roots versus Wilks's Lambda in Manova 109
4.6 Practical Computation of Characteristic Roots 113
4.7 Simple Cases of Manova 115
4.8 Higher-Order Manova 118
4.9 Within-Subject Univariate Anova versus Manova 125
Demonstration Problem 128

Chapter 5 **CANONICAL CORRELATION**
Relationships between Two Sets of Variables

5.1 Derivation of Formulas for Computing Canonical *R*s 132
5.1.1 Heuristic Justification of Canonical Formulas 134
5.1.2 Simple Cases of Canonical Correlations 136
5.1.3 Example of a Canonical Analysis 137
5.2 Relationships to Other Statistical Techniques 140
5.2.1 Proof of Relationship between Canonical Analysis and Manova 141
5.3 Likelihood-Ratio Tests of Relationships between Sets of Variables 143
5.4 Generalization and Specialization of Canonical Analysis 145
Demonstration Problem and Some Real Data Employing Canonical Correlation 146

Chapter 6 **PRINCIPAL COMPONENT ANALYSIS**
Relationships within a Single Set of Variables

6.1 Definition of Principal Components 156
6.2 Interpretation of Principal Components 158
6.3 Uses of Principal Components 163
6.3.1 Uncorrelated Contributions 163
6.3.2 Computational Convenience 164
6.3.3 Principal Component Analysis as a Means of Handling Linear Dependence 165
6.3.4 Single-Symbol Formulas for Simple Cases of PCA 168
6.3.5 Examples of PCA 170
6.4 Significance Tests for Principal Components 174
6.4.1 Sampling Properties of Covariance-Based PCs 175
6.4.2 Sampling Properties of Correlation-Based PCs 176
6.5 Rotation of Principal Components 177
6.5.1 Basic Formulas for Rotation 179
6.5.2 Objective Criteria for Rotation 181
6.5.3 Examples of Rotated PCs 187
6.5.4 Individual Scores on Rotated PCs 191
Demonstration Problem 194

Chapter 7 **FACTOR ANALYSIS**
The Search for Structure

7.1 The Model 205
7.2 Communalities 208
7.2.1 Theoretical Solution 208
7.2.2 Empirical Approximations 210
7.2.3 Iterative Procedure 211

7.3 Factor Analysis Procedures Requiring Communality Estimates 211
7.3.1 Principal Factor Analysis 211
7.3.2 Triangular Decomposition 212
7.3.3 Centroid Analysis 214
7.4 Methods Requiring Estimate of Number of Factors 215
7.5 Other Approaches to Factor Analysis 217
7.6 Factor Loadings versus Factor Scores 218
7.7 Relative Merits of Principal Component Analysis versus Factor Analysis 220

Chapter 8 **THE FOREST REVISITED**

8.1 Scales of Measurement and Multivariate Statistics 225
8.2 Effects of Violations of Distributional Assumptions in Multivariate Analysis 231
8.3 Nonlinear Relationships in Multivariate Statistics 233
8.4 The Multivariate General Linear Hypothesis 236
8.5 Where to Go from Here 239

Digression 1 **FINDING MAXIMA AND MINIMA OF POLYNOMIALS**

D1.1 Derivatives and Slopes 241
D1.2 Optimization Subject to Constraints 243

Digression 2 **MATRIX ALGEBRA**

D2.1 Basic Notation 245
D2.2 Linear Combinations of Matrices 246
D2.3 Multiplication of Matrices 247
D2.4 Permissible Manipulations 249
D2.5 Computation of Determinants 250
D2.6 Properties of Determinants 251
D2.7 Inverses of Matrices 253
D2.8 Some Handy Formulas for Inverses in Simple Cases 254
D2.9 Rank 255
D2.10 Matrix Calculus 255
D2.11 Partitioned Matrices 256
D2.12 Characteristic Roots and Vectors 258

Digression 3 **SOLUTION OF CUBIC EQUATIONS** 261

Digression 4 **USE OF CANNED COMPUTER PROGRAMS**

D4.1 Computer Logic and Organization 267
D4.2 Three Nationally Distributed Packages of Statistical Programs 271
D4.3 Handy Hints and Warnings on the Use of Canned Computer Programs 274
D4.4 Specific Programs Useful in Multivariate Statistical Analyses 277
D4.4.1 Basic Statistics 277
D4.4.2 Matrix Operations 281
D4.4.3 Multiple Regression 282
D4.4.4 T^2 and Manova 287
D4.4.5 Canonical Correlation 289
D4.4.6 Factor Analysis 290
D4.4.7 Multivariate General Linear Hypothesis 290

Appendix A **STATISTICAL TABLES**

A1 Normal Distribution 294
A2 *t*-Distribution 295
A3 Chi-Square Distribution 296
A4 *F*-Distribution 298
A5 Greatest Characteristic Root Distribution 300
A6 Natural Logarithms 310

Appendix B **FORTRAN IV PROGRAM LISTINGS**

B1 RJH004 (Matrix Inversion) 312
B2 HEINV (Characteristic Roots and Vectors of $\mathbf{E}^{-1}\mathbf{H}$) 313
B3 GCRCLC (Percentiles of the Greatest Characteristic Root Distribution) 314
B4 TINV (Critical Values of Student's *t*-Distribution) 316
