

CONTENTS

Foreword	11
I. Introduction	17
§ 1. Superpositions of density functions and discrete distributions. The problem of the decomposition of superpositions	17
Supplements and problems to Ch. I, § 1	20
II. Some mathematical tools	22
§ 1. Unimodal density functions	23
Supplements and problems to Ch. II, § 1	27
§ 2. Unimodal discrete distributions	37
Supplements and problems to Ch. II, § 2	37
§ 3. Identification problems connected with mixtures of density functions and discrete distributions	49
Supplements and problems to Ch. II, § 3	49
§ 4. The characterization of the shape of the graph of a density function	51
Supplements and problems to Ch. II, § 4	63
§ 5. The characterization of the shape of the graph of a discrete distribution	67
Supplements and problems to Ch. II, § 5	77
§ 6. Unimodal transforms of increased narrowness of density functions	78
§ 7. Unimodal transforms of increased narrowness of discrete distributions	78
§ 8. Some special theorems concerning density functions and discrete distributions	79
Supplements and problems to Ch. II, § 8	89
III. Decomposition of superpositions, I. Decomposition of superpositions of density functions	90
§ 1. First type of superposition. The \mathcal{A} -method	90
1. First particular case of the \mathcal{A} -method: The method of formant changing	93
1.1. The simple diminishing of the formant	94
1.1.1. A particular case	97
1.1.1.1. Decomposition of a superposition of normal density functions	103
2. Second particular case of the \mathcal{A} -method	113
2.1. The first type of test function	113
2.2. The second type of test function	116

3. Decomposition of superpositions of the first type by means of the transformation of the superposition	123
Supplements and problems to Ch. III, § 1	126
§ 2. Second type of superposition. The \mathcal{B} -method	143
1. A particular case of the \mathcal{B} -method	149
1.1. Decomposition of a superposition of exponential density functions	153
Supplements and problems to Ch. III, § 2	155
§ 3. <i>Ad hoc</i> methods	166
Supplements and problems to Ch. III, § 3	185
IV. Decomposition of superpositions, II. Decomposition of superpositions of discrete distributions	190
§ 1. First type of superposition. The \mathcal{C} -method	190
1. First particular case of the \mathcal{C} -method: The method of formant changing	192
1.1. The simple diminishing of the formant	193
1.1.1. A particular case	199
2. Second particular case of the \mathcal{C} -method	201
3. Decomposition of superpositions of the first type by means of the transformation of the superposition	205
Supplements and problems to Ch. IV, § 1	207
§ 2. Second type of superposition. The \mathcal{D} -method	215
1. A particular case of the \mathcal{D} -method	219
Supplements and problems to Ch. IV, § 2	220
§ 3. <i>Ad hoc</i> methods	221
Supplements and problems to Ch. IV, § 3	224
V. Appendix. Numerical methods that can be applied in carrying out decomposition methods	226
§ 1. Solution of operator equations of the 1st kind	226
1. Correct and incorrect problems. Early methods of treating incorrect problems	226
2. The method of D. L. Phillips	229
3. The method of V. K. Ivanov	231
4. The regularization method of A. N. Tihonov	232
Supplements and problems to Ch. V, § 1	237
§ 2. A special method for the numerical solution of certain integral equations of convolution type	243
Supplements and problems to Ch. V, § 2	244

§ 3. Another method for the numerical solution of certain integral equations of convolution type	246
Supplements and problems to Ch. V, § 3	256
§ 4. Numerical computation of convolution transforms	257
1. A method based on the trapezoidal formula	258
2. A method based on approximation by interpolatory polynomials	259
Supplements and problems to Ch. V, § 4	261
