

Preface		ix
Chapter 1	FORMULATION OF THE WEIGHING PROBLEM.....	1
	1.1. Introduction	1
	1.2. Origin of the Problem	1
	1.3. Statistical Model Characterizing the Problem	5
	1.4. Two Types of Problems	6
	1.5. Hotelling's Lemma	6
	1.6. Illustrations	7
	1.7. Hotelling's Call for Further Mathematical Research	11
	1.8. Efficiency of a Weighing Design.....	12
Chapter 2	CHEMICAL BALANCE PROBLEM	17
	2.1. Chemical Balance Designs and Hadamard Matrices	17
	2.2. Chemical Balance Weighing Designs When $N \neq p$	19
	2.3. Chemical Balance Designs for Values of $N = p$ When H_N Does Not Exist	22
	2.4. Complexities Arising from Different Definitions of Efficiency.	27

Chapter 3	SPRING BALANCE PROBLEM	33
	3.1. Two Theorems of Mood Giving the Best Spring Balance Designs	33
	3.2. Spring Balance Weighing Designs and Balanced Incomplete Blocks	34
	3.3. Series of Designs Denoted L_N by Mood	37
	3.4. Connection of L_N with a Symmetrical BIBD of a Special Kind	38
	3.5. Use of BIBD's as Weighing Designs...	39
	3.6. Efficient Spring Balance Weighing Designs for Small Values of $N = p...$	40
	3.7. Spring Balance Designs when Different Rows of L_N Are Added to $L_N...$	42
	3.8. Construction of Weighing Designs by the Inclusion of Additional Rows to a Design Matrix	47
	3.9. Use of Partially Balanced Incomplete Block Designs as Weighing Designs	48
Chapter 4	MISCELLANEOUS ISSUES CONCERNING THE WEIGHING PROBLEM	51
	4.1. Determination of Total Weight	51
	4.2. Factorial Approach to the Weighing Problem	54
	4.3. How Balanced Incomplete Block Designs Can Furnish Orthogonal Estimates in Weighing Designs	61
	4.4. Yates' Original Example: The Best Design for the Problem Under Consideration	64
	4.5. Weighing Designs Under Autocorrelation of Errors	67
	4.6. Singular Weighing Designs	70
	4.7. Fractional Weighing Designs	74
	4.8. Biased Estimation in Weighing Designs	78
	4.9. Repeated Spring Balance Weighing Designs	79
	4.10. The Construction of Optimal Chemical Balance Designs	80
	4.11. Construction of D-Optimal (Unrestricted) Designs	82
	4.12. A New Model for the Weighing Problem and a Comment on the Construction of Balances	83

4.13.	Use of Weighing Designs in the Measurement of Physical Constants.....	85
4.14.	Use of Weighing Designs in Other Sciences.....	87
4.15.	Concluding Remarks: The Future of the Weighing Problem	88
Exercises	91
Appendix A	The General Linear Hypothesis Model and the Method of Least Squares	99
Appendix B	Weighing Designs Illustrated	109
Appendix C	A List of Weighing Designs	125
References	133
Index	139
