<i>Preface</i>		xvii

Chapter 1. INTRODUCTION

1.1	Purpose of the study	1
1.2	History of the lognormal distribution	2
1.3	Review of problems considered	5
1.4	Notation	6

Chapter 2. GENERAL PROPERTIES OF
LOGNORMAL DISTRIBUTIONS

2.1	Introduction	7
2.2	The two-parameter distribution: definition	7
2.3	Moments and other characteristics	8
2.4	Reproductive properties	9
2.5	Moment distributions: Gini's coefficient of mean difference	12
2.6	Central limit theorems	13
2.7	The three-parameter distribution: definition	14
2.8	Moments, other characteristics, and moment distributions	15
2.9	Negatively skew distributions	16
2.10	A four-parameter distribution	17
2.11	Generalizations by series representations	17

Chapter 3. THE GENESIS OF LOGNORMAL DISTRIBUTIONS

3.1	Reasons for considering the genesis of a distribution	20
3.2	Kapteyn's system of translation and Pearson's criticism	20
3.3	The theory of proportionate effect	22
3.4	Kapteyn's analogue machine	23
3.5	Extensions and criticisms of the theory of genesis	24
3.6	The theory of breakage	26

Chapter 4. ARTIFICIAL LOGNORMAL SAMPLES AND TESTS OF LOGNORMALITY

4.1	The construction of artificial samples from a lognormal population	<i>page</i> 28
4.2	The purpose of constructing artificial samples	29
4.3	The 65 samples constructed	29
4.4	Testing for lognormality: introductory remarks	30
4.5	Logarithmic probability paper	31
4.6	Tests of lognormality: Geary and Pearson tests; χ^2	34
4.7	Tests applied to the 65 samples	35

Chapter 5. ESTIMATION PROBLEMS: I

5.1	General remarks on estimation	37
5.2	Estimation of μ and σ^2 in a two-parameter distribution	38
	5.21. The method of maximum likelihood, <i>p.</i> 39. 5.22. The method of moments, <i>p.</i> 39. 5.23. The method of quantiles, <i>p.</i> 40. 5.24. The graphical method, <i>p.</i> 42	
5.3	Experimental results (I): the methods of §5.2 applied to the 65 samples	43
5.4	Estimation of α and β^2 in a two-parameter distribution	44
	5.41. The method of maximum likelihood, <i>p.</i> 45. 5.42. The method of moments, <i>p.</i> 46. 5.43. The method of quantiles, <i>p.</i> 46. 5.44. The graphical method, <i>p.</i> 48	
5.5	Experimental results (II): the methods of §5.4 applied to the 65 samples	48
5.6	Confidence intervals	50
	5.61. Confidence intervals for μ and σ^2 , <i>p.</i> 50. 5.62. Confidence intervals for α and β^2 , <i>p.</i> 50	
5.7	The grouping of observations	51
	5.7. Grouping for μ and σ^2 , <i>p.</i> 51. 5.72. Grouping for α and β^2 , <i>p.</i> 52	
5.8	Some special devices of estimation	52
5.9	Summary of estimation procedures for the two-parameter distribution	53
	5.91. Ungrouped data: estimation of μ and σ^2 , <i>p.</i> 53. 5.92. Grouped data: estimation of μ and σ^2 , <i>p.</i> 53. 5.93. Ungrouped data: estimation of α and β^2 , <i>p.</i> 54. 5.94. Grouped data: estimation of α and β^2 , <i>p.</i> 54	

Chapter 6. ESTIMATION PROBLEMS: II

6.1	Introduction	<i>page</i> 55
6.2	Estimation of the parameters of the three-parameter distribution	55
	6.21. The method of maximum likelihood, <i>p.</i> 55. 6.22. Cohen's least sample value method, <i>p.</i> 56. 6.23. The method of moments, <i>p.</i> 57. 6.24. The method of quantiles, <i>p.</i> 58. 6.25. Kemsley's method, <i>p.</i> 59. 6.26. The graphical method, <i>p.</i> 60. 6.27. Special devices, <i>p.</i> 60	
6.3	Experimental results: comparison of Kemsley's method and the methods of moments and quantiles	61
6.4	Summary of conclusions for the three-parameter distribution	63
6.5	Estimation of the parameters of the four-parameter distribution	65

Chapter 7. THE LOGNORMAL DISTRIBUTION AND PROBIT ANALYSIS

7.1	Introduction	66
7.2	Quantal and quantitative responses to stimuli	66
7.3	Notation	68
7.4	The estimation of quantal response	68
7.5	A comparison with the logistic curve	72
7.6	Convergence problems in quantal response computations	75
7.7	The estimation of quantitative response: the homoscedastic case	78
7.8	The estimation of quantitative response: a special case	81
7.9	The estimation of quantitative response: the heteroscedastic case	82
7.10	Extensions of the theory	84

Chapter 8. COMPARISONS OF LOGNORMAL POPULATIONS

8.1	Use of <i>t</i> - and <i>F</i> -tests for μ and σ^2	85
8.2	Comparison of estimates for α and β^2	85
8.3	The three-parameter distribution	86
8.4	The analysis of variance	86

*Chapter 9. TRUNCATED AND CENSORED DISTRIBUTIONS
AND THE TREATMENT OF ZERO OBSERVATIONS*

9.1	Definitions of truncation and censorship	<i>page</i> 87
9.2	Estimation of the parameters of the truncated distribution	88
9.3	Estimation of the parameters of the censored distribution	90
9.4	An application to the artificial samples	91
9.5	Distributions of counts	92
9.6	Grouped truncated and grouped censored distributions	94
9.7	The treatment of zero observations	94
9.8	A statistical model: the Δ -distribution	95
9.9	Estimation for the Δ -distribution	96

Chapter 10. EXAMPLES OF LOGNORMAL DISTRIBUTIONS

10.1	Introduction	100
10.2	Small-particle statistics	100
10.3	Economics and sociology	101
10.4	Biology	102
10.5	Anthropometry	103
10.6	The abundance of species and discrete counts	103
10.7	Household size	104
10.8	Physical and industrial processes	104
10.9	Astronomy	105
10.10	Ages at first marriage: a difficulty with the threshold parameter	105
10.11	Philology: classification problems: time as a logarithmic stimulus	105

Chapter 11. THE DISTRIBUTION OF INCOMES

11.1	Conceptual problems in describing the size-distribution of incomes	107
11.2	Criteria for statistical descriptions	108
11.3	Models of generation of income distributions	108
11.4	Statistical analysis of data	111

11.5	Interpretation of the parameters of the lognormal distribution	<i>page</i> 111
11.6	The test of practice	116
11.7	Summary and further suggestions	119

Chapter 12. APPLICATIONS OF LOGNORMAL THEORY IN THE ANALYSIS OF CONSUMERS' BEHAVIOUR

12.1	Introduction	121
12.2	The transition from micro-models to macro-models	121
12.3	The primacy of the Engel curve in empirical work	124
12.4	The derivation of an Engel curve for an indivisible good	124
12.5	The extension of the theory to a divisible good	126
12.6	The problem of inferior goods	127
12.7	The consolidation of commodities and of groups of consumers	129
12.8	The economic interpretation of the parameters of the Engel curve	130
12.9	The problem of additivity	131
12.10	The influence of prices	134
12.11	Changes in preferences	136
12.12	The effects of household composition	137
12.13	Aggregation and the analysis of time series	138
12.14	Concluding remarks	139

Chapter 13. COMPUTATION PROBLEMS

13.1	The use of an electronic computer	141
13.2	Description of the EDSAC	141
13.3	The processing of the 65 samples	142
13.4	The programme for quantal probit analysis	143
13.5	The programme for quantitative probit analysis	144
13.6	The convergence programme	145
13.7	The construction of tables for $\psi_n(t)$ and $\chi_n(t)$	145
	References	146

Appendix A.	TABLES OF FUNCTIONS	154
-------------	---------------------	-----

Appendix B.	THE RESULTS OF APPLYING THE DIFFERENT METHODS OF ESTIMATION TO THE 65 ARTIFICIAL SAMPLES	166
