Preface

vii

## **Part I: Getting Started**

---

### **1. Introduction**

**3**

Essential Definitions	4
<i>Sample and Population</i>	
<i>Level of Measurement</i>	
Mathematical Necessities	8
<i>Rounding</i>	
<i>Proportions, Percentages, and Odds</i>	
<i>Squares and Square Roots</i>	
<i>Logarithms</i>	
<i>Summation Sign</i>	
Using a Calculator in Statistical Work	13
Summary	14
Problems	14

## **Part II: Descriptive Statistics**

---

### **2. The Distribution of Scores**

**21**

The Frequency Table and Histogram	22
<i>Rank Ordering</i>	
<i>Grouping</i>	
<i>Graphing</i>	
Outliers	26
Features of Distributions	28
Stem and Leaf Display	33
Smoothing the Frequencies	36
Summary	38
Problems	38

<b>3. Central Tendency</b>	<b>42</b>
Measures of Central Tendency	43
Computation of Central Tendency	45
Properties of the Mean	49
Grouped Data	50
Summary	51
Problems	52
<b>4. Variability</b>	<b>56</b>
Measures of Variability	59
<i>The Range</i>	
<i>The Interquartile Range</i>	
<i>The Standard Deviation</i>	
Detection of Outliers	67
Computational Errors and Checks	67
Summary	68
Problems	69
<b>5. Transformation</b>	<b>73</b>
No-Stretch Transformations	75
<i>Change in the Unit of Measurement</i>	
<i>Change of Scale Limits</i>	
<i>Reversal</i>	
<i>Standard Scores</i>	
One-Stretch Transformations	78
<i>Square Root</i>	
<i>Logarithm</i>	
<i>Reciprocal</i>	
Two-Stretch Transformations	82
<i>Arcsin</i>	
<i>Probit</i>	
<i>Logit</i>	
Flat Transformations	83
<i>Rank Order</i>	
<i>Percentile Rank</i>	
Two-Variable Transformations	85
Summary	86
Problems	87
<b>6. Measuring Association: The Regression Coefficient</b>	<b>90</b>
The Regression Coefficient	93
<i>The Average Slope</i>	
<i>The Best-Fitting Line</i>	
The Regression Equation	98
Computation	98
Interpretation of a Regression Coefficient	101
Regression Toward the Mean	103

Summary	103	
Problems	104	
<b>7. Relationship: The Correlation Coefficient</b>		<b>108</b>
Rationale for the Correlation Coefficient	109	
Computation	110	
Interpretation of $r$	111	
Factors Affecting the Size of $r$	116	
<i>Nonlinearity</i>		
<i>Unreliability</i>		
<i>Aggregation</i>		
<i>Part-Whole Correlation</i>		
<i>Restriction in Range</i>		
<i>Outliers</i>		
Correlation and Causality	122	
Summary	123	
Problems	124	
<b>8. Measures of Association: Ordinal and Nominal Variables</b>		<b>127</b>
Shape, Location, Variation, and Transformation	128	
<i>Nominal Variables</i>		
<i>Ordinal Variables</i>		
Relationship	131	
<i>Two Dichotomies</i>		
<i>Nominal Variables with More than Two Levels</i>		
<i>Ordinal Variables: Spearman's Rho</i>		
Summary	140	
Problems	140	

### **Part III: Inferential Statistics**

---

<b>9. Statistical Principles</b>		<b>147</b>
Sample and Population	147	
Random and Independent Sampling	149	
Sampling Distribution	151	
Properties of Statistics	152	
<i>Bias</i>		
<i>Efficiency</i>		
Binomial Distribution	154	
Summary	155	
Problems	156	
<b>10. The Normal Distribution</b>		<b>159</b>
Properties of a Normal Distribution	159	
Standard Normal Distribution	162	

## Contents

<i>Determining Probabilities</i>	
<i>Determining Percentile Ranks</i>	
Data Transformations	168
<i>Proportions</i>	
<i>Ranks</i>	
Summary	170
Problems	171
<b>11. <i>Special Sampling Distributions</i></b>	<b>174</b>
The Standard Normal Distribution	174
<i>t</i> Distribution	177
Chi Square Distribution	179
<i>F</i> Distribution	180
Relation Between Sampling Distributions	180
Summary	182
Problems	182
<b>12. <i>Testing a Model</i></b>	<b>184</b>
What Is a Model?	184
Model Comparison	186
The Test Statistic and Its Sampling Distribution	190
Significance Level and <i>p</i> Value	192
The Summary of the Logic of Model Comparison	194
Errors in Model Comparison	196
Remainder of the Book	198
Summary	199
Problems	200
<b>13. <i>The Two-Group Design</i></b>	<b>203</b>
Model	203
Assumptions	207
<i>Normality</i>	
<i>Equal Variances</i>	
<i>Independence</i>	
Paired <i>t</i> Test	209
Computational Formulas	211
Effect Size and Power	211
<i>Effect Size</i>	
<i>Power</i>	
Design Considerations	214
Illustrations	216
<i>Example 1</i>	
<i>Example 2</i>	
<i>Example 3</i>	
<i>Example 4</i>	
Summary	219
Problems	220

<b>14. One-Way Analysis of Variance</b>	<b>224</b>
The ANOVA Model	225
Estimation and Testing	228
<i>The Analysis of Variance Table</i>	
<i>Computational Formulas for the Sum of Squares</i>	
<i>Test of the Constant</i>	
Assumptions and Interpretation	233
Power and Measure of Effect Size	234
Contrasts	235
Post Hoc Tests	237
Illustrations	238
<i>Example 1</i>	
<i>Example 2</i>	
<i>Example 3</i>	
Summary	241
Problems	242
<b>15. Two-Way Analysis of Variance</b>	<b>246</b>
Factorial Design	246
Definitions	247
The Concepts of Main Effect and Interaction	250
Estimation and Definitional Formulas	254
The Computation of Two-Way Analysis of Variance	255
<i>Assumptions and Power</i>	
<i>Example</i>	
Generalization to Higher-Order Analysis of Variance	262
Repeated Measures Design	264
Summary	265
Problems	266
<b>16. Testing Measures of Association</b>	<b>270</b>
Tests of Correlation Coefficients	271
<i>A Single Correlation Coefficient</i>	
<i>Test of the Difference Between Two Independent Correlations</i>	
<i>More than Two Independent Correlations</i>	
<i>Correlated Correlations</i>	
Tests of Regression Coefficients	283
<i>Single Regression Coefficient</i>	
<i>Two Independent Regression Coefficients</i>	
<i>Two Correlated Regression Coefficients</i>	
Choice of Test	287
Summary	288
Problems	288
<b>17. Models for Nominal Dependent Variables</b>	<b>292</b>
Test of Independence of Two Nominal Variables	295
<i>Assumptions</i>	

## Contents

McNemar Test	299
<i>Assumptions</i>	
<i>Example</i>	
$\chi^2$ Goodness of Fit Test	301
<i>Assumptions</i>	
<i>Example</i>	
Other Models for Nominal Dependent Variables	303
Summary	303
Problems	304
<b>18. Models for Ordinal Dependent Variables</b>	<b>308</b>
Mann-Whitney $U$ Test	310
<i>Both <math>n_1</math> and <math>n_2</math> Are Less than or Equal to 20</i>	
<i>Either <math>n_1</math> or <math>n_2</math> Is Greater than 20</i>	
<i>Examples</i>	
Sign Test	314
Kruskal-Wallis Analysis of Variance	316
Friedman Two-Way ANOVA	317
Spearman's Rank-Order Coefficient	318
Power Efficiency	321
Summary	322
Problems	323
Postscript	327
References	328
<i>Appendix A:</i> Two-Stretch Transformations of Proportions: Arcsin, Probit, and Logit	333
<i>Appendix B:</i> Random Number Table	335
<i>Appendix C:</i> Probabilities for the $Z$ Distribution	341
<i>Appendix D:</i> Two-Tailed Critical Values of $t$	345
<i>Appendix E:</i> Critical Values for the $F$ Distribution	347
<i>Appendix F:</i> I. Transformation of $r$ to Fisher's $z$ II. Transformation of Fisher's $z$ to $r$	355
<i>Appendix G:</i> Critical Values for Chi Square	359
<i>Appendix H:</i> Two-Tailed Critical Values for the Mann-Whitney $U$ Test	361
<i>Appendix I:</i> Two-Tailed Critical Values for the Sign Test ( $n < 26$ )	367
<i>Appendix J:</i> Two-Tailed Critical Values for Spearman's Rho	369
Answers to Selected Problems	371
Glossary of Symbols	390
Mathematical Symbols	390
Statistical Symbols	390
Greek Letters	391
Glossary of Terms	392
Index	401
