<i>Preface</i>	vii
--------------------------	-----

PART I. THE DISCRETE FINITE DIFFERENCE CALCULUS

<i>Chapter 1. THE DIFFERENCE CALCULUS</i>	3
1.1 Introduction and Notation	3
1.2 The Difference Operator	5
1.3 Repeated Differences	7
1.4 The Difference Table	9
1.5 Factorials	13
1.6 Synthetic Division	16
*1.7 Stirling Numbers of the First Kind	18
*1.8 Stirling Numbers of the Second Kind	20
1.9 An Example.	21
1.10 Alternative Notations	22
1.11 General Remarks and References	23
 <i>Chapter 2. ROUND OFF NOISE</i>	 24
2.1 Introduction	24
2.2 Range Arithmetic	24
2.3 Double Precision	25
2.4 Significant-digit Arithmetic	26
2.5 The Statistical Approach	26
2.6 Random Roundoff	27
2.7 Variable Precision	27
2.8 Estimating the Noise in a Table	27
2.9 "Least-significant-digit" Theory	33
2.10 "Most-significant-digit" Theory	35
2.11 On Analyzing Error Propagation in a Short Calculation	39
2.12 General Remarks and References	39
 <i>Chapter 3. THE SUMMATION CALCULUS</i>	 41
3.1 Introduction and Notation	41
3.2 Summation Formulas	43
3.3 Summation by Parts	45
3.4 General Remarks	46

Chapter 4. EVALUATION OF INFINITE SERIES	47
4.1 Introduction	47
4.2 Kummer's Comparison Method	48
4.3 Some Special Sums	50
4.4 Euler's Method	50
4.5 A Nonlinear Transformation	54
4.6 Power Series	55
4.7 Expansions in Special Functions	56
4.8 Integrals as Approximations to Sums	57
4.9 The Digamma Function	57
Chapter 5. FINITE DIFFERENCE EQUATIONS	60
5.1 Notation	60
5.2 An Example of a First-order Difference Equation	61
5.3 An Example of a Second-order Equation	62
5.4 Linear Difference Equations with Constant Coefficients	63
5.5 An Example	65
Chapter 6. THE FINITE FOURIER SERIES	67
6.1 Introduction	67
6.2 Orthogonality over a Discrete Set of Points	67
6.3 Accuracy of the Expansion	69
6.4 Numerical Computation of the Coefficients	71
6.5 Fourier Analysis Using 12 Points	74
6.6 Minimum Multiplication Methods	76
6.7 Cosine Expansions	76
6.8 Local Fourier Series	77
PART II. POLYNOMIAL APPROXIMATION—CLASSICAL NUMERICAL ANALYSIS	
Chapter 7. INTRODUCTION TO POLYNOMIAL APPROXIMATIONS	81
7.1 Orientation	81
7.2 Alternative Formulations	82
7.3 Samples; Information	86
7.4 The Class of Functions	86
7.5 Goodness of Fit	88
7.6 Accuracy	89
Chapter 8. POLYNOMIAL INTERPOLATION—ARBITRARILY SPACED DATA	91
8.1 Philosophy	91
8.2 Interpolation Polynomials	91
8.3 The Lagrange Method of Interpolation	94
8.4 Newton's Interpolation Formula	97
8.5 An Alternative Form for the Divided Difference Table	100
8.6 Error of Polynomial Approximations	102
8.7 Difficulty of Polynomial Approximation	104
8.8 On Selecting Sample Points	108

<i>Chapter 9.</i>	POLYNOMIAL INTERPOLATION—EQUALLY SPACED DATA	109
9.1	Newton's Formula for Interpolation	109
9.2	Interpolation in Tables	110
9.3	The Lozenge Diagram	111
9.4	Remarks on These Formulas	115
9.5	Miscellaneous Interpolation Formulas	116
 <i>Chapter 10.</i>	 A UNIFORM METHOD FOR FINDING FORMULAS	 118
10.1	Introduction	118
10.2	Some Typical Integration Formulas	119
10.3	Assigned Sample Points	124
10.4	Some Examples of Formulas	126
10.5	Function Value and Derivative at Assigned Points	128
10.6	No Assigned Sample Points; Gaussian Quadrature	130
10.7	Some Sample Points Assigned	132
10.8	Analytical Remarks	133
10.9	Linear Restraints on the Weights	135
10.10	The Gregory Formula	138
10.11	Summary	141
 <i>Chapter 11.</i>	 ON FINDING THE ERROR TERM OF A FORMULA	 143
11.1	Need for an Error Term	143
11.2	The Order of the Error Term	143
11.3	The Influence Function $G(s)$	144
11.4	When $G(s)$ Has a Constant Sign	147
11.5	When $G(s)$ Is Not of Constant Sign	149
11.6	The Flaw in the Taylor-series Approach	151
 <i>Chapter 12.</i>	 FORMULAS FOR DEFINITE INTEGRALS	 153
12.1	Introduction	153
12.2	Newton-Cotes Formulas	156
12.3	The Use of the Gregory Formula	158
12.4	Open Formulas	159
12.5	Gaussian Quadrature	160
12.6	Miscellaneous Gauss-type Integration Formulas	161
12.7	Summation of Series	162
12.8	Change-of-scale Effects	162
12.9	Integrals with a Parameter	164
 <i>Chapter 13.</i>	 INDEFINITE INTEGRALS	 165
13.1	Outline of Chapter and Notation	165
13.2	Some Simple Formulas for Indefinite Integrals	166
13.3	A General Approach	168
13.4	Truncation Error	169
13.5	Stability	172
13.6	Roundoff Noise	176
13.7	Summary	177
13.8	Some General Remarks	179

13.9	Experimental Verification of Stability	180
*13.10	An Example of a Convolution Integral Which Illustrates the Concept of Stability	181
Chapter 14.	INTRODUCTION TO DIFFERENTIAL EQUATIONS	183
14.1	The Source and Meaning of Differential Equations	183
14.2	The Direction Field	184
14.3	The Numerical Solution	185
14.4	An Example.	187
14.5	Stability of the Predictor Alone	189
14.6	Stability of the Corrector	190
14.7	Some General Remarks	192
14.8	Systems of Equations	193
Chapter 15.	A GENERAL THEORY OF PREDICTOR-CORRECTOR METHODS.	194
15.1	Introduction	194
15.2	Truncation Error	195
15.3	Stability	197
15.4	Roundoff Noise	200
15.5	The Three-point Predictor	201
15.6	Milne-type Predictors	202
15.7	Adams-Bashforth-type Predictors	203
15.8	General Remarks on the Choice of a Method	204
15.9	Choice of Predictor.	205
15.10	Selected Formulas	206
15.11	Designing a System	207
15.12	Numerical Verification	209
Chapter 16.	SPECIAL METHODS OF INTEGRATING ORDINARY DIFFERENTIAL EQUATIONS	211
16.1	Introduction and Outline	211
16.2	Runge-Kutta Methods.	212
16.3	Second-order Equation Methods When y' Is Missing	213
16.4	Linear Equations	214
16.5	A Method Which Uses y , y' , and y'' Values	215
16.6	When the Solution Is Not Easily Approximated by a Polyno- mial	216
16.7	Two-point Problems	219
Chapter 17.	LEAST SQUARES: THEORY	223
17.1	Introduction	223
17.2	The Principle of Least Squares	224
17.3	Other Choices	225
17.4	The Normal Law of Errors	226
17.5	Polynomial Curve Fitting.	229
17.6	Orthogonal Functions	231
17.7	General Properties of Orthogonal Functions	234
17.8	Bessel's Inequality and Completeness	236
17.9	Least-squares Fit and the Fourier Coefficients	237
17.10	Orthogonal Polynomials	238

17.11	The Classical Orthogonal Polynomials	240
17.12	A Comparison of Least Squares and Power Series Expansion	241
17.13	Least Squares with Restraints; Continuation of the Example in Sec. 1.9.	242
17.14	Concluding Remarks on Least Squares	242
<i>Chapter 18.</i>	LEAST SQUARES: PRACTICE.	244
18.1	General Remarks on the Polynomial Situation	244
18.2	The Three-term Recurrence Relation	244
18.3	The Construction of Quasi-orthogonal Polynomials	246
18.4	The Nonpolynomial Case	247
18.5	Nonlinear Parameters	247
<i>Chapter 19.</i>	CHEBYSHEV POLYNOMIALS.	249
19.1	Introduction	249
19.2	Some Identities	251
19.3	The Chebyshev Criterion	252
19.4	Economization	253
19.5	Mechanization of Economization	255
19.6	The Shifted Chebyshev Polynomials	257
19.7	Lanczos' τ Process	258
19.8	A Variation of the τ Method	260
19.9	Some Remarks on Chebyshev Approximation	262
19.10	The Criterion of Matching Moments	262
<i>Chapter 20.</i>	RATIONAL FUNCTIONS	265
20.1	Introduction	265
20.2	The Direct Approach	265
20.3	Chebyshev Approximation by Rational Functions	267
*20.4	Reciprocal Differences	268
*20.5	An Example	271

PART III. NONPOLYNOMIAL APPROXIMATION

<i>Chapter 21.</i>	PERIODIC FUNCTIONS—FOURIER APPROXIMATION.	275
21.1	Purpose of This Theory	275
21.2	Aliasing; the Effect of Sampling	276
21.3	Fourier Series; Periodic Phenomena	278
21.4	Interpolation of Periodic Functions	280
21.5	Integration	284
21.6	The General-operator Approach	285
21.7	Some Remarks on the General Method	288
<i>Chapter 22.</i>	THE CONVERGENCE OF FOURIER SERIES	290
22.1	Convergence of Power Series and Fourier Series	290
22.2	Functions with a Simple Discontinuity	290
22.3	Function Having Continuous Higher Derivatives	293
22.4	Improving the Convergence of a Fourier Series	293
22.5	The Power Spectrum	294
22.6	The Gibbs Phenomenon	295
22.7	Lanczos' σ Factors	297

22.8	A Comparison of Convergence Methods	298
22.9	Lanczos' Differentiation Technique	300
Chapter 23.	NONPERIODIC FUNCTIONS—THE FOURIER INTEGRAL	301
23.1	Purpose of the Chapter	301
23.2	Notation and Summary of Results	302
23.3	The Fourier Integral	306
23.4	Some Transform Pairs	307
23.5	Band-limited Functions and the Sampling Theorem	308
23.6	The Convolution Theorem	310
23.7	The Effect of a Finite Sample Size	311
Chapter 24.	LINEAR FILTERS—SMOOTHING AND DIFFERENTIATING	313
24.1	Introduction	313
24.2	An Example of a Simple Smoothing Filter	314
24.3	An Example of the Design of a Filter	315
24.4	Filters in General	317
24.5	Analysis of a Simple Formula for Differentiating	318
24.6	Avoiding Estimation of Derivatives	319
24.7	Filon's Method	319
24.8	Closing Remarks	321
Chapter 25.	INTEGRALS AND DIFFERENTIAL EQUATIONS	323
25.1	Outline of Chapter	323
25.2	The Transfer-function Approach to Integration Formulas	324
25.3	General Integration Formulas	328
25.4	Differential Equations	331
25.5	Chebyshev Design of Filters	332
25.6	Some Details of Chebyshev Design	334
Chapter 26.	EXPONENTIAL APPROXIMATION	338
26.1	Introduction	338
26.2	On Finding Formulas Using Exponentials When the Exponents Are Known	338
26.3	Unknown Exponents	340
26.4	Warnings	341
26.5	Exponentials and Polynomials	342
26.6	Error Terms	342
Chapter 27.	SINGULARITIES	343
27.1	Introduction	343
27.2	Some Details of an Integral with a Singularity at Infinity	343
27.3	A Singularity in a Linear Differential Equation	344
27.4	General Remarks	347
PART IV. ALGORITHMS AND HEURISTICS		
Chapter 28.	ON FINDING ZEROS	351
28.1	Algorithms and Heuristics	351
28.2	The Bisection Method for Finding a Real Zero	352
28.3	Linear Interpolation	353

28.4	Parabolic Interpolation	353
28.5	Some General Remarks	354
28.6	Bairstow's Method for Finding Zeros of a Polynomial.	356
<i>Chapter 29.</i>	SIMULTANEOUS LINEAR ALGEBRAIC EQUATIONS	360
29.1	Introduction	360
29.2	Gauss Elimination Methods	360
29.3	Variants of the Gauss Method	362
29.4	Gauss-Seidel Method	363
29.5	Increased Accuracy	364
29.6	General Remarks	364
<i>Chapter 30.</i>	INVERSION OF MATRICES AND EIGENVALUES	366
30.1	Introduction	366
30.2	Matrix Inversion by Gauss Elimination.	366
30.3	The Eigenvalue Problem	367
30.4	The Smallest Eigenvalues	369
30.5	A Few Remarks	369
<i>Chapter 31.</i>	SOME EXAMPLES OF THE SIMULATION OF SITUATIONS AND PROCESSES	370
31.1	Introduction	370
31.2	A Simple Example of a Discrete Simulation	371
31.3	An Example of an Inventory Simulation	375
31.4	Three-dimensional Tic-Tac-Toe	377
31.5	General Remarks on Discrete Simulations	381
31.6	Continuous Simulations	381
<i>Chapter 32.</i>	RANDOM NUMBERS AND MONTE CARLO METHODS	383
32.1	The Idea of a Random Number	383
32.2	Generation of Random Numbers on a Binary Machine	384
32.3	Generation of Random Numbers on a Decimal Machine	388
32.4	Other Distributions	388
32.5	Monte Carlo Methods	390
32.6	Another Illustration of Monte Carlo Methods	392
32.7	Swindles	392
<i>Chapter N + 1.</i>	THE ART OF COMPUTING FOR SCIENTISTS AND ENGINEERS	394
N + 1.1	Importance of the Topic	394
N + 1.2	What Are We Going to Do with the Answer?	395
N + 1.3	What Do We Know?	396
N + 1.4	Arranging the Computation	397
N + 1.5	Iteration of the Above Steps	398
N + 1.6	Estimation of the Effort Needed to Solve the Problem	398
N + 1.7	Learning from Changes in the Plan	399
N + 1.8	The Open Shop Philosophy	400
N + 1.9	Closing Remarks	401
	<i>References</i>	403
	<i>Index.</i>	405
