

CONTENTS

PREFACE	v
ACKNOWLEDGMENTS	ix
Chapter 1	
BASIC CONCEPTS OF STATISTICAL MODELS	1
1.1 Introduction	1
1.2 Basic Concepts	3
1.3 Uses and Selection of Statistical Models	7
1.4 Definition of Terms	9
Chapter 2	
CONCEPTS OF STATISTICAL THEORY	11
2.1 Introduction	11
2.2 Probability	11
2.3 Probability Distributions in a Single Variable	20
2.4 Multivariate Probability Distributions	29
2.5 Marginal and Conditional Distributions and Stochastic Independence for Bivariate Distributions and Moments	35
2.6 Principles of Statistical Estimation	49
2.7 Confidence Intervals and Tests of Statistical Hypotheses	56
References	60
Chapter 3	
MODELS FOR MEASUREMENT: CONTINUOUS CASE	61
3.1 Introduction	61
3.2 The Exponential Model	61
3.3 The Weibull Model	72
3.4 The Gamma Model	79
3.5 Other Continuous Models for Measurement	86
References	103

Chapter 4	
MODELS FOR MEASUREMENT: DISCRETE CASE	105
4.1 Introduction	105
4.2 The Binomial Model	106
4.3 The Poisson Model	115
4.4 The Hypergeometric Model	127
4.5 The Geometric and Negative Binomial Models	133
4.6 The Multinomial Model	139
4.7 Compound Models	144
4.8 Power Series Models	154
References	159
Chapter 5	
EMPIRICAL MODELS	161
5.1 Introduction	161
5.2 Systems for Classification of Distributions	163
5.3 The Generalized Lambda Family	178
5.4 The Johnson System	194
5.5 The Pearson Family	220
References	223
Chapter 6	
TESTING MODEL ASSUMPTIONS	225
6.1 Introduction	225
6.2 Regression Tests	227
6.3 Distance Tests	251
6.4 Chi-Square Goodness-of-Fit Test	258
References	265
Chapter 7	
ANALYSIS OF SYSTEMS	268
7.1 Introduction	268
7.2 Monte Carlo Simulation	273
7.3 Propagation of Moments	296
7.4 Case Studies	310
References	326
Appendix A	
TABLES	327
Appendix B	
EQUATION FOR $E(y^4)$ IN THE PROPAGATION-OF-MOMENTS TECHNIQUE	357
AUTHOR INDEX	361
SUBJECT INDEX	363
