

# TABLE OF CONTENTS

|  |     |
|--|-----|
| FOREWORD . . . . .   | 7   |
| LIST OF TABLES . . . . .   | 14  |
| Chapter 1. INTRODUCTION . . . . .  | 17  |
| 1.1. Randomization model analysis . . . . .  | 22  |
| 1.2. Weighted least squares functional modeling . . . . .  | 24  |
| 1.3. Maximum likelihood log-linear modeling . . . . .  | 26  |
| 1.4. Issues concerning the choice of analysis . . . . .  | 29  |
| 1.4.1. Factor-response structure . . . . .   | 30  |
| 1.4.2. Function selection . . . . .  | 31  |
| 1.4.3. Domain of statistical inference . . . . .   | 32  |
| 1.4.4. Distributional assumptions . . . . .  | 33  |
| 1.4.5. Validity of asymptotic approximations . . . . .   | 34  |
| 1.4.6. Structural smoothing . . . . .  | 35  |
| 1.4.7. Computational tractability . . . . .  | 36  |
| 1.5. Continuous-categorical analytic analogies . . . . .   | 38  |
| Chapter 2. MODIFIED CHI-SQUARE METHODS, WALD STATISTICS, AND WEIGHTED LEAST<br>SQUARES . . . . . | 42  |
| 2.1. Overview . . . . .  | 43  |
| 2.2. Poisson data situations . . . . .   | 46  |
| 2.2.1. The strictly linear model . . . . .   | 51  |
| 2.2.2. The log-linear model . . . . .  | 55  |
| 2.2.3. A functional linear model . . . . .   | 59  |
| 2.2.4. Summary statement . . . . .   | 62  |
| 2.3. Product multinomial data . . . . .  | 64  |
| 2.3.1. The strictly linear model . . . . .   | 77  |
| 2.3.2. The log-linear model . . . . .  | 79  |
| 2.3.3. Other functional linear models . . . . .  | 84  |
| 2.3.4. Summary statement . . . . .   | 86  |
| 2.4. Case record data and other general situations . . . . .                                     | 88  |
| 2.4.1. Linear models for means . . . . .   | 89  |
| 2.4.2. The functional linear model . . . . .   | 95  |
| 2.4.3. Sample survey applications . . . . .  | 101 |
| 2.4.4. Summary statement . . . . .   | 105 |

|         |   |     |
|---------|---|-----|
| 2.5.    | Examples . . . . .  | 106 |
| 2.5.1.  | A study concerning litter sizes for births of sheep . . .                                   | 109 |
| 2.5.2.  | A medical study concerning treatments for urinary tract infections . . . . .                | 120 |
| 2.5.3.  | A crossover study concerning treatments for heartburn . .                                   | 128 |
| 2.5.4.  | A psychological study concerning sexual symbolism . . . .                                   | 133 |
| 2.5.5.  | A medical study concerning obstetrical-related pain . . .                                   | 139 |
| 2.5.6.  | An analysis of National Health Survey estimates for extreme armgirth . . . . .              | 147 |
| 2.5.7.  | Agreement of biochemical and self-report measures of smoking . . . . .                      | 152 |
| 2.5.8.  | Evaluation of a test diagnostic procedure relative to standard . . . . .                    | 157 |
| 2.5.9.  | Homogeneity of the association between treatment and response in a clinical trial . . . . . | 162 |
| 2.5.10. | An epidemiologic analysis of incidence rates for melanoma . . . . .                         | 167 |
| 2.5.11. | An observational study of survival for kidney dialysis patients . . . . .                   | 172 |
| 2.5.12. | Survival of plasmacytic myeloma patients . . . . .  | 182 |

### Chapter 3. MAXIMUM LIKELIHOOD METHODS . . . . . 188

|        |  |     |
|--------|--|-----|
| 3.1.   | Overview . . . . .   | 189 |
| 3.2.   | Log-linear models for Poisson data . . . . .   | 192 |
| 3.3.   | Log-linear models for product multinomial data . . . . .   | 194 |
| 3.4.   | Other applications of likelihood methods . . . . .   | 199 |
| 3.5.   | Examples . . . . .   | 199 |
| 3.5.1. | Maximum likelihood fit of the melanoma incidence data . .  | 201 |
| 3.5.2. | Piecewise exponential survival models for the kidney dialysis data . . . . .                                   | 202 |
| 3.5.3. | Maximum likelihood fit of the urinary tract infection data . . . . .   | 207 |
| 3.5.4. | Logit analyses of tumor resistance in a rat nutrition and cancer experiment . . . . .                          | 209 |
| 3.5.5. | Logistic regression on mixed categorical and continuous factors: correlates of coronary artery disease . . . . | 214 |
| 3.5.6. | An equal adjacent odds ratio model for data from a surgical clinical trial . . . . .                           | 218 |

### Chapter 4. RANDOMIZATION MODEL METHODS . . . . . 224

|        |  |     |
|--------|--|-----|
| 4.1.   | Sets of $2 \times 2$ contingency tables . . . . .                                    | 226 |
| 4.2.   | Sets of $s \times r$ contingency tables . . . . .                                    | 232 |
| 4.3.   | Case record data . . . . .   | 241 |
| 4.4.   | Examples . . . . .   | 245 |
| 4.4.1. | A medical study concerning two treatments for a gastrointestinal condition . . . . . | 246 |
| 4.4.2. | A study concerning litter sizes for births of sheep . . .                            | 248 |
| 4.4.3. | A medical study concerning three treatments for urinary tract infections . . . . .   | 250 |
| 4.4.4. | A crossover study concerning treatments for heartburn . .                            | 253 |

|  |  |     |
|--|--|-----|
| 4.4.5.   | A medical study concerning obstetrical-related pain . . .  | 254 |
| 4.4.6.   | A medical study concerning rheumatoid arthritis . . . . .  | 255 |
| 4.4.7.   | Dumping syndrome severity for patients receiving one<br>of four surgical operations for duodenal ulcer . . . . . | 256 |
| 4.4.8.   | A medical study concerning time to healing for a<br>gastrointestinal condition . . . . .                         | 258 |
| 4.4.9.   | An observational study of survival for kidney dialysis<br>patients . . . . .                                     | 260 |
| Chapter 5. COMPARATIVE ANALYSES OF A DRUG EFFICACY TRIAL . . . . . |  | 262 |
| 5.1.   | Randomization model analyses . . . . .   | 264 |
| 5.2.   | Weighted least-squares modeling of mean scores . . . . .   | 267 |
| 5.3.   | Maximum-likelihood analyses of odds . . . . .  | 272 |
| 5.4.   | Summary . . . . .  | 278 |
| BIBLIOGRAPHY . . . . .   |  | 280 |
