Preface ix

1 Preliminaries 1
- 1.1 Introduction 1
- 1.2 Normal theory linear model 3
- 1.3 Exponential models 4
- 1.4 Transformation models 8
- 1.5 Invariance 10
- Further results and exercises 11
- Bibliographic notes 13

2 Some general concepts 14
- 2.1 Introduction 14
- 2.2 Likelihood 14
- 2.3 Sufficiency 28
- 2.4 Conditioning and some general concepts 32
- 2.5 Ancillarity 36
- 2.6 Examination of model adequacy 45
- 2.7 Parameter orthogonality 49
- 2.8 Review of transformation models 52
- 2.9 Review of prime exponential models 61
- 2.10 Review of curved exponential models 65
- Further results and exercises 72
- Bibliographic notes 78

3 First-order theory 80
- 3.1 Introduction 80
- 3.2 Main statistics: no nuisance parameters 80
- 3.3 Distribution theory: no nuisance parameters 85
- 3.4 Profile likelihood 89
- 3.5 Further statistics: nuisance parameter case 91

3.6 Effects of parameter orthogonality 98
3.7 Distribution theory: nuisance parameter case 100
3.8 Non-standard cases 106
Further results and exercises 111
Bibliographic notes 117

4 Higher-order theory: preliminaries and motivations 119
4.1 Introduction 119
4.2 Choice between different statistics: qualitative considerations 119
4.3 The reasons for modifying simple likelihood-based methods 123
4.4 Higher-order theory: the key questions 131
Further results and exercises 139
Bibliographic notes 141

5 Some tools of higher-order theory 143
5.1 Introduction 143
5.2 Log-likelihood derivatives and mixed log model derivatives 145
5.3 Expansion of likelihood quantities: expected/observed case 148
5.4 Expansion of likelihood quantities: observed case 155
5.5 Translation between observed and expected expressions 157
5.6 Yokes and invariant calculations 161
5.7 Appendix: Differentiation of matrix quantities 168
Further results and exercises 169
Bibliographic notes 170

6 Higher-order theory: likelihood combinants 172
6.1 Introduction 172
6.2 The p^*-formula 173
6.3 The score and the profile score 179
6.4 The maximum likelihood estimator revisited 184
6.5 The likelihood ratio 188
6.6 The directed likelihood 201
6.7 Approximate interval probabilities 211
Further results and exercises 217
Bibliographic notes 222

7 Higher-order theory: some further results and tools **225**
7.1 Introduction 225
7.2 Approximate sufficiency and ancillarity 225
7.3 Jacobians of conditionality structures 236
7.4 Derivation of $p^{\dagger}$ and p^{*} for curved exponential models 238
7.5 The effect of sampling rules 240
7.6 Independence of second order 251
Further results and exercises 255
Bibliographic notes 259

8 Various notions of pseudo-likelihood and higher-order theory **261**
8.1 Introduction 261
8.2 Modified profile likelihood 263
8.3 Stable adjustments of profile likelihood 269
8.4 Stable adjustments of directed likelihood 274
8.5 Large number of nuisance parameters 282
8.6 Further definitions of pseudo-likelihood 289
Further results and exercises 294
Bibliographic notes 296

9 Further aspects **298**
9.1 Pivots 298
9.2 Estimating equations and quasi-likelihood 301
9.3 Stochastic processes and time series 306
9.4 Prediction 314
9.5 Asymptotic randomization theory 320
Further results and exercises 327
Bibliographic notes 330
