Preface	vii
Introduction: Goals and problems of change-point detection	ix
Chapter 1	
Preliminary considerations	1
1.1 Auxiliary results from the theory of random processes and mathematical statistics	1
1.1.1 Mixing conditions	1
1.1.2 The Wiener process and some functionals related to it	2
1.1.3 Weak convergence	4
1.1.4 Martingales. Markov's moments. Wald's identity	7
1.2 General approach to change-point detection. Reduction to the basic problem	8
Chapter 2	
State-of-the-art review	11
2.1 <i>A posteriori</i> methods of change-point detection	13
2.2 Sequential methods of change-point detection	24
Chapter 3	
<i>A posteriori</i> change-point problems	36
3.1 Formulation of problems. Assumptions	36
3.2 Auxiliary results	40
3.3 Decision rules and methods of estimation. Limit theorems	53
3.4 Inequalities	73
3.5 Asymptotic analysis of <i>a posteriori</i> change-point detection methods	80
3.6 Concluding remarks to Chapter 3	91
Chapter 4	
Sequential change-point detection problems	95
4.0 Introduction	95
4.1 A nonparametric method of sequential change-point detection	96

4.2 Nonparametric versions of different sequential change-point methods and their asymptotic properties	102
4.2.1 Cumulative Sum (CUSUM) method	102
4.2.2 The Girshik–Rubin–Shiryaev (GRSh) method	107
4.2.3 The exponential smoothing method	111
4.2.4 "Moving-sample" methods of detection	113
4.3 Asymptotic comparative analysis of sequential nonparametric change-point detection methods	120
4.3.1 The main inequality	120
4.3.2 CUSUM and GRSh methods	122
4.3.3 Exponential smoothing and moving sample methods	136
4.3.4 Comparative study of change-point detection methods	137
4.4 The asymptotically optimal linear moving-sample method	141
4.5 Concluding remarks to Chapter 4	147
Chapter 5	
Disorder detection of random fields.	151
5.1 Formulation of the problem	151
5.2 Methods of detection of the parametric disorder regions.	152
5.3 Methods of detection of the nonparametric disorder regions.	161
5.3.1 Binary problem	161
5.3.2 General problem	164
Chapter 6	
Applications of nonparametric change-point detection methods	169
6.1 Detection of homogenous and non-homogenous segments in large historical texts	169
6.2 Detection of collisionless shock waves. Statistical analysis of space data	178
6.3 Analysis of geophysical data	180
Chapter 7	
Proofs, new results and technical details.	183
7.1 Proofs of theorems	183
7.2 Some new results	191
7.3 The algorithm and the program package for <i>a posteriori</i> change-point detection VERDIA (short overview)	195
References	199
