CONTENTS

Preface VII
Approximate Solution of Functional Equations: General Remarks 1

PART I: APPROXIMATE SOLUTION OF LINEAR ELLIPTIC EQUATIONS

1. The Projection Theorem 5
2. The Method of Galerkin 12
3. The Approximation of Normed Spaces 18
4. Approximation of Linear Variational Problems 31
5. A Method for Computation of the Error 40
6. The Method of Fractionary Steps 43

PART II: APPLICATIONS

7. Spaces of Functions Associated with an Open Set in $\mathbf{R}^n$ 53
8. Approximation of Some Function Spaces by Finite Differences (I) 59
9. Approximation of Some Function Spaces by Finite Differences (II) 70

10. Approximation of Some Function Spaces by Finite Element Methods 80
11. Example I: The Dirichlet Problem 105
12. Example II: The Neumann Problem 121

PART III: A NONLINEAR ELLIPTIC EQUATION

13. The Exact Problem 131
14. Approximate Problems 143

Appendix: Topological Vector Spaces 156
Bibliography 161
Index 165
