## CHAPTER 1

<i>Interpolation and Approximation</i>	1
1.1 Introduction	1
1.2 Approximating Functions	2
1.3 Polynomial Approximation—A Survey	3
<i>The Interpolating Polynomial</i>	3
<i>The Least-Squares Polynomial</i>	3
<i>The Minimax Polynomial</i>	4
<i>Power Series</i>	4
1.4 Evaluation of Polynomials and Their Derivatives	6
1.5 The Interpolating Polynomial	8
1.6 Newton's Divided-Difference Interpolating Polynomial	9
1.7 Lagrange's Interpolating Polynomial	27
1.8 Polynomial Interpolation with Equally Spaced Base Points	35
<i>Forward Differences</i>	35
<i>Backward Differences</i>	36
<i>Central Differences</i>	37
1.9 Concluding Remarks on Polynomial Interpolation	39
1.10 Chebyshev Polynomials	39
1.11 Minimizing the Maximum Error	41
1.12 Chebyshev Economization—Telescoping a Power Series	43
<i>Problems</i>	60
Bibliography	68

## CHAPTER 2

<i>Numerical Integration</i>	69
2.1 Introduction	69
2.2 Numerical Integration with Equally Spaced Base Points	70
2.3 Newton-Cotes Closed Integration Formulas	71
2.4 Newton-Cotes Open Integration Formulas	75
2.5 Integration Error Using the Newton-Cotes Formulas	76
2.6 Composite Integration Formulas	77
2.7 Repeated Interval-Halving and Romberg Integration	90
2.8 Numerical Integration with Unequally Spaced Base Points	100

2.9	Orthogonal Polynomials	100
	<i>Legendre Polynomials: <math>P_n(x)</math></i>	100
	<i>Laguerre Polynomials: <math>\mathcal{L}_n(x)</math></i>	100
	<i>Chebyshev Polynomials: <math>T_n(x)</math></i>	100
	<i>Hermite Polynomials: <math>H_n(x)</math></i>	101
	<i>General Comments on Orthogonal Polynomials</i>	101
2.10	Gaussian Quadrature	101
	<i>Gauss-Legendre Quadrature</i>	101
	<i>Gauss-Laguerre Quadrature</i>	113
	<i>Gauss-Chebyshev Quadrature</i>	115
	<i>Gauss-Hermite Quadrature</i>	116
	<i>Other Gaussian Quadrature Formulas</i>	116
2.11	Numerical Differentiation	128
	<i>Problems</i>	131
	<i>Bibliography</i>	140

## CHAPTER 3

	<i>Solution of Equations</i>	141
3.1	Introduction	141
3.2	Graeffe's Method	141
3.3	Bernoulli's Method	142
3.4	Iterative Factorization of Polynomials	156
3.5	Method of Successive Substitutions	168
3.6	Ward's Method	169
3.7	Newton's Method	171
3.8	<i>Regula Falsi</i> and Related Methods	178
3.9	Rutishauser's QD Algorithm	196
	<i>Problems</i>	198
	<i>Bibliography</i>	209

## CHAPTER 4

	<i>Matrices and Related Topics</i>	210
4.1	Notation and Preliminary Concepts	210
4.2	Vectors	213
4.3	Linear Transformations and Subspaces	219
4.4	Similar Matrices and Polynomials in a Matrix	221
4.5	Symmetric and Hermitian Matrices	224
4.6	The Power Method of Mises	226
4.7	Method of Rutishauser	236
4.8	Jacobi's Method for Symmetric Matrices	250
4.9	Method of Danilevski	261
	<i>Problems</i>	263
	<i>Bibliography</i>	268

## CHAPTER 5

<i>Systems of Equations</i>	269
5.1 Introduction	269
5.2 Elementary Transformations of Matrices	269
5.3 Gaussian Elimination	270
5.4 Gauss-Jordan Elimination	272
5.5 A Finite Form of the Method of Kaczmarz	297
5.6 Jacobi Iterative Method	298
5.7 Gauss-Seidel Iterative Method	299
5.8 Iterative Methods for Nonlinear Equations	308
5.9 Newton-Raphson Iteration for Nonlinear Equations	319
<i>Problems</i>	330
<i>Bibliography</i>	340

## CHAPTER 6

<i>The Approximation of the Solution of Ordinary Differential Equations</i>	341
6.1 Introduction	341
6.2 Solution of First-Order Ordinary Differential Equations	341
<i>Taylor's Expansion Approach</i>	343
6.3 Euler's Method	344
6.4 Error Propagation in Euler's Method	346
6.5 Runge-Kutta Methods	361
6.6 Truncation Error, Stability, and Step-Size Control in the Runge-Kutta Algorithms	363
6.7 Simultaneous Ordinary Differential Equations	365
6.8 Multistep Methods	381
6.9 Open Integration Formulas	381
6.10 Closed Integration Formulas	383
6.11 Predictor-Corrector Methods	384
6.12 Truncation Error, Stability, and Step-Size Control in the Multistep Algorithms	386
6.13 Other Integration Formulas	390
6.14 Boundary-Value Problems	405
<i>Problems</i>	416
<i>Bibliography</i>	428

## CHAPTER 7

<i>Approximation of the Solution of Partial Differential Equations</i>	429
7.1 Introduction	429
7.2 Examples of Partial Differential Equations	429
7.3 The Approximation of Derivatives by Finite Differences	430
7.4 A Simple Parabolic Differential Equation	431
7.5 The Explicit Form of the Difference Equation	432

7.6	Convergence of the Explicit Form	432
7.7	The Implicit Form of the Difference Equation	440
7.8	Convergence of the Implicit Form	440
7.9	Solution of Equations Resulting from the Implicit Method	441
7.10	Stability	449
7.11	Consistency	450
7.12	The Crank-Nicolson Method	451
7.13	Unconditionally Stable Explicit Procedures	451
	<i>DuFort-Frankel Method</i>	451
	<i>Saul'yev Method</i>	451
	<i>Barakat and Clark Method</i>	452
7.14	The Implicit Alternating-Direction Method	452
7.15	Additional Methods for Two and Three Space Dimensions	453
7.16	Simultaneous First- and Second-Order Space Derivatives	462
7.17	Types of Boundary Condition	462
7.18	Finite-Difference Approximations at the Interface between Two Different Media	462
7.19	Irregular Boundaries	463
7.20	The Solution of Nonlinear Partial Differential Equations	464
7.21	Derivation of the Elliptic Difference Equation	482
7.22	Laplace's Equation in a Rectangle	483
7.23	Alternative Treatment of the Boundary Points	483
7.24	Iterative Methods of Solution	484
7.25	Successive Overrelaxation and Alternating-Direction Methods	508
7.26	Characteristic-Value Problems	508
	<i>Problems</i>	520
	Bibliography	530

## CHAPTER 8

	<i>Statistical Methods</i>	531
8.1	Introduction: The Use of Statistical Methods	531
8.2	Definitions and Notation	532
8.3	Laws of Probability	533
8.4	Permutations and Combinations	533
8.5	Population Statistics	533
8.6	Sample Statistics	542
8.7	Moment-Generating Functions	542
8.8	The Binomial Distribution	543
8.9	The Multinomial Distribution	543
8.10	The Poisson Distribution	543
8.11	The Normal Distribution	552
8.12	Derivation of the Normal Distribution Frequency Function	553
8.13	The $\chi^2$ Distribution	559
8.14	$\chi^2$ as a Measure of Goodness-of-Fit	560
8.15	Contingency Tables	561

8.16	The Sample Variance	568
8.17	Student's $t$ Distribution	568
8.18	The $F$ Distribution	570
8.19	Linear Regression and Method of Least Squares	571
8.20	Multiple and Polynomial Regression	573
8.21	Alternative Formulation of Regression Equations	574
8.22	Regression in Terms of Orthogonal Polynomials	574
8.23	Introduction to the Analysis of Variance	585
	<i>Problems</i>	587
	Bibliography	592
 <b>APPENDIX</b>		593
	Presentation of Computer Examples	593
	Flow-Diagram Convention	594
 <b>INDEX</b>		597
