List of Tables	xxxi
List of Special Symbols	xxxiii
1. Introduction and Survey of Results	1
1. Definition of the Empirical Process and the Inverse Transformation, 1	
2. Survey of Results for $\ \mathbb{U}_n\ $, 10	
3. Results for the Random Functions \mathbb{G}_n and \mathbb{U}_n on $[0, 1]$, 13	
4. Convergence of \mathbb{U}_n in Other Metrics, 17	
5. Survey of Other Results, 19	
2. Foundations, Special Spaces and Special Processes	23
0. Introduction, 23	
1. Random Elements, Processes, and Special Spaces, 24	
<i>Projection mapping; Finite-dimensional subsets; Measurable function space; Random elements; Equivalent processes; Change of variable theorem; Borel and ball σ-fields</i>	
2. Brownian Motions \mathbb{S} , Brownian Bridge \mathbb{U} , the Uhlenbeck Process, the Kiefer Process \mathbb{K} , the Brillinger Process, 29	
<i>Definitions; Relationships between the various processes; Boundary crossing probabilities for \mathbb{S} and \mathbb{U}; Reflection principles; Integrals of normal processes</i>	
3. Weak Convergence \Rightarrow , 43	
<i>Definitions of weak convergence and weak compactness; weak convergence criteria on (D, \mathcal{D}); Weak convergence criteria on more general spaces; The Skorokhod–Dudley–Wichura theorem; Weak convergence of functionals; The key equivalence; $\ \cdot/q\$ convergence; On verifying the hypotheses of Theorem 1; the fluctuation inequality; additional weak convergence criteria on (D, \mathcal{D}); Conditions for a process to exist on (C, \mathcal{C})</i>	

4. Weak Convergence of the Partial-Sum Process \mathbb{S}_n , 52
Definition of \mathbb{S}_n ; Donsker's theorem that $\mathbb{S}_n \Rightarrow \mathbb{S}$; The Skorokhod construction form of Donsker's theorem; O'Reilly's theorem; Skorokhod's embedded partial sum process; Hungarian construction of the partial sum process; the partial sum process of the future observations
 5. The Skorokhod Embedding of Partial Sums, 56
The strong Markov property; Gambler's ruin problem; Choosing τ so that $\mathbb{S}(\tau) \cong X$; The embedding version of \mathbb{S}_n ; Strassen's theorem on rates of embedding; Extensions and limitations; Breiman's embedding in which \mathbb{S} is fixed
 6. Wasserstein Distance, 62
Definition of Wasserstein distance d_2 ; Mallow's theorem; Minimizing the distance between rv's with given marginals; Variations
 7. The Hungarian Construction of Partial Sums, 66
The result; Limitations; Best possible rates; Other rates
 8. Relative Compactness \rightsquigarrow , 69
Definition of \rightsquigarrow ; LIL for iid $N(0, 1)$ rv's; LIL for Brownian motion; Hartman-Wintner LIL and converse; Multivariate LIL in \rightsquigarrow form; T_m approximation and T_m linearization; Criteria for establishing \rightsquigarrow ; \rightsquigarrow mapping theorem
 9. Relative Compactness of $\mathbb{S}(nI)/\sqrt{nb_n}$, 79
Definition of Strassen's limit class \mathcal{H} ; Properties of \mathcal{H} ; Strassen's theorem that $\mathbb{S}(nI)/\sqrt{nb_n} \rightsquigarrow \mathcal{H}$; Definition of Finkelstein's limit class \mathcal{K} ; $\mathbb{B}(n, \cdot) \rightsquigarrow$ for the Brillinger process \mathbb{B}
 10. Weak Convergence of the Maximum of Normalized Brownian Motion and Partial Sums, 82
Extreme value df 's; Darling and Erdős theorem with generalizations
 11. The LLN for iid rv's, 83
Kolmogorov's SLLN; Feller's theorem; Theorems of Erdős, Hsu and Robbins, and Katz; Necessary and sufficient conditions for the WLLN
- 3. Convergence and Distributions of Empirical Processes 85**
1. Uniform Processes and Their Special Construction, 85
Uniform empirical df \mathbb{G}_n , empirical process \mathbb{U}_{n_2} and quantile process \mathbb{V}_n ; Smoothed versions $\tilde{\mathbb{G}}_n$, $\tilde{\mathbb{U}}_n$, and $\tilde{\mathbb{V}}_n$; Identities;

Weighted uniform empirical process \mathbb{W}_n ; Covariances, $\rightarrow_{f.d.}$, and correlation $\rho_n \equiv \rho_n(c, 1)$; Finite sampling process (or empirical rank process) \mathbb{R}_n , with identities; \mathcal{L}_2 ; $\|[\cdot]\|$, $\langle \cdot, \cdot \rangle$, and $BVI(0, 1)$; Applications: Kolmogorov–Smirnov, Cramér–von Mises, stochastic integrals, and simple linear rank statistics; The special construction of $\mathbb{U}_n, \mathbb{V}_n, \mathbb{W}_n, \mathbb{R}_n$ and Brownian bridges \mathbb{U}, \mathbb{W} ; The special construction of $\int_0^1 h d\mathbb{W}_n =_a \int_0^1 h d\mathbb{W}$; Glivenko–Cantelli theorem in the uniform case; Generalizations to $\mathbb{U}_n(A)$; Uniform order statistics: the key relation, densities, moments

2. Definition of Some Basic Processes under General Alternatives, 98

The empirical df \mathbb{F}_n , the average df $\overline{\mathbb{F}_n}$, and empirical process $\sqrt{n}(\mathbb{F}_n - \overline{\mathbb{F}_n})$; The quantile process; Reduction to $[0, 1]$ in the case of continuous df's; $\mathbb{X}_n, \mathbb{Y}_n, \mathbb{Z}_n, \mathbb{R}_n$, and identities; Reduction to $[0, 1]$ in the general case: associated array of continuous rv's; Extended Glivenko–Cantelli theorem; Some change of variable results

3. Weak Convergence of the General Weighted Empirical Process, 108

Definition and moments; The function v_n ; Weak convergence (\Rightarrow) of \mathbb{Z}_n and its modulus of continuity; The special construction of \mathbb{Z}_n ; Moment inequalities for \mathbb{Z}_n

4. The Special Construction for a Fixed Nearly Null Array, 119

Notation for the reduced processes \mathbb{X}_n and \mathbb{Z}_n ; Nearly null arrays; The special construction of \mathbb{Z}_n ; Nearly null arrays; The special construction of \mathbb{Z}_n ; The special construction for $\int_0^1 h d\mathbb{Z}_n$

5. The Sequential Uniform Empirical Process \mathbb{K}_n , 131

The definition of \mathbb{K}_n and the Kiefer process \mathbb{K} ; The Bickel–Wichura theorem that $\mathbb{K}_n \Rightarrow \mathbb{K}$

6. Martingales Associated with $\mathbb{U}_n, \mathbb{V}_n, \mathbb{W}_n, \mathbb{R}_n$, 132

Martingales for $\mathbb{U}_n, \mathbb{V}_n, \mathbb{W}_n, \mathbb{R}_n$ divided by $1 - I$; The Pyke–Shorack inequality, with analogs; Reverse martingales for $\mathbb{U}_n, \mathbb{V}_n, \mathbb{W}_n, \mathbb{R}_n$ divided by I ; Submartingales for $\|n(\mathbb{G}_n - I)^{\#}\psi\|$; Reverse submartingales for $\|(\mathbb{G}_n - I)^{\#}\psi\|$; Sen's inequality; Vanderzanden's martingales

7. A Simple Result on Convergence in $\|\cdot/q\|$ Metrics, 140

8. Limiting Distributions under the Null Hypothesis, 142

Kolmogorov–Smirnov and Kuiper statistics; Renyi's statistics; Cramér–von Mises, Watson, Anderson–Darling statistics

4. Alternatives and Processes of Residuals

151

0. Introduction, 151

1. Contiguity, 152

The key contiguity condition; Convergence of the centering function; Convergence of the weighted empirical process \mathbb{E}_n on $(-\infty, \infty)$ and the empirical rank process \mathbb{R}_n ; Le Cam's representation of the log likelihood ratio L_n under contiguity; Uniform integrability, \rightarrow_{L_1} and \rightarrow_p of the rv's $\exp(L_n)$; Le Cam's third lemma; The Radon-Nikodym derivative of $\mathbb{U} + \Delta$ measure wrt \mathbb{U} measure; miscellaneous contiguity results

2. Limiting Distributions under Local Alternatives, 167

Chibisov's theorem; An expansion of the asymptotic power of the $\|(\mathbb{G}_n - I)^+\|$ test

3. Asymptotic Optimality of \mathbb{F}_n , 171

Beran's theorem on the asymptotic optimality of \mathbb{F}_n ; Statement of other optimality results

4. Limiting Distributions under Fixed Alternatives, 177

Raghavachari's theorem for supremum functionals; Analogous result for integral functionals

5. Convergence of Empirical and Rank Processes under Contiguous Location, Scale, and Regression Alternatives, 181

Fisher information for location and scale; The contiguous simple regression model, and its associated special construction; The contiguous linear model with known scale; The contiguous scale model; The contiguous linear model with unknown scale; the main result

6. Empirical and Rank Processes of Residuals, 194

The weighted empirical process of standardized residuals $\tilde{\mathbb{E}}_n$; The empirical rank process of standardized residuals $\tilde{\mathbb{R}}_n$; Convergence of $\tilde{\mathbb{E}}_n$ and $\tilde{\mathbb{R}}_n$; Classical and robust residuals, the Pierce and Kopecky idea; The estimated empirical process $\hat{\mathbb{U}}_n$; Testing the adequacy of a model

5. Integral Tests of Fit and Estimated Empirical Process

201

0. Introduction, 201

1. Motivation of Principal Component Decomposition, 203

Statement of a problem; Principal component decomposition of a random vector; Principal component decomposition of a process—heuristic treatment

2. Orthogonal Decomposition of Processes, 206
Properties of kernels; Complete orthonormal basis for \mathcal{L}_2 ; Mercer's theorem; Representations of covariance functions via Mercer's theorem; Orthogonal decomposition of \times a la Kac and Siegert; Distribution of $\int \mathbb{X}^2$ via decomposition
 3. Principal Component Decomposition of \mathbb{U}_n , \mathbb{U} and Other Related Processes, 213
Kac and Siegert decomposition of \mathbb{U} ; Durbin and Knott decomposition of \mathbb{U}_n ; Decompositions of W_n^2 and W^2 ; Distribution of the components of \mathbb{U}_n ; Computing formula for W_n^2 ; Testing natural Fourier parameters; Power of W_n^2 , A_n^2 , and other tests; Decomposition of $\psi\mathbb{U}$ for ψ continuous on $[0, 1]$
 4. Principal Component Decomposition of the Anderson and Darling Statistic A_n^2 , 224
Limiting distribution of A_n^2 ; Anderson and Darling decomposition of Z and A ; Computing formula for A_n^2
 5. Tests of Fit with Parameters Estimated, 228
Darling's theorem; An estimated empirical process $\hat{\mathbb{U}}_n$; Specialization to efficient estimates of location and scale
 6. The Distribution of \hat{W}^2 , \hat{W}_n^2 , \hat{A}^2 , \hat{A}_n^2 , and Other Related Statistics, 235
The Darling-Sukhatme theorem for $\hat{K}(s, t) = K(s, t) - \sum_1^m \varphi_i(s)\varphi_i(t)$; Tables of distributions; Normal, exponential, extreme value and censored exponential cases; Normalized principal components of \hat{W}_n^2 ; A proof for $\hat{\Sigma} = \Sigma - \varphi\varphi'$
 7. Confidence Bands, Acceptance Bands, and QQ, PP, and SP Plots, 247
 8. More on Components, 250
Asymptotic efficiency of tests based on components; Choosing the best components; We come full circle
 9. The Minimum Cramér-von Mises Estimate of Location, 254
The Blackman estimator of location
- 6. Martingale Methods** 258
0. Introduction, 258
 1. The Basic Martingale \mathbb{M}_n for \mathbb{U}_n , 264
The cumulative hazard function Λ ; Definition of the basic martingale \mathbb{M}_n ; The key identity; The variance function V ; Convergence of \mathbb{M}_n to $\mathbb{M} = \mathbb{S}(V)$ for a Brownian motion \mathbb{S} ;

$\mathbb{M} = \mathbb{Z}(F)$ for continuous F and a particular Brownian motion \mathbb{Z} ; The predictable variation process $\langle \mathbb{M}_n \rangle$; Discussion of Rebellodo's CLT; The exponential identity for $\sqrt{n}(\mathbb{F}_n - F)$; Extension to the weighted case of \mathbb{W}_n

2. Processes of the Form $\psi \mathbb{M}_n$, $\psi \mathbb{U}_n(F)$, and $\psi \mathbb{W}_n(F)$, 273
Convergence in $\|\cdot\|$ metrics; F^{-1} and F_+^{-1} are q -functions
3. Processes of the Form $\int_{-\infty}^{\cdot} h d\mathbb{M}_n$, 276
 $\mathbb{K}_n \equiv \int_{-\infty}^{\cdot} h d\mathbb{M}_n$ is a martingale; Evaluation of the predictable variation of \mathbb{K}_n ; Existence of $\mathbb{K} \equiv \int_{-\infty}^{\cdot} h d\mathbb{M}$; Convergence of \mathbb{K}_n to \mathbb{K} in $\|\cdot\|$ metrics
4. Processes of the Form $\int_{-\infty}^{\cdot} h d\mathbb{U}_n(F)$ and $\int_{-\infty}^{\cdot} h d\mathbb{W}_n(F)$, 282
Reduction of $\int_{-\infty}^x h d\mathbb{W}_n(F)$ to the form $\int_{-\infty}^x h_x^ d\mathbb{M}_n$; Existence of $\int_{-\infty}^{\cdot} h d\mathbb{U}(F)$ and $\int_{-\infty}^{\cdot} h d\mathbb{W}(F)$; Convergence in $\|\cdot\|$ metrics; Some covariance relationships among the processes; Replacing h by h_n*
5. Processes of the Form $\int_{-\infty}^{\cdot} \mathbb{M}_n dh$, $\int_{-\infty}^{\cdot} \mathbb{U}_n(F) dh$, and $\int_{-\infty}^{\cdot} \mathbb{W}_n(F) dh$, 289
Convergence of these processes in $\|\cdot\|$ metrics
6. Reductions When F is Uniform, 291

7. Censored Data and the Product-Limit Estimator

0. Introduction, 293

The random censorship model; The product limit estimator $\hat{\mathbb{F}}_n$; The cumulative hazard function Λ and its estimator $\hat{\Lambda}_n$; The processes $\mathbb{B}_n \equiv \sqrt{n}(\hat{\Lambda}_n - \Lambda)$ and $\mathbb{X}_n \equiv \sqrt{n}(\hat{\mathbb{F}}_n - F)$; The basic martingale \mathbb{M}_n

1. Convergence of the Basic Martingale \mathbb{M}_n , 296
The covariance function V ; Convergence of \mathbb{M}_n to $\mathbb{M} \equiv S(V)$
2. Identities Based on Integration by Parts, 300
Representation of \mathbb{B}_n and $\mathbb{X}_n/(1-F)$ as integrals $\int_0^{\cdot} d\mathbb{M}_n$; The exponential formula
3. Consistency of $\hat{\Lambda}_n$ and $\hat{\mathbb{F}}_n$, 304
4. Preliminary Weak Convergence \Rightarrow of \mathbb{B}_n and \mathbb{X}_n , 306
The Breslow-Crowley theorem
5. Martingale Representations, 310
The predictable variation $\langle \mathbb{M}_n \rangle$ of the basic martingale \mathbb{M}_n ; The predictable variation of \mathbb{B}_n and $\mathbb{X}_n/(1-F)$

6. Inequalities, 316
The Gill–Wellner inequality; Lenglar’s inequality for locally square integrable martingales; Gill’s inequality (product-limit version of Daniels and Chang inequalities)
7. Weak Convergence \Rightarrow of \mathbb{B}_n and \mathbb{X}_n in $\|\cdot\|_0^T$ -Metrics, 318
Application of Rebolledo’s CLT and Lenglar’s inequality; Confidence bands
8. Extension to General Censoring Times, 325
Convergence of \mathbb{B}_n and \mathbb{X}_n ; The product-limit estimator is the MLE
- 8. Poisson and Exponential Representations 334**
0. Introduction, 334
1. The Poisson Process \mathbb{N} , 334
One-dimensional; Two-dimensional
2. Representations of Uniform Order Statistics, 335
As partial sums of exponentials; As waiting times of a conditioned Poisson process; Normalized exponential spacings; Lack of memory property
3. Representations of Uniform Quantile Processes, 337
4. Poisson Representations of \mathbb{U}_n , 338
Conditional, Chibisov, and Kac representations
5. Poisson Embeddings, 340
The Poisson bridge; Representation of the sequential uniform empirical process
- 9. Some Exact Distributions 343**
0. Introduction, 343
1. Evaluating the Probability that \mathbb{G}_n Crosses a General Line, 344
Dempster’s formula; Daniels’ theorem; Chang’s theorem
2. The Exact Distribution of $\|\mathbb{U}_n^\pm\|$ and the DKW Inequality, 349
The Birnbaum and Tingey formula; Asymptotic expansions; Harter’s approximation; Pyke’s result for the smoothed empirical df $\tilde{\mathbb{G}}_n$; The Dvoretzky–Kiefer–Wolfowitz (DKW) inequality

3. Recursions for $P(g \leq \mathbb{G}_n \leq h)$, 357
Recursions of Noe, Bolshev, and Steck; Steck's formula; Ruben's recursive approach; The exact distribution of $\|\mathbb{U}_n\|$ using Ruben's table; Tables for $\|\mathbb{U}_n^+/\sqrt{I(1-I)}\|$ and $\|\mathbb{U}_n^+/\sqrt{\mathbb{G}_n(1-\mathbb{G}_n)}\|$ from Kotelnikova and Chmaladze
4. Some Combinatorial Lemmas, 376
Andersens's lemma; Takács' lemma; Tusnády's lemma; Another proof of Dempster's formula; Csáki and Tusnády's lemma
5. The Number of Intersections of \mathbb{G}_n with a General Line, 380
The exact distribution of the number of intersections; Limiting distributions in various special cases
6. On the Location of the Maximum of \mathbb{U}_n^+ and $\tilde{\mathbb{U}}_n^+$, 384
The smoothed uniform empirical and quantile processes; Theorems of Birnbaum and Pyke, Gnedenko and Mihalevic, Kac, and Wellner
7. Dwass's Approach to \mathbb{G}_n Based on Poisson Processes, 388
Dwass's approach to \mathbb{G}_n based on Poisson processes; Dwass's theorem with applications; Zeros and ladder points of \mathbb{U}_n ; Crossings on a grid
8. Local Time of \mathbb{U}_n , 398
Definition of local time; The key representation; Some open questions about the limit
9. The Two-Sample Problem, 401
The Gnedenko and Korolyuk distribution; Application to the limiting distribution of $\|\mathbb{U}_n^\# \|$
10. **Linear and Nearly Linear Bounds on the Empirical Distribution Function \mathbb{G}_n** 404
 0. Summary, 404
 1. Almost Sure Behavior of $\xi_{n:k}$ with k Fixed, 407
Kiefer's characterization of $P(\xi_{n:k} \leq a_n \text{ i.o.})$; Robbins-Siegmund characterization of $P(\xi_{n:k} > a_n \text{ i.o.})$
 2. A Glivenko-Cantelli-type Theorem for $\|(\mathbb{G}_n - I)\psi\|$, 410
Lai's SLLN for $\|(\mathbb{G}_n - I)\psi\|$
 3. Inequalities for the Distributions of $\|\mathbb{G}_n/I\|$ and $\|I/\mathbb{G}_n\|_{\xi_{n,1}}^1$, 412
Shorack and Wellner bound on $P(\|I/\mathbb{G}_n\|_{\xi_{n,1}}^1 \geq \lambda)$; Wellner's exponential bounds

4. In-Probability Linear Bounds on \mathbb{G}_n , 418
 5. Characterization of Upper-Class Sequences for $\|\mathbb{G}_n/I\|$ and $\|I/\mathbb{G}_n\|_{\xi_{n,1}}^1$, 420
Shorack and Wellner's characterization of upper class sequences for $\|\mathbb{G}_n/I\|$ and $\|I/\mathbb{G}_n\|_{\xi_{n,1}}^1$; Chang's WLLN type result for $\|\cdot\|_{a_n}^{1-a_n}$; Wellner's restriction to $\|\cdot\|_{a_n}^1$ with $a_n \rightarrow 0$; Mason's upper class sequences for $\|n^\nu(\mathbb{G}_n - I)/[I(1 - I)]^{1-\nu}\|$ with $0 \leq \nu \leq \frac{1}{2}$
 6. Almost Sure Nearly Linear Bounds on \mathbb{G}_n and \mathbb{G}_n^{-1} , 426
Bounding \mathbb{G}_n and \mathbb{G}_n^{-1} between $(1 \pm \varepsilon)t^{1 \pm \delta}$; James' boundary weight $\psi \equiv I/(\log_2(e^e/I))$ for $\|\psi/\mathbb{G}_n\|_{\xi_{n,1}}^1$; Nearly linear bounds with logarithmic terms
 7. Bounds on Functions of Order Statistics, 428
Mason's upper class result for $\max\{ig(\xi_{n,i})/na_n: 1 \leq i \leq k_n\}$ with $g \searrow$ and $a_n \nearrow$; Strength of bundles of fibers; Determination of the a.s. \limsup of $\|\mathbb{G}_n g\|/a_n$ via $Eg(\xi)$
 8. Almost Sure Behavior of $Z_n(a_n)/b_n$ as $a_n \downarrow 0$, 432
Kiefer's theorem
 9. Almost Sure Behavior of Normalized Quantiles as $a_n \downarrow 0$, 435
- 11. Exponential Inequalities and $\|\cdot/q\|$ -Metric Convergence of \mathbb{U}_n and \mathbb{V}_n** 438
0. Introduction, 438
 1. Universal Exponential Bounds for Binomial rv's, 439
The exponential bounds for Binomial tail probabilities of Bennett, Bernstein, Hoeffding, and Wellner, Behavior of the functions ψ and h ; Constants β_c^\pm related to ψ and h ; Extensions of the binomial exponential bounds to suprema of \mathbb{U}_n over neighborhoods of zero
 2. Bounds on the Magnitude of $\|\mathbb{U}_n^\# / q\|_a^b$, 445
Inequalities for $P(\|\mathbb{U}_n^\# / q\|_a^b \geq \lambda)$; Corollary for $q = \sqrt{t}$; Corresponding inequalities for $P(\|\mathbb{U} / q\|_a^b \geq \lambda)$
 3. Exponential Bounds for Uniform Order Statistics, 453
Exponential bounds for order statistic tail probabilities; Behavior of the functions $\tilde{\psi}$ and \tilde{h} ; Bounds for absolute central moments of uniform order statistics; Extensions of the bounds to suprema of \mathbb{V}_n over neighborhoods of 0
 4. Bounds for the Magnitude of $\|\mathbb{V}_n^\# / q\|_a^b$, 460
Inequalities for $P(\|\mathbb{V}_n^\# / q\|_a^b \geq \lambda)$; Corollary for $q = \sqrt{t}$

5. Weak Convergence of \mathbb{U}_n and \mathbb{V}_n in $\|\cdot/q\|$ Metrics, 461
Chibisov's theorem; O'Reilly's theorem on convergence of \mathbb{V}_n with respect to $\|\cdot/q\|$; Other versions of the quantile process
6. Convergence of \mathbb{U}_n , \mathbb{W}_n , $\tilde{\mathbb{V}}_n$ and \mathbb{R}_n in Weighted \mathcal{L} , Metrics, 470
7. Moments of Functions of Order Statistics, 474
Existence of moments of rv's; Existence of moments of order statistics; Anderson's moment expansions; Mason's bounds on moments
8. Additional Binomial Results, 480
Unimodality of the binomial distribution and related inequalities; Feller's inequalities; Large deviations, the Bahadur and Rao theorem
9. Exponential Bounds for Poisson, Gamma, and Beta RV's, 484
Unimodality of the Poisson distribution; Large deviations; Exponential bounds for Poisson probabilities related to the Binomial bounds; Inequalities of Bohman and of Anderson and Samuels; Analogous results for the Gamma distribution
- 12. The Hungarian Constructions of \mathbb{K}_n , \mathbb{U}_n and \mathbb{V}_n 491**
0. Introduction, 491
Skorokhod constructions of \mathbb{U}_n and \mathbb{V}_n again; The sequential uniform empirical process \mathbb{K}_n
1. The Hungarian Construction of \mathbb{K}_n , 493
The Hungarian construction of \mathbb{K}_n at rate $(\log n)^2/\sqrt{n}$; The other Hungarian construction of \mathbb{U}_n at rate $(\log n)/\sqrt{n}$
2. The Hungarian Renewal Construction of $\tilde{\mathbb{V}}_n$, 496
The Brillinger process; The Hungarian renewal construction of $\tilde{\mathbb{V}}_n$ using partial sums of exponentials
3. A Refined Construction of \mathbb{U}_n and \mathbb{V}_n , 499
4. Rate of Convergence of the Distribution of Functionals, 502
Rate $(\log n)/\sqrt{n}$ is possible for Lipschitz functionals with bounded density
- 13. Laws of the Iterated Logarithm Associated with \mathbb{U}_n and \mathbb{V}_n 504**
0. Introduction, 504
1. A LIL for $\|\mathbb{U}_n\|$, 504

Smirnov's LIL for $\|\mathbb{U}_n^\# \|$; Chung's characterization of upper class sequences; Boundary crossing probabilities; A remark on an Erdős theorem

2. A Maximal Inequality for $\|\mathbb{U}_n^\pm / q\|_a^b$, 510
James' inequality for general q ; Shorack's refinement for $q = \sqrt{t}$
3. Relative Compactness \rightsquigarrow of \mathbb{U}_n and \mathbb{V}_n , 512
Definition of \rightsquigarrow ; Finkelstein's theorem that $\mathbb{U}_n / b_n \rightsquigarrow$; Cassels' theorem; Rescaled Kiefer process $\mathbb{K}(n, \cdot) / \sqrt{n} b_n \rightsquigarrow$; An alternative proof of Finkelstein's theorem based on the Hungarian construction
4. Relative Compactness of \mathbb{U}_n in $\| / q \|$ – Metrics, 517
James' theorem
5. The Other LIL for $\|\mathbb{U}_n\|$, 526
Mogulskii's theorem
6. Extension to General F , 530

14. Oscillations of the Empirical Process

531

0. Introduction, 531
1. The Oscillation Moduli ω , $\bar{\omega}$, and $\tilde{\omega}$ of \mathbb{U} and \mathbb{S} , 533
The modulus of continuity ω and Levy's theorem, The modulus $\bar{\omega}$; An exponential bound for $\omega(a)$; The Bickel and Freedman bound on $E\omega(a)$; The order of $\tilde{\omega}(a)$; An exponential bound for $\tilde{\omega}(a)$
2. The Oscillation Moduli of \mathbb{U}_n , 542
The modulus of continuity ω_n ; The Lipschitz $\frac{1}{2}$ modulus $\tilde{\omega}_n$; Stute's theorem on the order of $\omega_n(a_n)$ for "regular" a_n ; Behavior of $\omega_n(a_n)$ on the boundary sequences; The same theorems hold for $\bar{\omega}_n(a_n)$ and $\sqrt{a_n} \tilde{\omega}_n(a_n)$; The Mason, Wellner, Shorack exponential bound on ω_n ; The associated maximal inequality of Stute; The martingale $\sqrt{n} \omega_n(a)$, $n \geq 1$; A proof using the conditional Poisson representation
3. A Modulus of Continuity for the Kiefer Process \mathbb{K}_n , 558
The modulus of continuity ω_n of $\mathbb{B}_n \equiv \mathbb{K}(n, \cdot) / \sqrt{n}$; Behavior of $\omega_n(a_n)$ on the upper boundary sequences; A maximal inequality; The Lipschitz $\frac{1}{2}$ -modulus $\tilde{\omega}_n$ of \mathbb{B}_n
4. The Modulus of Continuity Again, via the Hungarian Construction, 567

A partial theorem for “regular” sequences a_n ; A full theorem for a_n on the upper boundary

5. Exponential Inequalities for Poisson Processes, 569
Inequalities for centered Poisson processes; The modulus of continuity of \mathbb{K}_s , \mathbb{M}_s , and \mathbb{N}_s ; Inequalities for the Poisson bridge; Another proof of Chibisov’s theorem; Convergence of rescaled \mathbb{G}_n to a Poisson process
 6. The Modulus of Continuity Again, via Poisson Embedding, 578
The centered Poisson process \mathbb{K}_s , the Poisson bridge \mathbb{M}_s , and the final \mathbb{N}_s ; Theorems of Section 2 reproved via Poisson embedding; Summary; A proof using Poisson embedding
 7. The Modulus of Continuity of \mathbb{V}_n , 581
- 15. The Uniform Empirical Difference Process $\mathbb{D}_n \equiv \mathbb{U}_n + \mathbb{V}_n$ 584**
0. Introduction, 584
 1. The Uniform Empirical Difference Process \mathbb{D}_n , 584
Definition of \mathbb{D}_n ; The key picture; Kiefer’s theorems; A simple proof establishing the correct order of magnitude; The order of \mathbb{D}_n/q
 2. The Integrated Empirical Difference Process, 594
Vervaat’s theorem; The parameters estimated version
- 16. The Normalized Uniform Empirical Process \mathbb{Z}_n and the Normalized Uniform Quantile Process 597**
0. Introduction, 597
 1. Weak Convergence of $\|\mathbb{Z}_n\|$, 597
Definition of \mathbb{Z}_n and its natural limit \mathbb{Z} ; Relationships between \mathbb{Z} , \mathbb{S} , and the Uhlenbeck process \mathbb{X} ; Darling and Erdős’ limit theorem for $\|\mathbb{S}/\sqrt{I}\|_0^1$; Jaeschke’s analogous limit theorem for $\|\mathbb{Z}_n\|$; Eicker’s theorem for the quantile version; Representation of $\int_0^1 \mathbb{Z}_n(t) dt$ as a sum of 0-mean iid rv’s
 2. The a.s. Rate of Divergence of $\|\mathbb{Z}_n^\pm\|_0^{1/2}$, 603
Csáki’s theorems; Shorack’s theorem
 3. Almost Sure Behavior of $\|\mathbb{Z}_n^\pm\|_{a_n}^{1/2}$ with $a_n \searrow 0$, 609
Csőrgő and Révész theorem; Proof of Singh’s theorem
 4. The a.s. Divergence of the Normalized Quantile Process 615

17. The Uniform Empirical Process Indexed by Intervals and Functions	621
0. Introduction, 621	
1. Bounds on the Magnitude of $\ \mathbb{U}_n/q\ _{\mathcal{G}(a,b)}$, 621	
2. Weak Convergence of \mathbb{U}_n in $\ \cdot/q\ _{\mathcal{G}}$ Metrics, 625	
3. Indexing by Continuous Functions via Chaining, 630	
18. The Standardized Quantile Process \mathbb{Q}_n	637
0. Introduction, 637	
<i>Summary; Recollection of earlier results for \mathbb{V}_n</i>	
1. Weak Convergence of the Standardized Quantile Process \mathbb{Q}_n , 638	
<i>Convergence in distribution of sample quantiles; The Hájek-Bickel theorem on weak convergence of \mathbb{Q}_n on $[a, b] \subset (0, 1)$; Shorack's theorem on $\ \cdot/q\$ convergence of \mathbb{Q}_n to \mathbb{V}; The Csörgő and Révész condition on f</i>	
2. Approximation of \mathbb{Q}_n by \mathbb{V}_n with Applications, 645	
<i>Csörgő and Révész determination of the rate at which $\ \mathbb{Q}_n - \mathbb{V}_n\$ goes to 0; Extension of Kiefer-Bahadur and Finkelstein theorems to \mathbb{Q}_n; Miscellaneous applications; Parzen's observation on the Csörgő and Révész condition on f; Mason's SLLN</i>	
3. Asymptotic Theory of the Q-Q Plot, 652	
<i>Limiting distribution of Doksum's process; Confidence bands for $\Delta \equiv G^{-1} \circ F - I$</i>	
4. Weak Convergence \Rightarrow of the Product - Limit Quantile Process \mathbb{Y}_n , 657	
19. L-Statistics	660
0. Introduction, 660	
1. Statement of the Theorems, 660	
<i>Basic idea of the proof; The assumptions; CLT, LIL, SLLN; Functional CLT and LIL for past and future; Simplifying the mean; Better rates of embedding for a specific score function</i>	
2. Some Examples of L-statistics, 670	
<i>Mean, median, and sign test; The likelihood ratio statistic; Pitman efficiency; Nonstandard examples</i>	

3.	Randomly Trimmed and Winsorized Means, 678	
	<i>Ordinary trimmed and Winsorized means; The metrically symmetrized and Winsorized mean; Other examples</i>	
4.	Proofs, 688	
20.	Rank Statistics	695
0.	Linear Rank Statistics, 695	
1.	The Basic Martingale M_n , 695	
	<i>Definition of M_n; Convergence of M_n</i>	
2.	Processes of the Form $T_n = \int_0^1 h_n dR_n$ in the Null Case, 699	
	<i>Definition of T_n; Convergence of T_n</i>	
3.	Contiguous Alternatives, 704	
	<i>Efficiency, asymptotic linearity, and rank estimators</i>	
4.	The Chernoff and Savage Theorem, 715	
5.	Some Exercises for Order Statistics and Spacings, 717	
21.	Spacings	720
0.	Introduction, 720	
1.	Definitions and Distributions of Uniform Spacings, 720	
2.	Limiting Distributions of Ordered Uniform Spacings, 725	
3.	Renewal Spacings Processes, 727	
	<i>Normalized, ordered, and weighted renewal spacings processes; Convergence to limiting processes</i>	
4.	Uniform Spacings Processes, 731	
	<i>Normalized, ordered, and weighted uniform spacings processes; Convergence in $\ \cdot/q\$ metrics</i>	
5.	Testing Uniformity with Functions of Spacings, 733	
	<i>Testing an iid sample; Testing a renewal process for exponentiality; Testing for exponentiality</i>	
6.	Iterated Logarithms for Spacings, 741	
22.	Symmetry	743
1.	The Empirical Symmetry Process S_n and the Empirical Rank Symmetry Process R_n , 743	
	<i>Definitions of the absolute empirical process, the empirical symmetry process S_n, and the empirical rank symmetry pro-</i>	

- cess \mathbb{R}_n ; *Identities relating these processes to U_n ; Convergence theorems*
2. Testing Goodness of Fit for a Symmetric DF, 746
The symmetric estimator F_n^ of F satisfies $\sqrt{n}\|(F_n^* - F)^\# \| \equiv \|U_n^\#\|/2$; *Supremum, integral, and components tests**
 3. The Processes under Contiguity, 751
 4. Signed Rank Statistics under Symmetry, 753
Asymptotic normality; Representation of the limiting rv; Asymptotic normality under contiguous alternatives
 5. Estimating an Unknown Point of Symmetry, 757
Estimators based on signed rank statistics; Estimators based on variants of the Cramér-von Mises statistic
 6. Estimating the DF of a Symmetric Distribution with Unknown Point of Symmetry, 759
Schuster's results; Boos' statistic
- 23. Further Applications** 763
1. Bootstrapping the Empirical Process, 763
 2. Smooth Estimates of F , 764
 3. The Shorth, 767
 4. Convergence of U -Statistic Empirical Processes, 771
 5. Reliability and Econometric Functions, 775
- 24. Large Deviations** 781
0. Introduction, 781
 1. Bahadur Efficiency, 781
Exact slope; Bahadur's theorem
 2. Large Deviations for Supremum Tests of Fit, 783
Large deviations of binomial rv's; The key function $\psi_2(t) = -\log(t(1-t))$; A version of Abrahamson's theorem
 3. The Kullback-Leibler Information Number, 789
Elementary properties
 4. The Sanov Problem, 792
Sanov's conclusion; Hoadley's theorem; The Groeneboom, Oosteroff, and Ruymgaart extension; Reformulation of Section 2 in the spirit of Sanov's conclusion

- 25. Independent but not Identically Distributed Random Variables** 796
0. Introduction, 796
 1. Extensions of the DKW Inequality, 796
Bretagnolle's inequality and exponential bound
 2. The Generalized Binomial Distribution, 804
Hoeffding's inequalities for the probability distribution of a sum of independent Bernoulli rv's; Feller's variance inequality
 3. Bounds on F_n , 807
Van Zuijlen's inequalities for $P(\|F_n/\overline{F}_n\| \geq \lambda)$ and $P(\|\overline{F}_n/F_n\|_{X_{n:1}}^\infty \geq \lambda)$
 4. Convergence of X_n , Y_n , and Z_n with respect to $\|\cdot/q\|$ Metrics, 809
 \Rightarrow of Z_n in $\|\cdot/q\|$ -metrics; \Rightarrow of X_n and Y_n in $\|\cdot/q\|$; Comparison inequalities; Another natural reduction of the empirical process; An inequality of Marcus and Zinn; The Marcus-Zinn exponential bound for the weighted empirical process Z_n
 5. More on L -statistics, 821
The CLT for L -statistics of independent but not identically distributed rv's; Stigler's variance comparisons
- 26. Empirical Measures and Processes for General Spaces** 826
0. Introduction, 826
 1. Glivenko-Cantelli Theorems via the Vapnik-Červonenkis Idea, 827
Vapnik-Červonenkis classes of sets; The Vapnik-Červonenkis exponential bound; Bounds on the growth function $m_{\mathcal{G}}(r)$; Examples of VC classes of sets; Equivalence of $\rightarrow_{a.s.}$ and \rightarrow_p for $D_n(\mathcal{C})$
 2. Glivenko-Cantelli Theorems via Metric Entropy, 835
Entropy conditions; Pollard's entropy bound for functions; The Blum-DeHardt Glivenko-Cantelli theorem; The Pollard-Dudley Glivenko-Cantelli theorem
 3. Weak and Strong Approximations to the Empirical Process Z_n , 837
The Gaussian limit process; Functional Donsker and strong-invariance classes of functions; A general theorem of Dudley and Philipp; Dudley's CLT; Pollard's CLT

A. Appendix A: Inequalities and Miscellaneous

0. Introduction, 842
1. Simple Moment Inequalities, 842
Basic, Markov, Chebyshev, Jensen, Liapunov, C_r , Cauchy-Schwarz, Minkowski, estimating $E|X|$
2. Maximal Inequalities for Sums and a Minimal Inequality, 843
Kolmogorov, Monotone, Hájek-Rényi, Levy, Skorokhod, Menchhoff; Maximal inequality for the Poisson process; Weak symmetrization, Levy; Mogulskii's minimal inequality; The continuous monotone inequality of Gill-Wellner
3. Berry-Esseen Inequalities, 848
Berry-Esseen, with generalizations; Crámer's expansion; Esseen's lemma; Stein's CLT, a special case
4. Exponential Inequalities and Large Deviations, 850
Mill's ratio for normal rv 's; Variations on $P(S_n/s_n > \lambda) = \exp(-\lambda^2/2)$; Bennett, Hoeffding, and Bernstein inequalities; Kolmogorov's exponential bounds; Large deviation theorems of Chernoff and others; The Poisson example; Properties of moment-generating functions
5. Moments of Sums, 857
von Bahr inequality; r th mean convergence equivalence; Burkholder's inequality; Marcinkiewicz and Zygmund equivalences, with variations; Hornich's inequality
6. Borel-Cantelli Lemmas, 859
Borel-Cantelli, Rényi, and other variations
7. Miscellaneous Inequalities, 860
Events lemma, Bonferoni inequality; Anderson's inequality
8. Miscellaneous Probabilistic Results, 862
Moment convergence; \rightarrow_p is equivalent to $\rightarrow_{a.s.}$ on subsequences; Cramér-Wold device; Formulas for means and covariances; Tail behavior of F when moments exist; Vitali's theorem; Scheffé's theorem with applications
9. Miscellaneous Deterministic Results, 864
Stirling's formula; Euler's constant; Some implications of convergence of series and integrals; A discussion of the subsequence $n_j \equiv \langle \exp(\alpha_j/\log j) \rangle$ used in upper class proofs; Integration by parts

10. Martingale Inequalities, 869	
	<i>Functions of martingales; Doob's inequality with variations; The Birnbaum–Marshall inequalities; Submartingale convergence theorem</i>
11. Inequalities for Reversed Martingales, 874	
	<i>Inequalities; Reverse submartingale convergence theorem</i>
12. Inequalities in Higher Dimensions, 876	
	<i>Wichura's inequality; The Shorack and Smythe inequality</i>
13. Finite-Sampling Inequalities, 878	
	<i>Hoeffding's bound</i>
14. Inequalities for Processes, 878	
B. Appendix B: Martingales and Counting Processes	884
1. Basic Terminology and Definitions, 884	
2. Counting Processes and Martingales, 886	
	<i>Examples; Compensators; Doob–Meyer decomposition for a counting process $N = M + A$; The predictable variation process $\langle M \rangle = \int_{(0,1]} (1 - \Delta A) dA$; Formulas for the compensator A; Continuity of A and quasi-left-continuity of N</i>
3. Stochastic Integrals for Counting Processes, 890	
	<i>Martingale transform theorems; The predictable variation process of a martingale transform; Martingale representation theorem</i>
4. Martingale Inequalities, 892	
	<i>Lenglart's inequality; Burkholder–Davis–Gundy inequality</i>
5. Rebolledo's Martingale Central Limit Theorem, 894	
	<i>The ARJ conditions; Relationships among the ARJ conditions; A central limit theorem for local martingales; A central limit theorem for locally square integrable martingales</i>
6. A Change of Variable Formula and Exponential Semimartingales, 896	
	<i>The Ito, Doleans–Dade, Meyer formula; The exponential of a semimartingale; Examples; A useful exponential supermartingale</i>
