Preface	v
CHAPTER 1	
Introduction	1
1.1 The Subject of Variance Estimation	1
1.2 The Scope and Organization of this Book	5
1.3 Notation and Basic Definitions	7
1.4 Standard Sampling Designs and Estimators	11
1.5 Linear Estimators	16
CHAPTER 2	
The Method of Random Groups	19
2.1 Introduction	19
2.2 The Case of Independent Random Groups	20
2.3 Example: A Survey of AAA Motels	26
2.4 The Case of Nonindependent Random Groups	30
2.5 The Collapsed Stratum Estimator	47
2.6 Stability of Random Group Estimator of Variance	55
2.7 Estimation Based on Order Statistics	72
2.8 Deviations from Strict Principles	83
2.9 On the Condition $\hat{\theta} = \hat{\theta}$ for Linear Estimators	85
2.10 Example: The Retail Trade Survey	88
2.11 Example : The 1972-73 Consumer Expenditure Survey	94
2.12 Example: The 1972 Commodity Transportation Survey	104
CHAPTER 3	
Variance Estimation Based on Balanced Half-Samples	110
3.1 Introduction	110
3.2 Description of Basic Techniques	111

3.3	Usage with Multistage Designs	116
3.4	Usage with Nonlinear Estimators	118
3.5	Without Replacement Sampling	121
3.6	Partial Balancing	125
3.7	Extensions of Half-Sample Replication to the Case $n_h \neq 2$	130
3.8	Miscellaneous Developments	140
3.9	Example: Southern Railway System	141
3.10	Example: The Health Examination Survey, Cycle II	145

CHAPTER 4

The Jackknife Method	153
----------------------	-----

4.1	Introduction	153
4.2	Some Basic Infinite Population Methodology	154
4.3	Basic Applications to the Finite Population	164
4.4	Application to Nonlinear Estimators	171
4.5	Usage in Stratified Sampling	174
4.6	Applications to Cluster Sampling	184
4.7	Example: The Methods Test Panel	186
4.8	Example: Estimating the Size of the U.S. Population	195

CHAPTER 5

Generalized Variance Functions	201
--------------------------------	-----

5.1	Introduction	201
5.2	Choice of Model	202
5.3	Grouping Items Prior to Model Estimation	205
5.4	Methods for Fitting the Model	206
5.5	Example: The Current Population Survey	208
5.6	Example: The School Staffing Survey	217

CHAPTER 6

Taylor Series Methods	221
-----------------------	-----

6.1	Introduction	221
6.2	Linear Approximations in the Infinite Population	222
6.3	Linear Approximations in the Finite Population	225
6.4	A Special Case	228
6.5	A Computational Algorithm	229
6.6	Usage with Other Methods	230
6.7	Example: Composite Estimators	231
6.8	Example: Simple Ratios	236
6.9	Example: Difference of Ratios	239
6.10	Example: Exponentials with Application to Geometric Means	242

CHAPTER 7

Variance Estimation for Systematic Sampling	248
---	-----

7.1	Introduction	248
7.2	Alternative Estimators in the Equal Probability Case	249

7.3	Theoretical Properties of the Eight Estimators	258
7.4	An Empirical Comparison	271
7.5	Conclusions in the Equal Probability Case	282
7.6	Unequal Probability Systematic Sampling	283
7.7	Alternative Estimators in the Unequal Probability Case	286
7.8	An Empirical Comparison	290
7.9	Conclusions in the Unequal Probability Case	303
CHAPTER 8		
Summary of Methods for Complex Surveys		306
8.1	Accuracy	307
8.2	Flexibility	317
8.3	Administrative Considerations	317
8.4	Summary	319
APPENDIX A		
Hadamard Matrices		320
APPENDIX B		
Asymptotic Theory of Variance Estimators		353
APPENDIX C		
Transformations		365
APPENDIX D		
The Effect of Measurement Errors on Variance Estimation		380
APPENDIX E		
Computer Software for Variance Estimation		393
References		413
Index		423
