

Contents

Preface	vii
Preface to Volume 1	ix
Contents of Volume 1	xiii
List of Main Notation	xviii
Chapter 9. Multivariate and Multidimensional Processes	654
9.1. Correlation and Spectral Properties of Multivariate Stationary Processes	655
9.2. Linear Relationships	669
9.2.1. Linear relationships with added noise	671
9.2.2. The Box-Jenkins "transfer function" method	676
9.3. Multiple and Partial Coherency	681
9.4. Multivariate AR, MA, and ARMA Models	685
9.5. Estimation of Cross-spectra	692
9.5.1. Estimation of co-spectra and quadrature spectra	701
9.5.2. Estimation of cross-amplitude and phase spectra	702
9.5.3. Estimation of coherency	
9.5.4. Practical considerations: alignment techniques	706
9.6. Numerical Examples	712
9.7. Correlation and Spectral Properties of Multidimensional Processes	718
9.7.1. Two-dimensional mixed spectra	724
Chapter 10. Prediction, Filtering and Control	727
10.1. The Prediction Problem	722
10.1.1. Spectral factorization and linear representations	730
10.1.2. Geometric representation of linear prediction	736

10.1.3.	The Kolmogorov approach	738
10.1.4.	The Wiener approach	748
10.1.5.	The Wold decomposition	755
10.1.6.	Prediction for multivariate processes	760
10.2.	The Box-Jenkins Approach to Forecasting	762
10.3.	The Filtering Problem	773
10.3.1.	The Wiener filter	775
10.4.	Linear Control Systems	780
10.4.1.	Minimum variance control	781
10.4.2.	System identification	786
10.4.3.	Multivariate systems	791
10.4.4.	State space representations	797
10.5.	Multivariate Time Series Model Fitting	800
10.5.1.	Identifiability of multivariate ARMA models	801
10.5.2.	Fitting state space models via canonical correlations analysis	804
10.6.	State Space Approach to Forecasting and Filtering Problems: Kalman Filtering	807
Chapter 11. Non-stationarity and Non-linearity		816
11.1.	Spectral Analysis of Non-stationary Processes: Basic Considerations	817
11.2.	The Theory of Evolutionary Spectra	821
11.2.1.	Estimation of evolutionary spectra	837
11.2.2.	Complex demodulation	848
11.3.	Some Other Definitions of Time-dependent "Spectra"	855
11.4.	Prediction, Filtering and Control for Non-stationary Processes	859
11.5.	General Non-linear Models	866
11.5.1.	Volterra expansions and polyspectra	869
11.6.	Some Special Non-linear Models: Bilinear, Threshold, and Exponential Models	877
