

Contents

Synopsis	1
1 Preliminaries	7
1.1 Some basic definitions	7
1.2 Notions of tractability	12
1.3 An extended model	18
1.4 Counting, generation and self-reducibility	28
1.5 An interesting class of relations	36
2 Markov chains and rapid mixing	42
2.1 The Markov chain approach to generation problems	43
2.2 Conductance and the rate of convergence	46
2.3 A characterisation of rapid mixing	56
3 Direct Applications	63
3.1 Some simple examples	63
3.2 Approximating the permanent	70
3.3 Monomer-dimer systems	85
3.4 Concluding remarks	96
4 Indirect Applications	101
4.1 A robust notion of approximate counting	102
4.2 Self-embeddable relations	112
4.3 Graphs with specified degrees	114

Appendix: Recent developments	126
Bibliography	136
Index	144
