Table of Contents

Foreword		i
Acknowledgments		iii
Preface		v
Introduction		1
Part One: The Logit Model		5
Chapter 1:	A Modified Multiple Regression Approach to the Analysis of Dichotomous Variables	7
Chapter 2:	An Illustrative Comparison of Goodman's Approach to Logit Analysis with Dummy Variable Regression Analysis – Jay Magidson	27
Part Two: The General Log-Linear Model		55
Chapter 3:	A General Model for the Analysis of Surveys	57
Chapter 4:	The Multivariate Analysis of Qualitative Data: Interactions among Multiple Classifications	111
Chapter 5:	The Analysis of Multidimensional Contingency Tables: Stepwise Procedures and Direct Estimation Methods for Building Models for Multiple Classifications	143
Chapter 6:	Causal Analysis of Data from Panel Studies and Other Kinds of Surveys	173
Part Three: Davis on Goodman's Approach		231
Chapter 7:	Hierarchical Models for Significance Tests in Multivariate Contingency Tables: An Exegesis of Goodman's Recent Papers – James A. Davis	233
Part Four: Latent-Structure and Scaling Models		277

Chapter 8: The Analysis of Systems of Qualitative Variables When Some of the Variables Are Unobservable. Part I: A Modified Latent Structure Approach 281

Chapter 9: A New Model for Scaling Response Patterns: An Application of the Quasi-Independence Concept 363

Chapter 10: Exploratory Latent-Structure Analysis Using Both Identifiable and Unidentifiable Models 403

Part Five: Some Extensions to the Goodman System 421

Chapter 11: The Analysis of Multidimensional Contingency Tables When Some Variables Are Posterior to Others: A Modified Path Analysis Approach 423

Chapter 12: Guided and Unguided Methods for the Selection of Models for a Set of T Multidimensional Contingency Tables 437

Appendix: Acquiring Computer Programs 468

Index: 469
